Canadian Technical Report of Fisheries and Aquatic Sciences

Technical reports contain scientific and technical information that contributes to existing knowledge but which is not normally appropriate for primary literature. Technical reports are directed primarily toward a worldwide audience and have an international distribution. No restriction is placed on subject matter and the series reflects the broad interests and policies of Fisheries and Oceans Canada, namely, fisheries and aquatic sciences.

Technical reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Technical reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Numbers 1-456 in this series were issued as Technical Reports of the Fisheries Research Board of Canada. Numbers 457-714 were issued as Department of the Environment, Fisheries and Marine Service, Research and Development Directorate Technical Reports. Numbers 715-924 were issued as Department of Fisheries and Environment, Fisheries and Marine Service Technical Reports. The current series name was changed with report number 925.

Rapport technique canadien des sciences halieutiques et aquatiques

Les rapports techniques contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui ne sont pas normalement appropriés pour la publication dans un journal scientifique. Les rapports techniques sont destinés essentiellement à un public international et ils sont distribués à cet échelon. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques de Pêches et Océans Canada, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports techniques peuvent être cités comme des publications à part entière. Le titre exact figure au-dessus du résumé de chaque rapport. Les rapports techniques sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports techniques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre.

Les numéros 1 à 456 de cette série ont été publiés à titre de Rapports techniques de l'Office des recherches sur les pêcheries du Canada. Les numéros 457 à 714 sont parus à titre de Rapports techniques de la Direction générale de la recherche et du développement, Service des pêches et de la mer, ministère de l'Environnement. Les numéros 715 à 924 ont été publiés à titre de Rapports techniques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 925.

ABSTRACT

Ricard, D., Emberley, J., Gomez, C. and Regnier-McKellar, C. 2021. Marine Fish and Invertebrate Atlas: Summarizing Geographic Distribution, Population Indices and Environmental Preferences in the Scotian Shelf and Bay of Fundy (1970-2020). Can. Tech. Rep. Fish. Aquat. Sci. nnn: x + 184 p.

The summer groundfish research vessel survey on the Scotian Shelf and in the Bay of Fundy started in 1970 and was designed to measure the distribution and abundance of major commercial fish species. Over time, additional information on non-commercial species was collected, and allowed considerable insight into ecosystem function and structure, as documented in many primary publications whose analyses used the survey data. The same groundfish survey database has also been used to produce species status reports, atlases of species distribution and remains an essential source of information for stock assessments in the Maritimes Region of Fisheries and Oceans Canada. This report builds on previous work and former atlases by updating a comprehensive suite of indices to assess population status and environmental preferences of 104 species. For each species, trends in geographic distribution and biomass or abundance were plotted. The spatial extent of distribution was plotted over time to gauge how the area occupied has changed. The relationship between abundance or biomass and spatial extent reflected whether the species distribution expands when abundance or biomass increases. Length frequencies over time depicted any changes in mean size. The plots of condition over time revealed whether individual fish are fatter or thinner than their long term mean. Depth, temperature and salinity preferences were estimated to gauge the range of suitable environmental parameters for each species. Finally, for each stratum, the slope describing how local density varies with regional abundance was estimated.

RÉSUMÉ

Ricard, D., Emberley, J., Gomez, C. and Regnier-McKellar, C. 2021. Marine Fish and Invertebrate Atlas: Summarizing Geographic Distribution, Population Indices and Environmental Preferences in the Scotian Shelf and Bay of Fundy (1970-2020). Can. Tech. Rep. Fish. Aquat. Sci. nnn: x + 184 p.

1 Introduction

The summer (July-August) groundfish research vessel survey on the Scotian Shelf and in the Bay of Fundy was started in 1970 by Fisheries and Oceans Canada Maritimes Region. The survey was originally designed to measure the distribution and abundance of major commercial fish species. Over time, information on non-commercial species was also collected. The groundfish survey database storing the information collected during the annual survey provides the main source of fisheries-independent information for marine species in the region. This information is routinely used to support stock assessments, to produce species status reports and has been previously used to publish atlases of species distribution.

The current document is an update of an earlier report (Ricard and Shackell 2013) that built on former atlases by updating a comprehensive suite of derived indices for 104 species to assess population status and environmental preferences. The information collected during the survey is stored in a relational database management system archived at Fisheries and Oceans Canada Maritimes Region which contains detailed information about the sampling locations and the associated catch. Tow-level survey data is also publicly available from the Ocean Biogeographic Information System (DFO 2016) and ([FGP link TBA](#)). The present atlas follows on the work done by Fisheries and Oceans colleagues from the northern Gulf of St. Lawrence (Bourdages and Ouellet 2012), southern Gulf of St. Lawrence (Benoît et al. 2003) and on earlier work in the Scotian Shelf (Simon and Comeau 1994; Horsman and Shackell 2009).

To facilitate updates and foster collaboration on the analyses of the survey data, the computer code necessary to extract the data, to perform the analyses presented herein, and to reproduce and update the current document is made available in a git repository (Ricard and Gomez 2021).

The survey area covers three major Northwest Atlantic Fisheries Organization (NAFO) zones that divide the shelf into the colder east 4V and 4W (strata 440-466) and warmer west 4X (strata 470-495). Temporal trends are plotted by NAFO regions for several species. For each species, trends in geographic distribution and biomass or abundance are plotted. Some caution is required in interpreting the results obtained for several taxa due to low sample size as explained later in the text. The spatial extent of distribution is plotted over time to gauge how the area occupied has changed. The relationship between biomass and spatial extent reflects whether the species distribution expands when biomass increases. For each strata, the slope describing how local density varies with regional abundance was estimated (Myers and Stokes 1989). These slopes were then plotted against a habitat suitability index to identify important strata for each species. Then, length frequencies over time depicted any changes in mean size. The plots of condition over time revealed whether individual fish are fatter or thinner than their long term mean. Finally, depth, temperature and salinity preferences were estimated to gauge the range of environmental parameters (Perry and Smith 1994). A full ecological interpretation of trends is beyond the scope of this report. Other documents stemming from peer-reviewed scientific processes under the auspices of the [Canadian Science Advisory Secretariat](#) (CSAS) provide further descriptions of spatio-temporal trends in different indicators and put the information collected during the summer groundfish research vessel survey in a more focused context (see for example Clark and Emberley (2011)).

2 Methods

2.1 Survey Description

The survey is conducted annually in July-August and covers the Scotian Shelf and the Bay of Fundy (Figure 1). It normally involves two separate two-week trips on board an offshore fisheries vessel from the Canadian Coast Guard.

A number of changes in fishing gear type and vessels used occurred since the onset of sampling activities (Clark and Emberley 2011).

Figure 1. Map of the Scotian Shelf and Bay of Fundy.

2.2 Sampling Design

The summer survey covers divisions 4V, 4W and 4X of the Northwest Atlantic Fisheries Organization (NAFO) which includes the Scotian Shelf and the Bay of Fundy. The eastern limit of the survey is the Laurentian Channel and the western limit is the Fundian Channel (Figure 1).

The survey follows a stratified random design (Doubleday and Rivard 1981; Lohr 1999) (Figure 2). The number of tows conducted in each stratum is approximately proportional to its surface area.

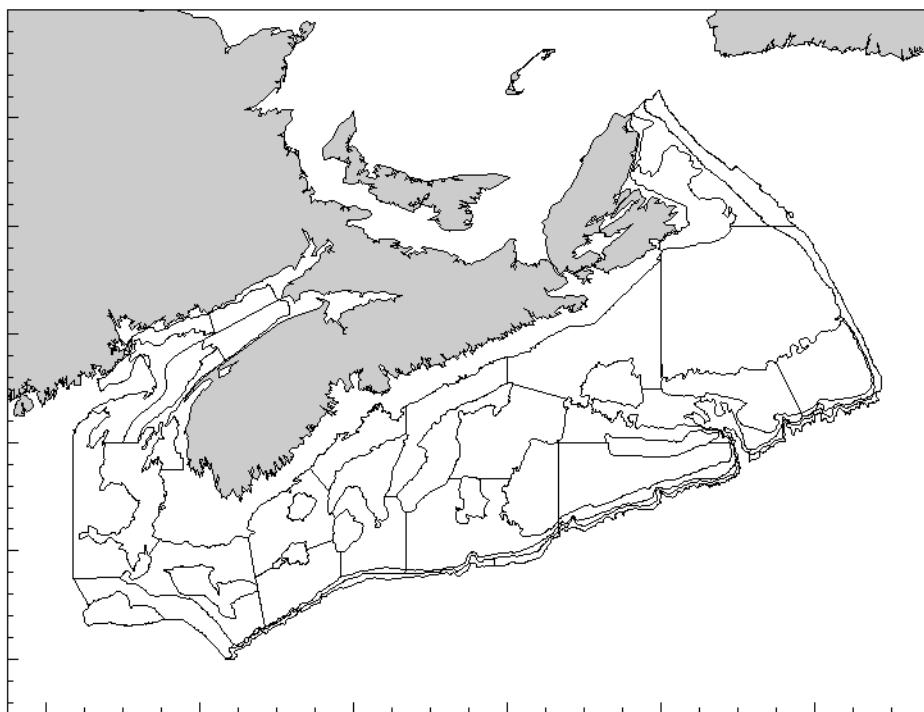

Figure 2. Map of the Summer survey strata.

The basic sampling unit of the survey is a 30-minute fishing tow conducted at a speed of 3.5 knots. This yields a distance towed of 1.75 nautical miles.

After each tow the catch is sorted by species and weighed. Each fish caught is then measured, and further sampling of individual fish weight, maturity status and age are performed for different length classes. When catches exceed 300 individuals, a random sub-sample is used to obtain the length and weight measurements.

The location of representative tows appears in Figure 3.

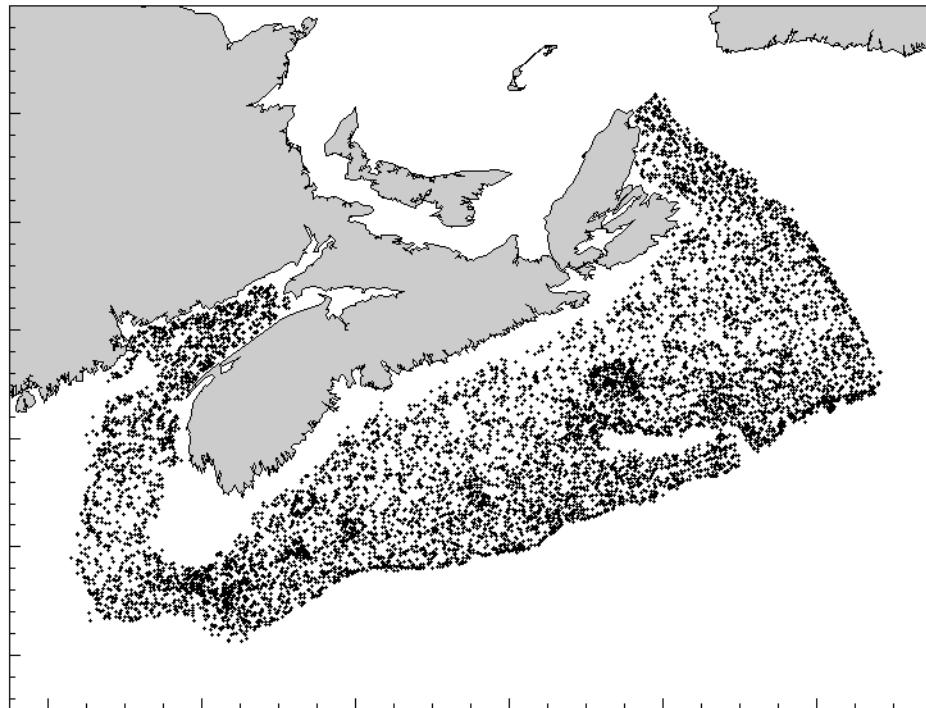

Figure 3. Map of the Summer survey tows.

2.3 Taxonomic Levels

Fish species caught during the surveys are identified by trained scientific personnel and their scientific name is determined. An internal species code used in the relational database is reported for each species (Losier and Waite 1989).

By its nature as a bottom trawl, the fishing gear used in the survey catches certain species better than others. To ensure that meaningful ecological information can be extracted from catch samples, we report the catch records for the subset of species that are caught reliably by the gear. To appear in this atlas, a species must have had a minimum of 10 observations over the duration of the survey activities. While both catch abundance and weight are recorded, the weight of species that appear at low abundances is often recorded as zero in the earlier parts of the survey when scales of appropriate precision were not available.

We divided the species caught into five categories based on 1) their taxonomic classification, 2) the number of recorded observations, and 3) their period of valid identification (Table 1). Category "LF", for "long frequent", was assigned to species that have more than 1000 records since 1970 and have been consistently identified since the onset of the survey. Category "LI", for "long intermediate", was assigned to species that had between 1000 and 200 catch records. Rare and elusive species (those with less than 200 catch records over the duration of the survey) are also reported but to a lower level of analytical details (Category "LR", for "long rare"). Category "SF", for "short frequent", was assigned to invertebrate species that were consistently sampled only since 1999 (Tremblay M. J. 2007). And category "SR", for "short rare" for invertebrate species consistently sampled only since 1999 and with less than 200 catch records. The list of taxa covered in this document is presented in phylogenetic order (Nelson J. S. et al. 2004) in Table 2. To ensure concordance with authoritative taxonomic information, the AphiaID from the World Register of Marine Species is also provided in Table 2 (Appeltans et al. 2012).

Category	Name	Description
L	long - consistently identified since the onset of the survey in 1970	
LF	long frequent	species that have more than 1000 catch records
LI	long intermediate	species that had between 1000 and 200 catch records
LR	long rare	species with less than 200 catch records
S	short - invertebrate species that were consistently sampled only since 1999	
SF	short frequent	species with more than 200 catch records
SR	short rare	species with less than 200 catch records

Table 1. Taxonomic levels

Table 2. List of species included in the Atlas. The species reported here are listed in phylogenetic order as per Page L. M. et al. (2013). For each taxonomic order and class, each species is listed in the table, its taxonomic family and scientific name is provided, along with its French and English common names, the species code used in the survey database, its AphiaID and a link to the World Registry of Marine Species, its number of catch records in the survey database and its classification category as defined in section 2.3.

2.4 Analyses

The Oracle relational database where all data are stored was accessible from the Bedford Institute of Oceanography in Dartmouth, Nova Scotia. Structured Query Language (SQL) is used to extract the data from the production server and to create the data products used in all subsequent analyses. Catch records classified as "valid" (i.e. a representative tow without damage to the net) are used in the current analyses. To make the available samples comparable, catch number and weight for each species was standardized for the distance towed.

All data processing and analyses were conducted using the R software (R Core Team 2020) using packages gstat (Pebesma 2004), PBSmapping (Schnute et al. 2019), RODBC (Ripley and Lapsley 2019), spatstat (Baddeley 2015), maptools (Bivand and Lewin-Koh 2020), rgeos (Bivand and Rundel 2020), classInt(Bivand 2020), RColorBrewer(Neuwirth 2014), MASS (Ripley et al. 2020), worms (Holstein 2018), and tidyverse (Wickham 2019). The present document is rendered as a Technical Report using the csasdown R package developed and maintained by Fisheries and Oceans Canada scientists (Anderson et al. In press).

2.4.1 Geographic distribution of catches

Spatial interpolation of catch biomass (kg/tow) or abundance (number/tow) was done using a weighting inversely proportional to the distance, using function "idw" of the spatstat R package (Baddeley 2015).

2.4.2 Abundance and biomass indices

For each species, stratified random estimates of catch abundance and biomass (Smith 1996) were computed for each year. Yearly estimates of the standard error were also computed.

2.4.3 Distribution indices

For each Category L, I and S fish species, the minimum area required to account for 75% and 95% of the total biomass or abundance were computed (D75% and D95%). These measures of distributions were computed for each year by using the Lorenz curve of mean stratum-level catch estimates and the area of occupied strata (Swain and Sinclair 1994; Swain and Morin 1996).

2.4.4 Length frequencies

The length frequency distribution of catch is tabulated for each seven-year period (1970-2009), and last ten-year period (2010-2020).

2.4.5 Length-weight relationship and condition factor

The relationship between the weight and the length of fish was estimated using the following non-linear isometric relationship:

$$W = \alpha L^\beta$$

where W is the total weight (g), L is the length (cm), and, α and β are the parameters to be estimated.

Average fish condition (C) was computed as:

$$C = \frac{W}{\alpha L^\beta}$$

2.4.6 Depth, temperature and salinity distribution of catches

For each category L species, We followed the methods developed by (Perry and Smith 1994) and generated cumulative frequency distributions of depth, temperature and salinity of survey catches.

2.4.7 Density-dependent habitat selection

We followed the methods of (Myers and Stokes 1989) to evaluate how fish abundance in each stratum varied with overall temporal fluctuations of population abundance.

For each category L species, we fitted a model of the relationship between stratum-level density and overall abundance (the yearly stratified random estimate of abundance, defined above). To properly use the observations of zero catch while accounting for the logarithmic distribution of catch abundance, we implemented the model as a generalised linear using a log link and a Poisson error distribution:

$$Y_{h,i} = \alpha_{h,i} Y_i^{\beta_{h,i}}$$

where, $y_{h,i}$ is the average abundance of stratum h in year i , and $\alpha_{h,i}$ and $\beta_{h,i}$ are the fitted parameters. The estimated parameter $\beta_{h,i}$ is referred to as the “slope parameter” and indicates whether stratum-level density is positively ($\beta_{h,i} <= 0$), negatively ($\beta_{h,i} >= 0$) or negligibly ($\beta_{h,i} \approx 0$) related to population abundance.

To estimate the suitability of each stratum, the median abundance observed during the years that are in the top 25% of yearly estimates is used. We combine the slope parameter estimates from the above model with the median abundance to identify strata that have consistently high abundance and whose local density is weakly related to fluctuation in population abundance ($\beta_{h,i} \approx 0$). Preferred strata are identified for each category L species.

3 Results

The plots generated for each species are presented in the Appendix.

3.1 Description of Figures

3.1.1 Type A

For Category L and S species:

Spatial distribution of catch-per unit of effort, (CPUE, kilograms per tow) in July-August for the Bay of Fundy and Scotian Shelf in five-year periods. Spatial interpolation between tows was done using Inverse Distance Weight (IDW). The probability of occurrence (proportion of tows with catch records for a given species) was also reported for each five-year period.

For Category LR and SR:

Location of tows with catch over the period 1970-2012 (Type LR) or the period 1999-2012 (Type SR). Location of tows with catch over the period 1970-2012 (Type LR) or the period 1999-2012 (Type SR).

3.1.2 Type B

For Category L, S and I species:

Stratified random estimate of CPUE (left panel), distribution indices (D75% and D95%, the minimum area containing 75% and 95% of biomass, middle panel), and distribution vs. weight per tow (right panel). The stratified random mean is plotted as a solid line with the 95% confidence region indicated by the solid grey line. The overall mean is plotted as a grey horizontal line and the overall mean plus or minus 50% of the standard deviation appear as horizontal dashed lines. In all three panels, the early years appear in blue and the last years appear in red. The predictions from a loess estimator are overlaid on the distribution indices (middle panel). The Pearson correlation coefficient between D75% and biomass, and its statistical significance, are also reported in the right panel.

3.1.3 Type C.

Length frequency distribution for NAFO divisions 4X and 4VW. A smoothed length frequency distribution is shown for each 7-year periods covered by the surveys.

3.1.4 Type D.

Average fish condition for all fish lengths (black dots and black line), large fish (thick gray line), and small fish (thin gray line). Fish condition is presented for NAFO divisions 4VW (right panel) and 4X (left panel).

3.1.5 Type E.

Cumulative frequency distributions of depth, temperature and salinity at all sampled locations (thick solid line) and at fishing locations with catch records (thin dashed line). The depth, temperature and salinity associated with 5%, 25%, 50%, 75% and 95% of the cumulative catch is shown in tabular fashion on the bottom right panel.

3.1.6 Type F.

Slopes estimates from the density-dependent habitat selection model (y axis) plotted versus the median abundance during the top 25% of years. The red box indicates strata of particular importance for a species by identifying slopes that are within a standard error from zero and that are within the top 25% of median abundance. Each stratum is identified on the plot by the last two digits of its number.

3.2 Summary of successful tows by year and stratum

There is something weird going on here, there are 2 tows with NAs for stratum, (HAM1980042 set 62 and HAM1982072 set 13).

<!-- Number of tows by stratum-year -->

Table 3. Number of representative tows conducted in each stratum during the period 1970 to 1991.

		171809.888	196	212	214	208	81	227	175	9080

A total of 9080 representative tows were conducted for the period spanning from 1970 to 2020.

4 Discussion

The current document is not meant to replace stock assessments, species-specific analyses of abundance, biomass and distribution, or any targeted attempts to integrate information about species or group of species from the wide and disparate sources of data about marine organisms in the area covered by the DFO Maritimes summer trawl survey. It is rather meant to provide a reproducible set of tools to extract and visualise the information collected in the DFO Maritimes summer trawl survey.

It is hoped that this document can provide a stepping stone to conduct other ecological analyses using the trawl survey data.

5 Acknowledgements

We thank all the dedicated personnel involved in running trawl surveys in the Maritimes Region.

7 Appendix

7.1 Atlantic cod (*Morue franche*) - species code 10 (category LF)

Scientific name: [Gadus morhua](#)

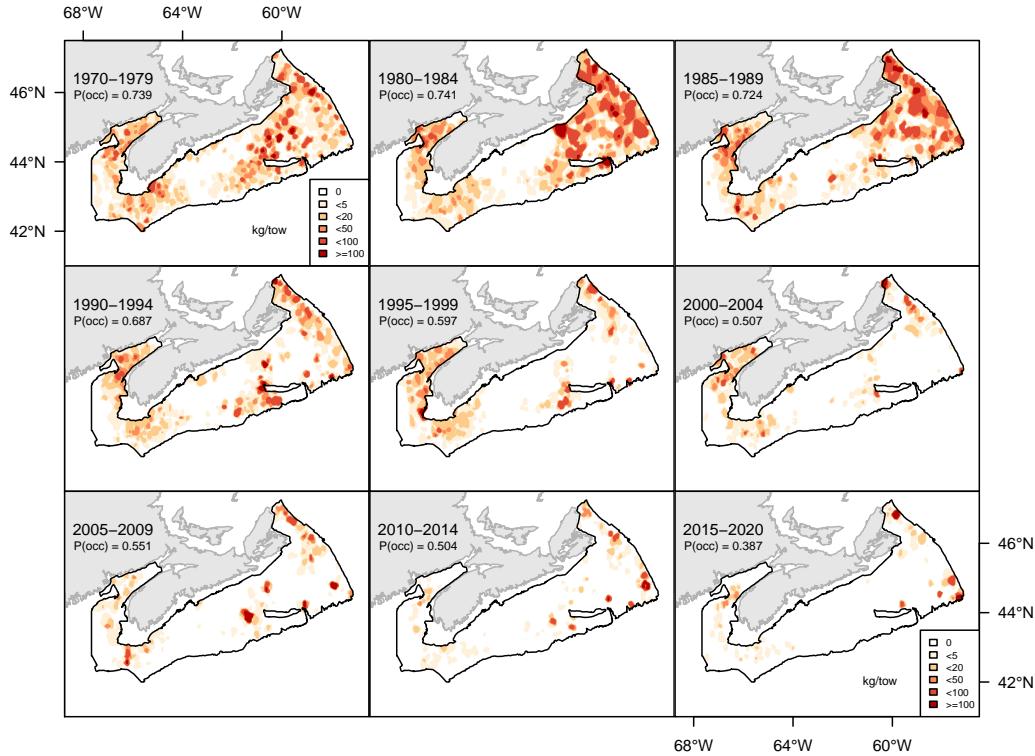

Figure 7.1A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic cod.

Figure 7.1B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic cod.

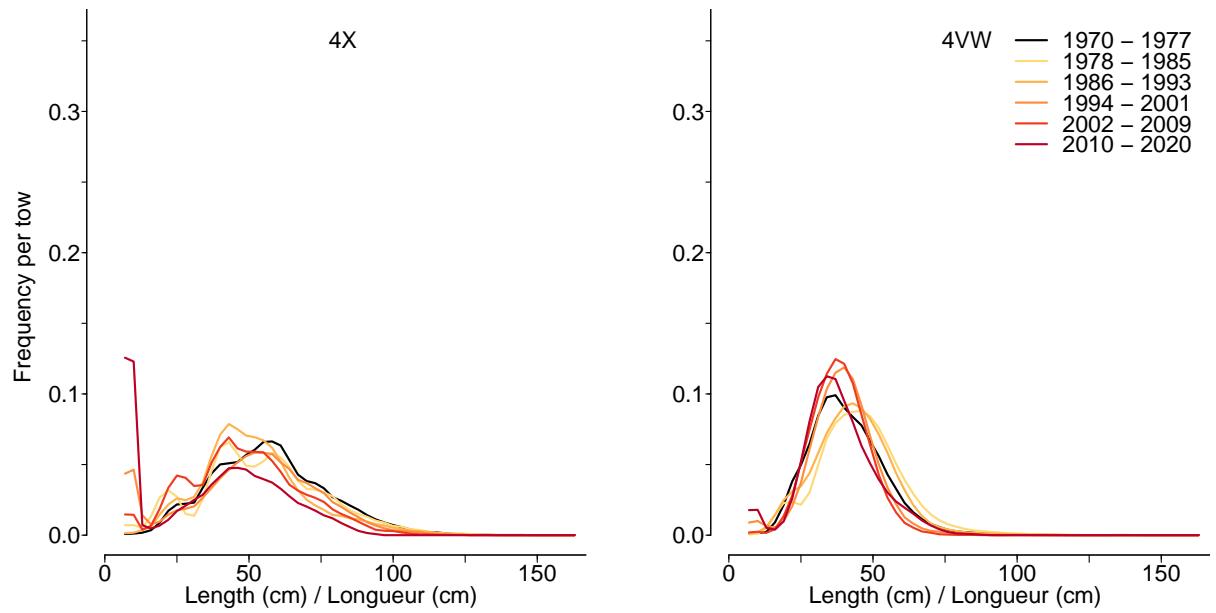

Figure 7.1C. Length frequency distribution in NAFO units 4X and 4VW for Atlantic cod.

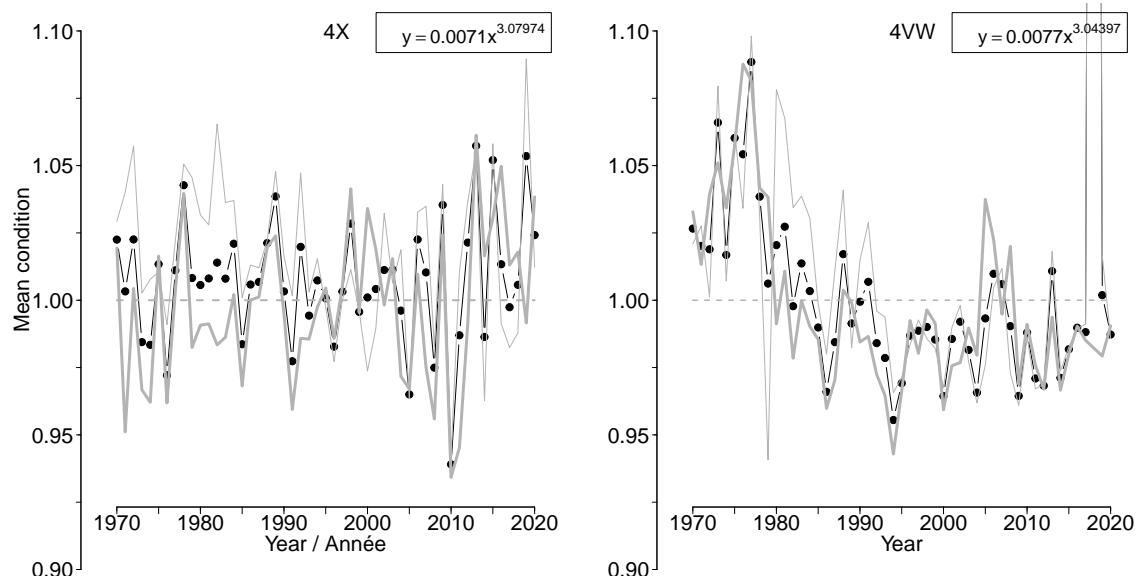

Figure 7.1D. Average fish condition in NAFO units 4X and 4VW for Atlantic cod.

Figure 7.1E. Catch distribution by depth, temperature and salinity of Atlantic cod.

Figure 7.1F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Atlantic cod.

7.2 Haddock (Aiglefin) - species code 11 (category LF)

Scientific name: [Melanogrammus aeglefinus](#)

Figure 7.2A. Inverse distance weighted distribution of catch biomass (kg/tow) for Haddock.

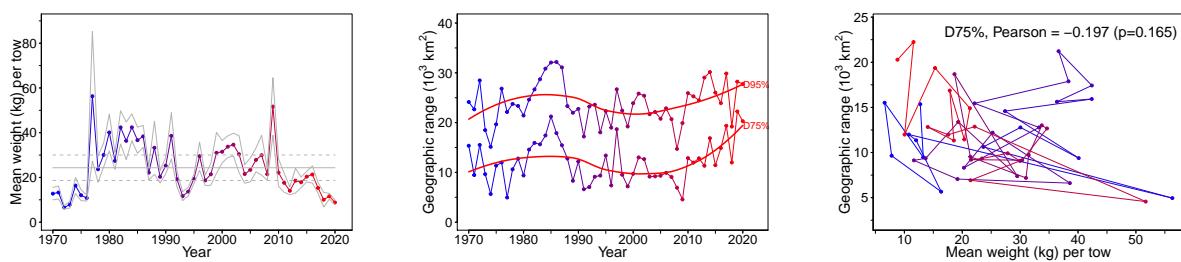

Figure 7.2B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Haddock.

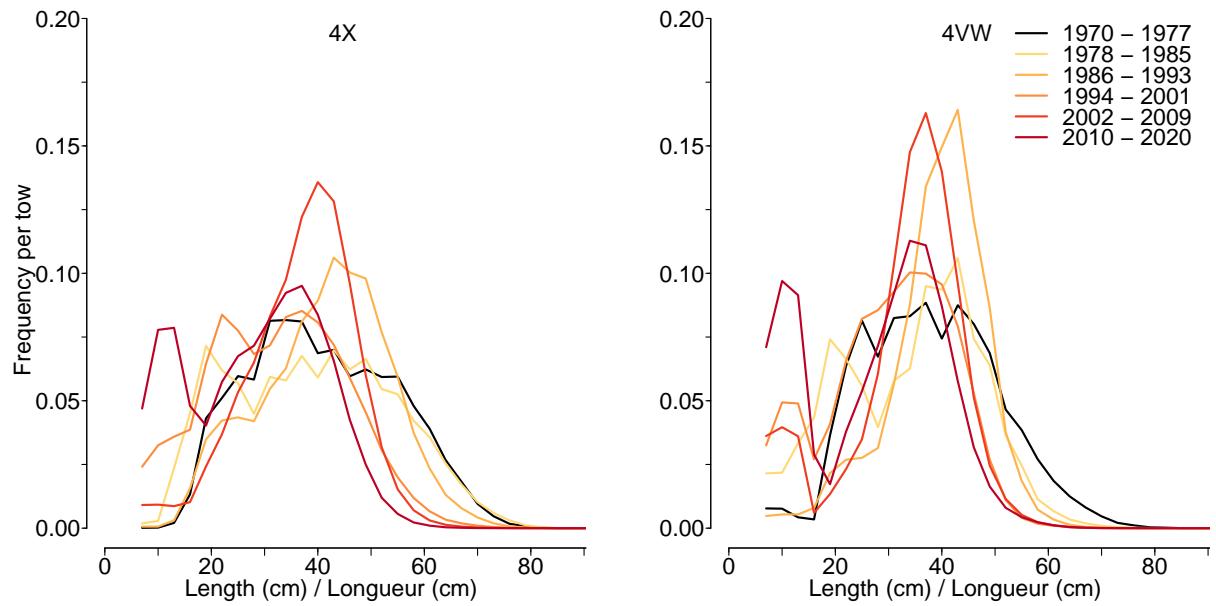

Figure 7.2C. Length frequency distribution in NAFO units 4X and 4VW for Haddock.

Figure 7.2D. Average fish condition in NAFO units 4X and 4VW for Haddock.

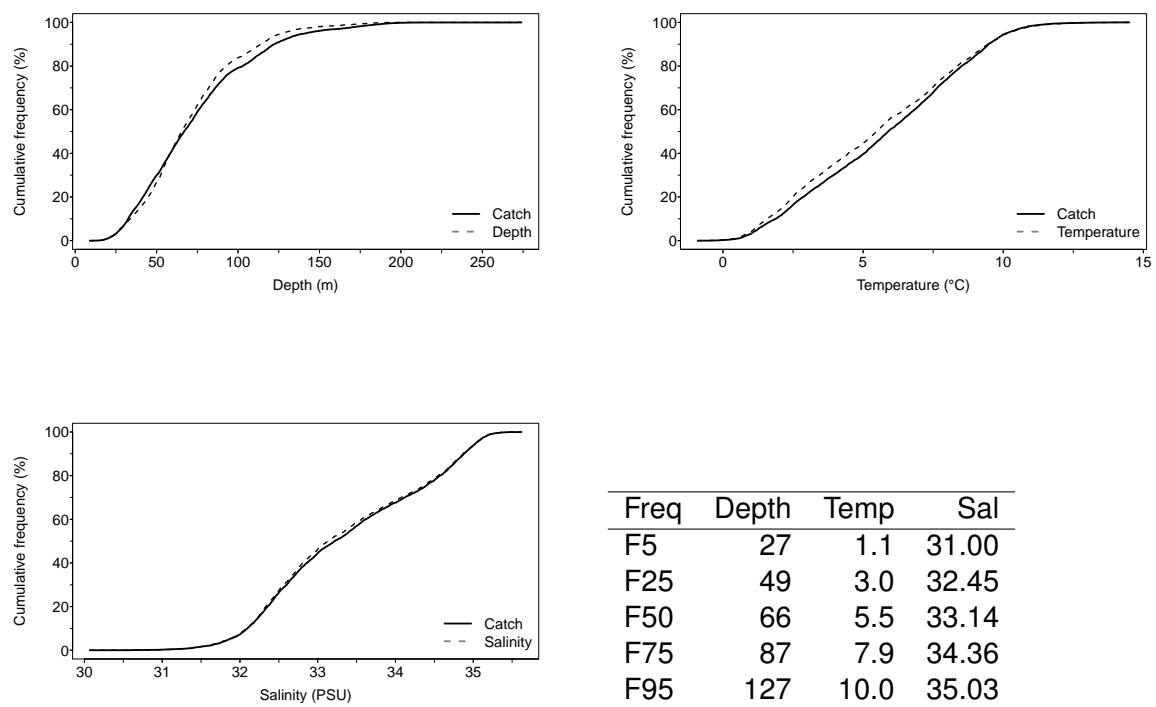

Figure 7.2E. Catch distribution by depth, temperature and salinity of Haddock.

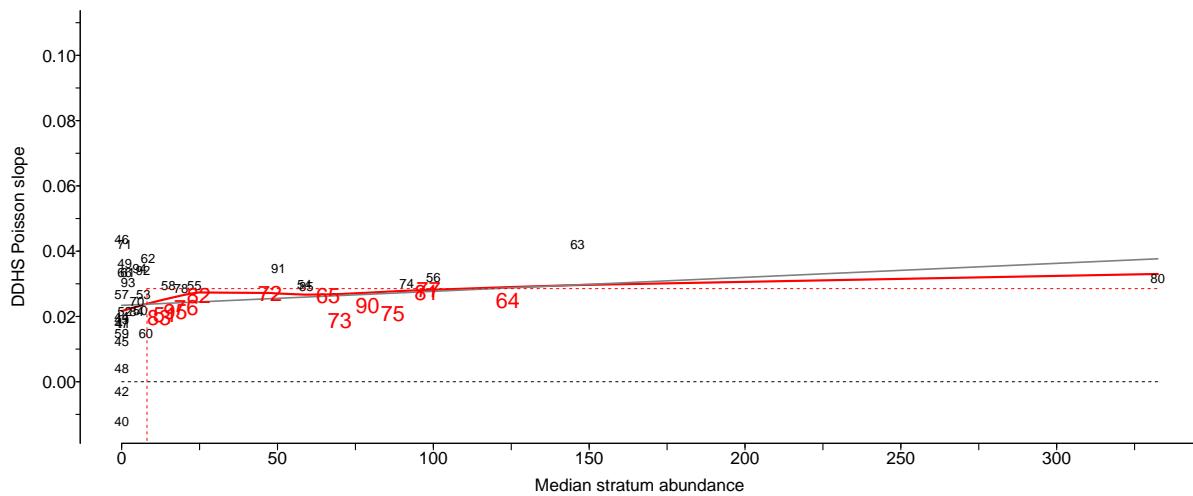

Figure 7.2F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Haddock.

7.3 White hake (Merluche blanche) - species code 12 (category LF)

Scientific name: [Urophycis tenuis](#)

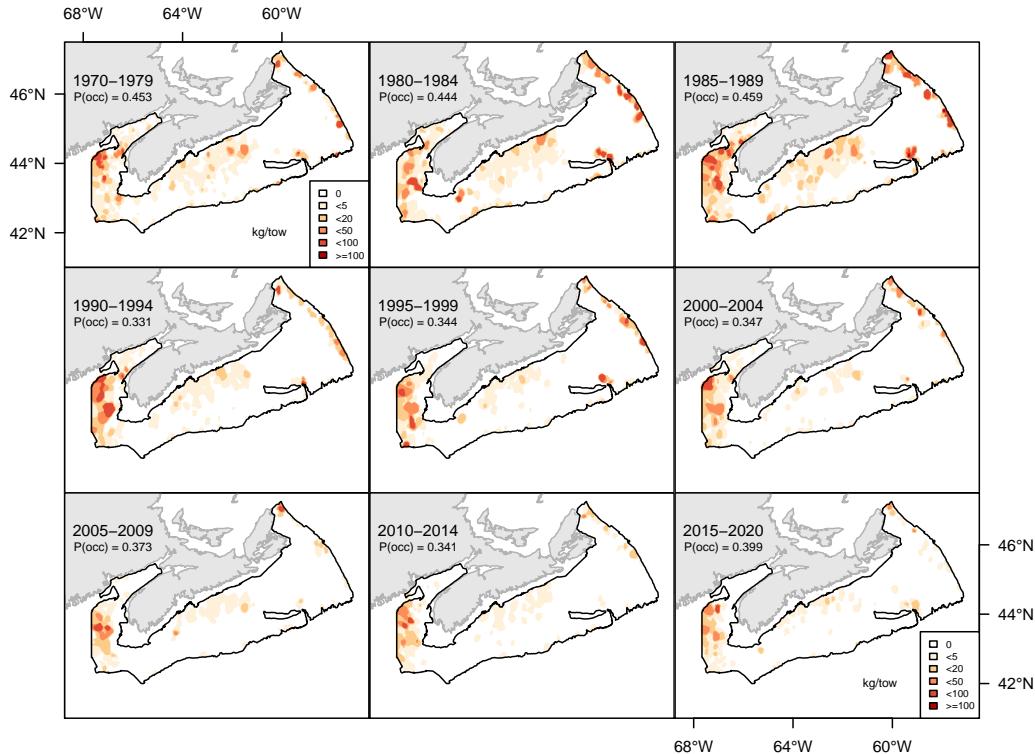

Figure 7.3A. Inverse distance weighted distribution of catch biomass (kg/tow) for White hake.

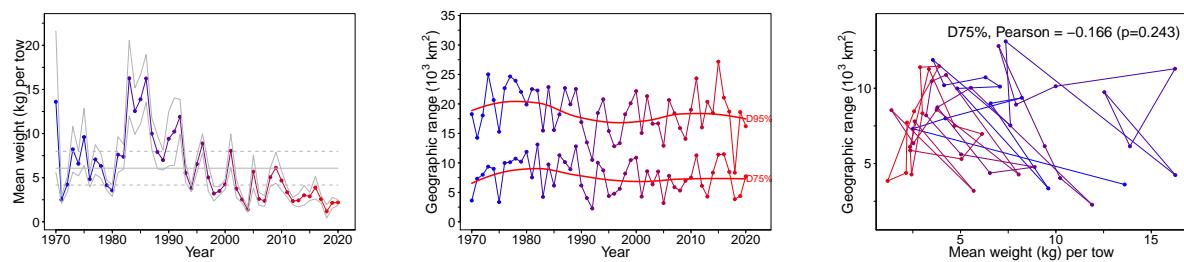

Figure 7.3B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of White hake.

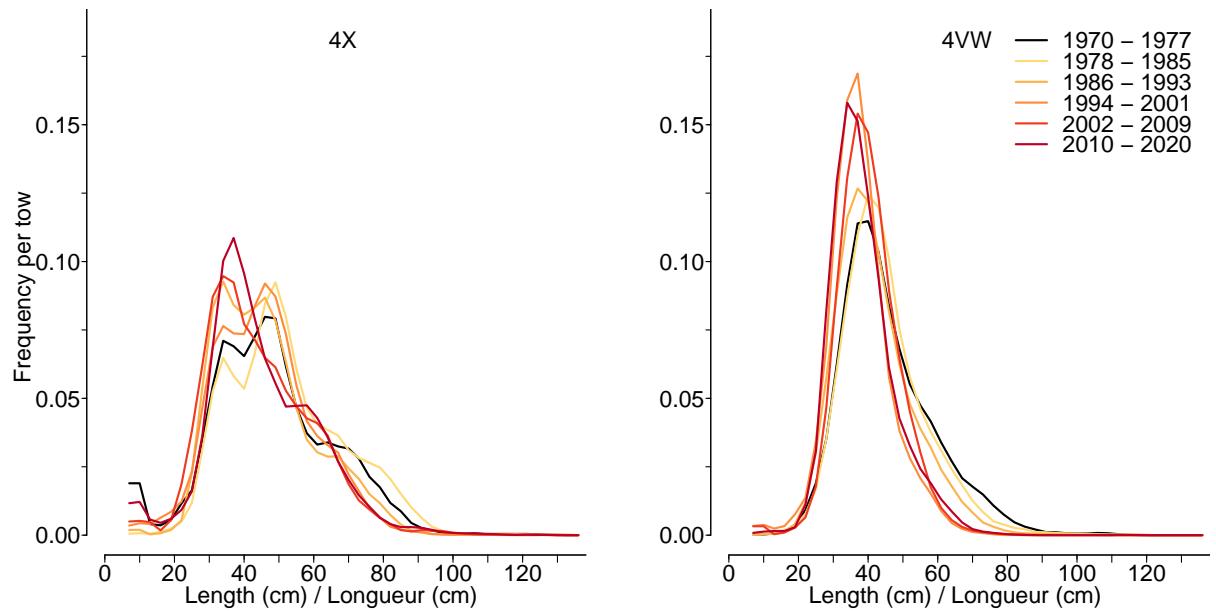

Figure 7.3C. Length frequency distribution in NAFO units 4X and 4VW for White hake.

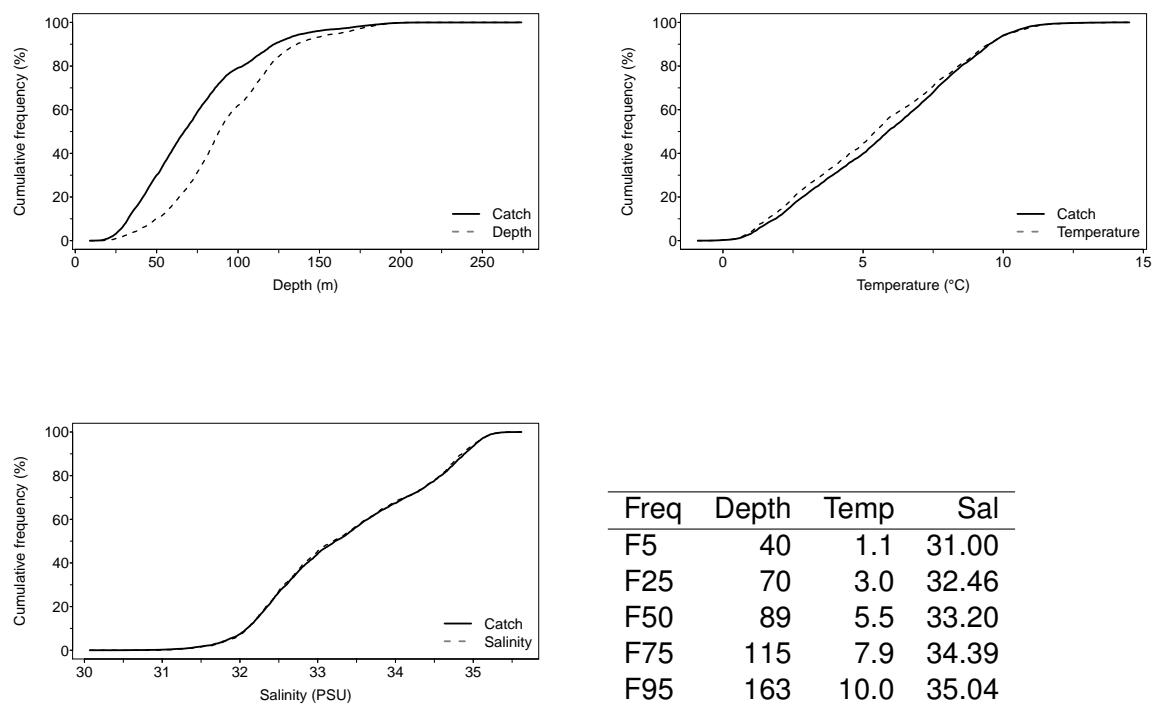

Figure 7.3D. Average fish condition in NAFO units 4X and 4VW for White hake.

Freq	Depth	Temp	Sal
F5	40	1.1	31.00
F25	70	3.0	32.46
F50	89	5.5	33.20
F75	115	7.9	34.39
F95	163	10.0	35.04

Figure 7.3E. Catch distribution by depth, temperature and salinity of White hake.

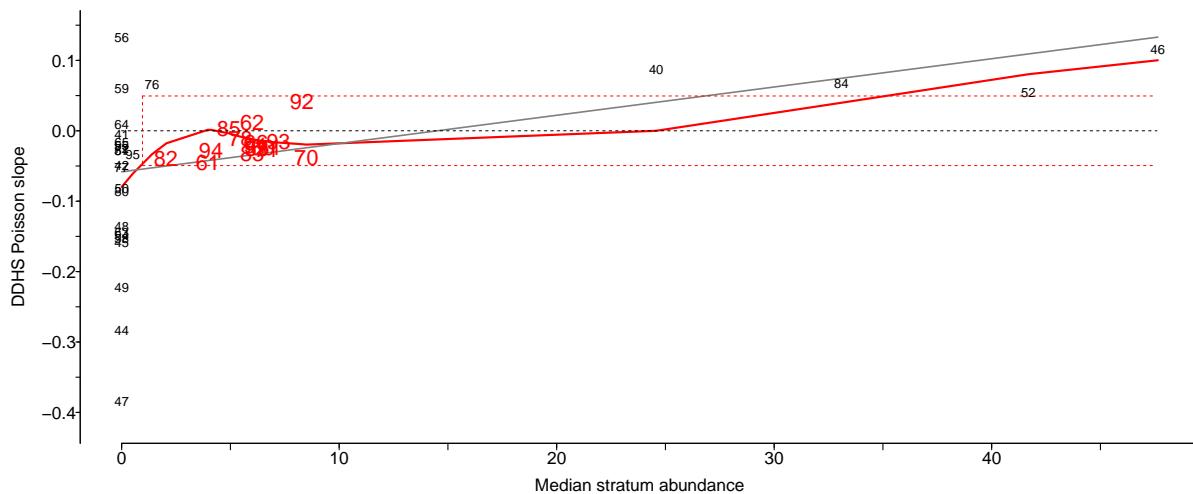

Figure 7.3F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for White hake.

7.4 Red hake (Merluche écureuil) - species code 13 (category LF)

Scientific name: [Urophycis chuss](#)

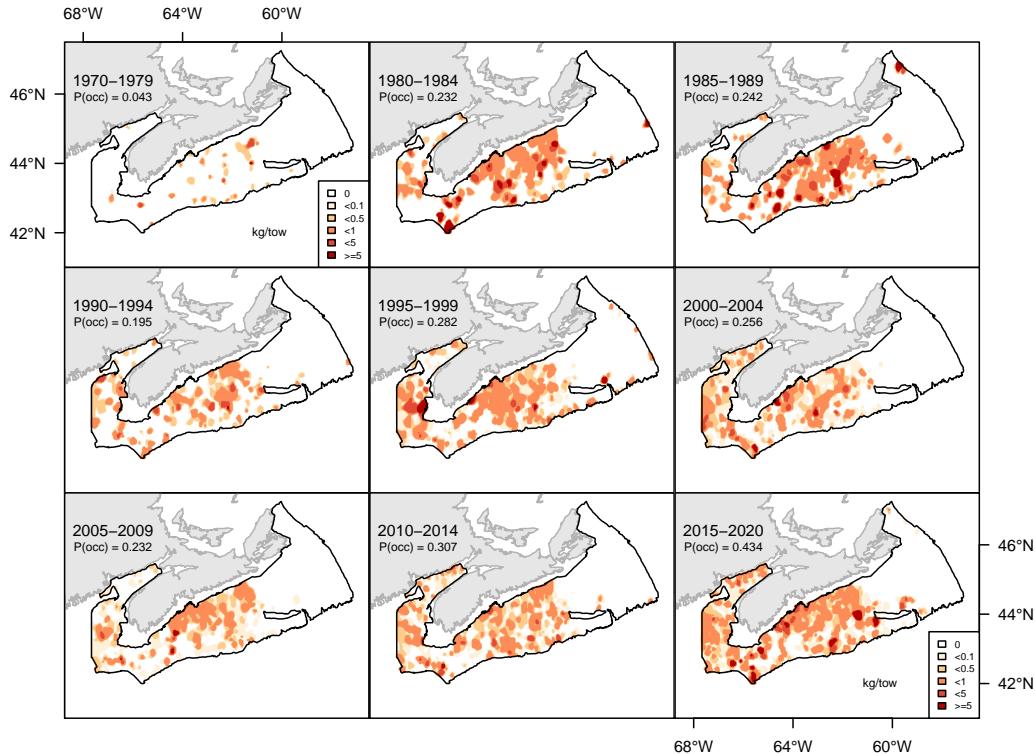

Figure 7.4A. Inverse distance weighted distribution of catch biomass (kg/tow) for Red hake.

Figure 7.4B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Red hake.

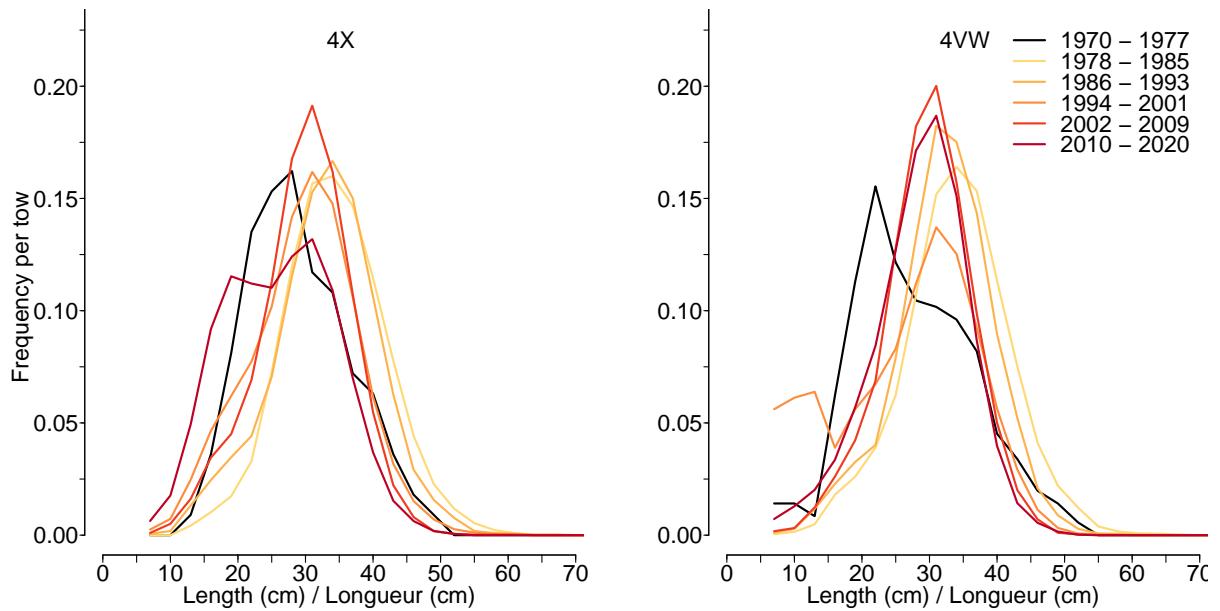

Figure 7.4C. Length frequency distribution in NAFO units 4X and 4VW for Red hake.

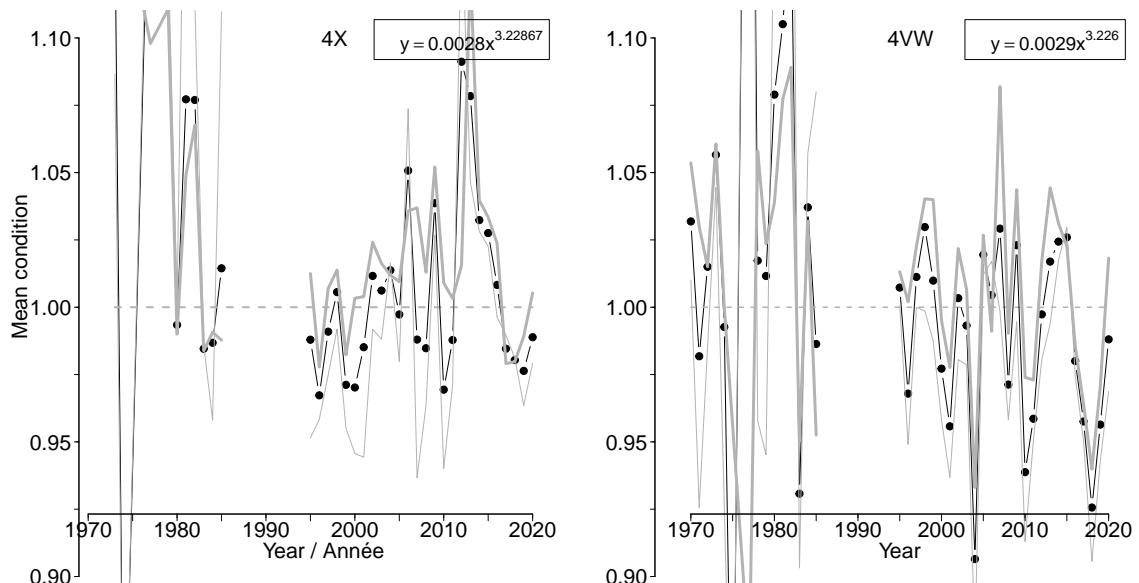

Figure 7.4D. Average fish condition in NAFO units 4X and 4VW for Red hake.

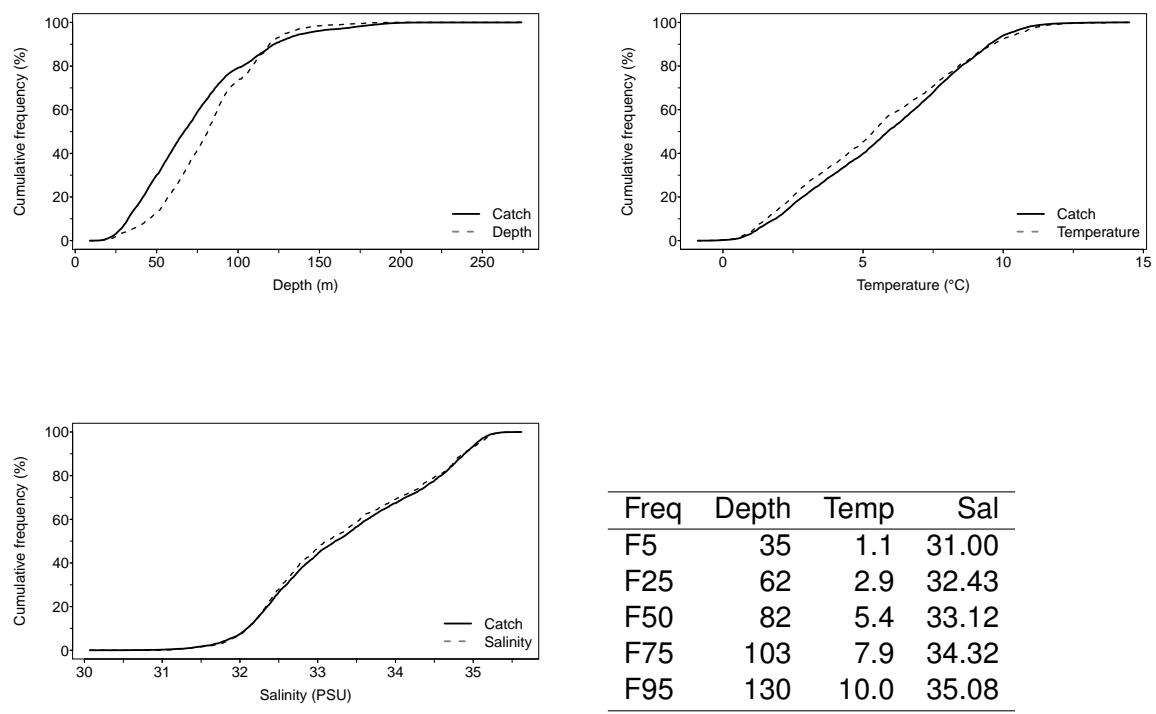

Figure 7.4E. Catch distribution by depth, temperature and salinity of Red hake.

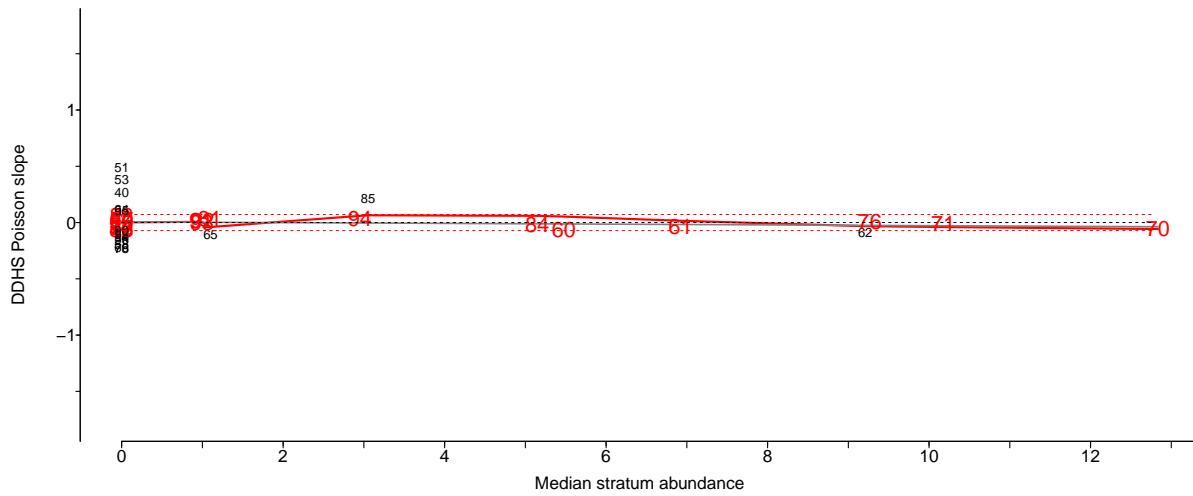

Figure 7.4F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Red hake.

7.5 Silver hake (*Merlu argenté*) - species code 14 (category LF)

Scientific name: [Merluccius bilinearis](#)

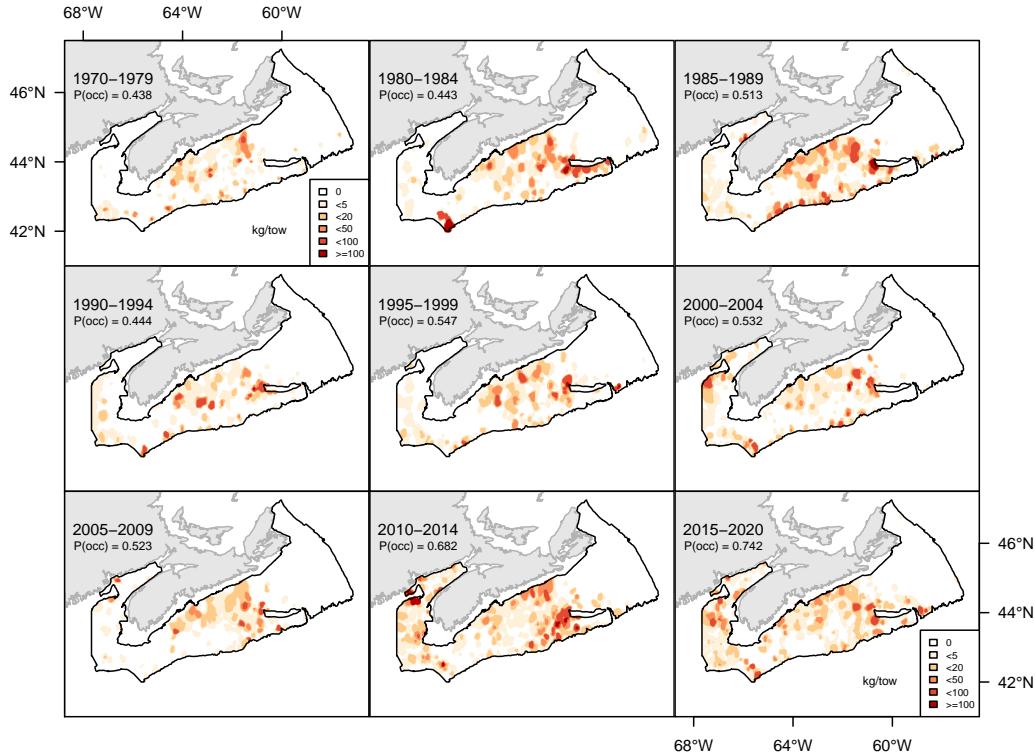

Figure 7.5A. Inverse distance weighted distribution of catch biomass (kg/tow) for Silver hake.

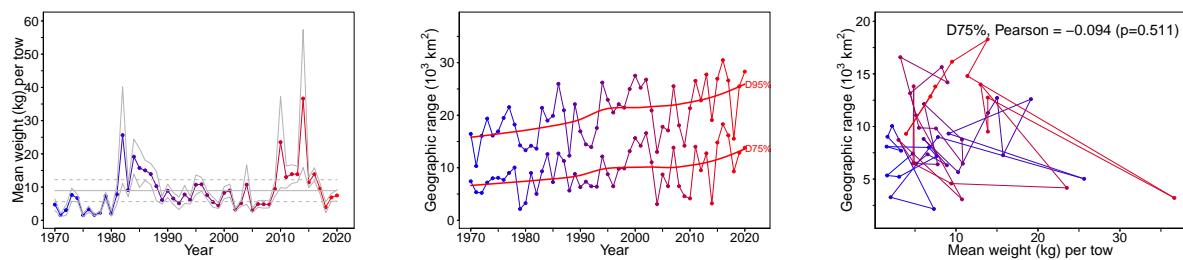

Figure 7.5B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Silver hake.

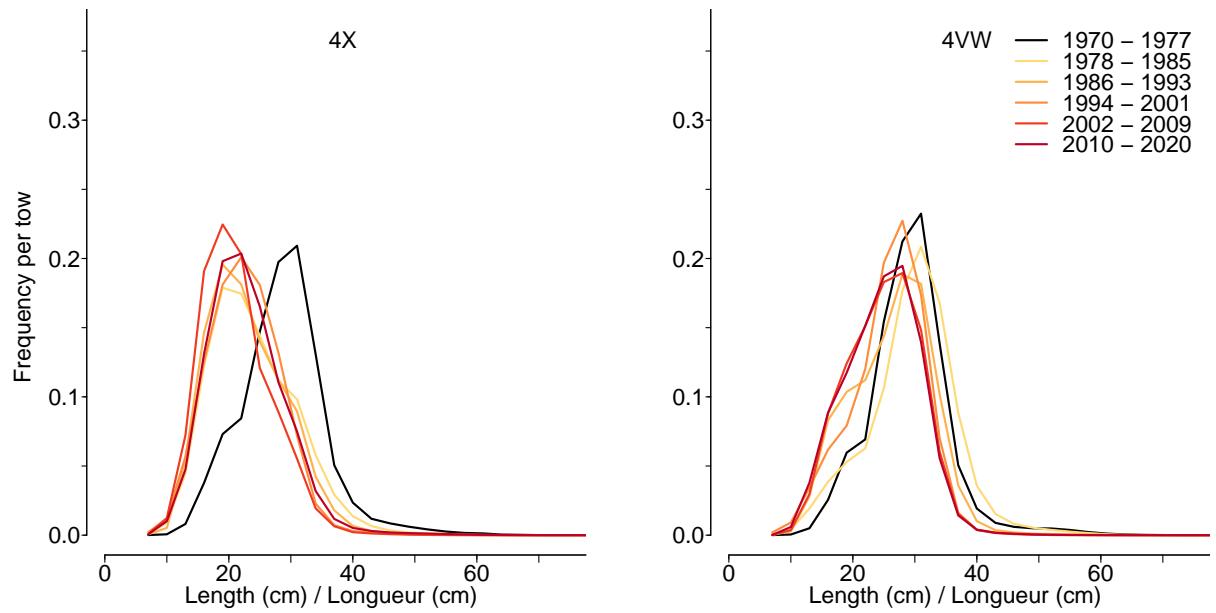

Figure 7.5C. Length frequency distribution in NAFO units 4X and 4VW for Silver hake.

Figure 7.5D. Average fish condition in NAFO units 4X and 4VW for Silver hake.

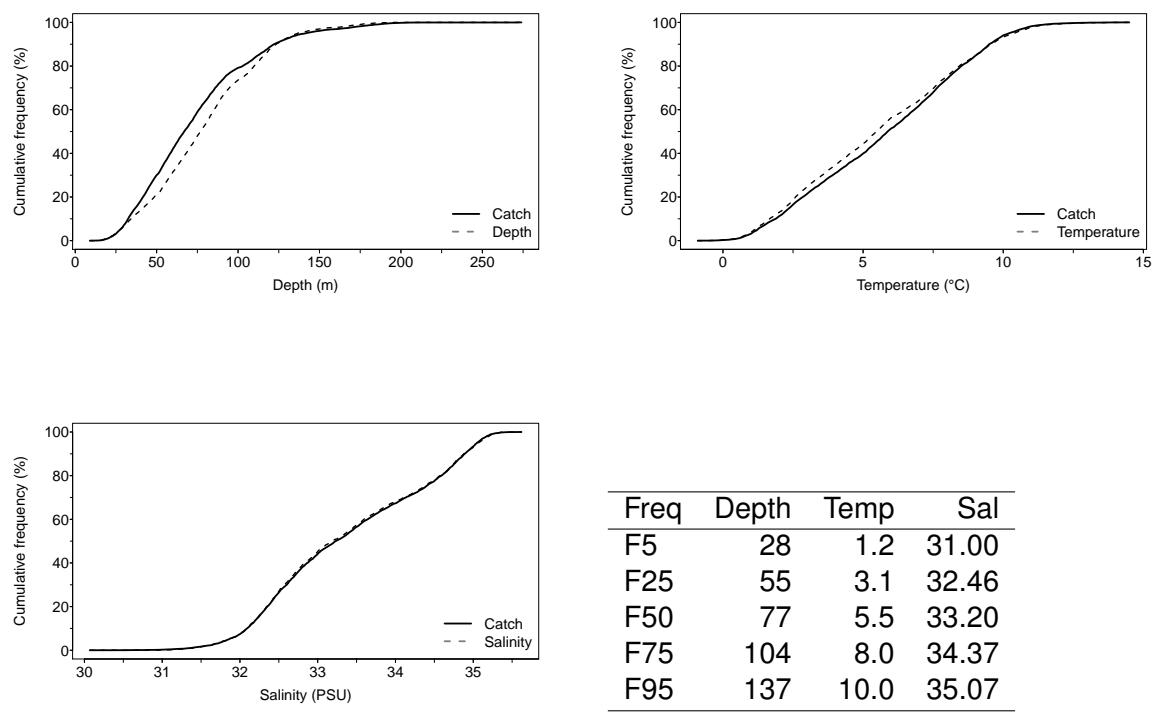

Figure 7.5E. Catch distribution by depth, temperature and salinity of Silver hake.

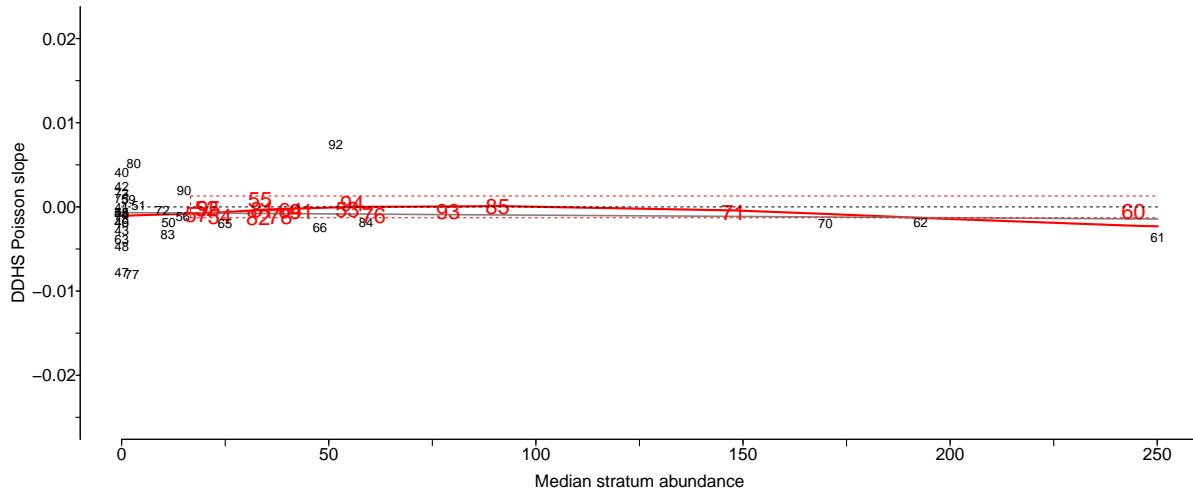

Figure 7.5F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Silver hake.

7.6 Pollock (Goberge) - species code 16 (category LF)

Scientific name: [Pollachius virens](#)

Figure 7.6A. Inverse distance weighted distribution of catch biomass (kg/tow) for Pollock.

Figure 7.6B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Pollock.

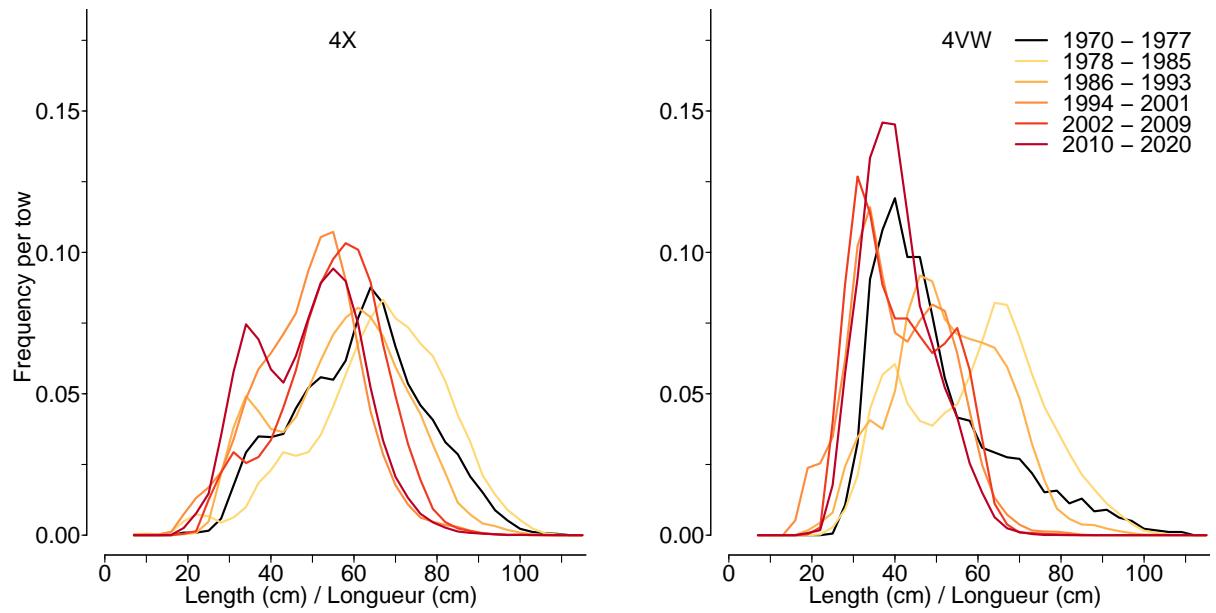

Figure 7.6C. Length frequency distribution in NAFO units 4X and 4VW for Pollock.

Figure 7.6D. Average fish condition in NAFO units 4X and 4VW for Pollock.

Figure 7.6E. Catch distribution by depth, temperature and salinity of Pollock.

Figure 7.6F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Pollock.

7.7 Atlantic redfishes (Sébastes de l'Atlantique) - species code 23 (category LF)

Scientific name: [Sebastes](#)

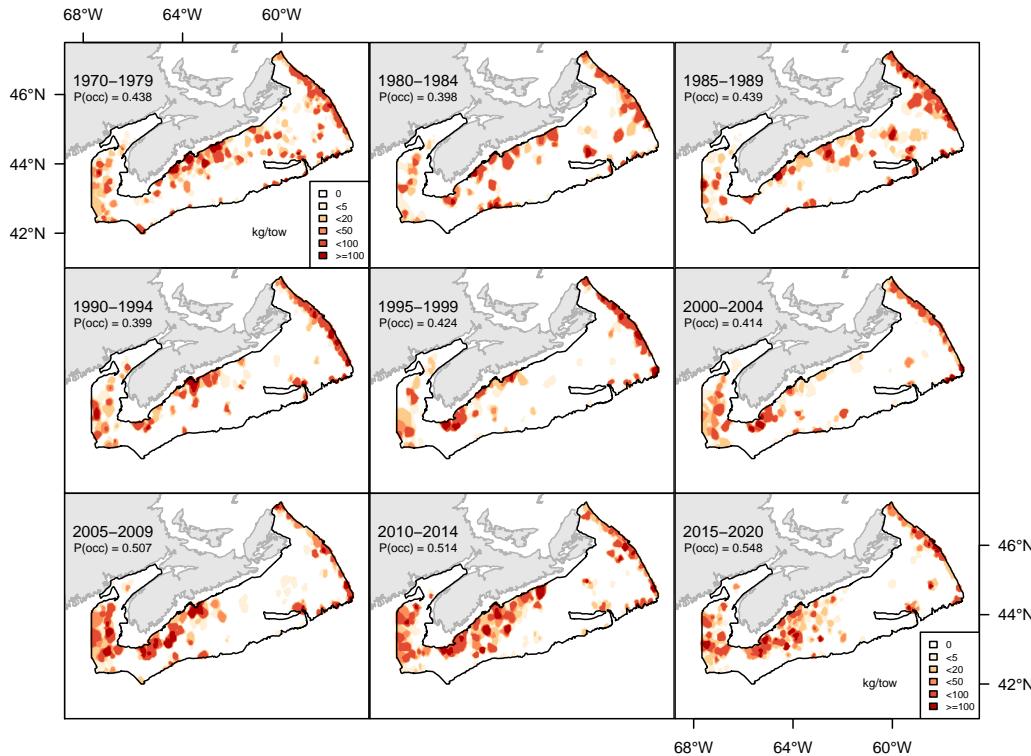

Figure 7.7A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic redfishes.

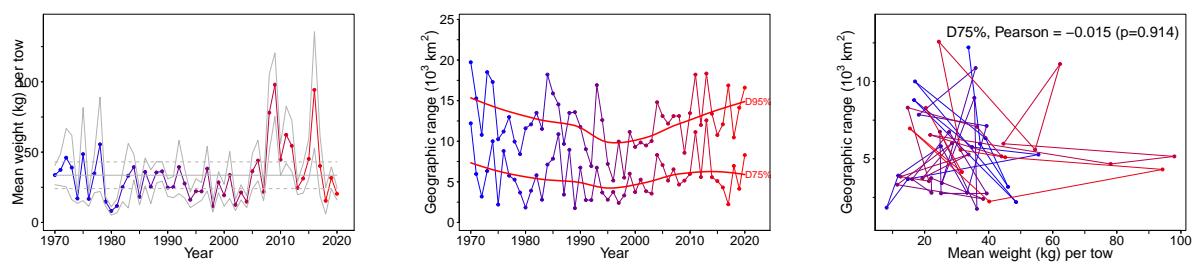

Figure 7.7B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic redfishes.

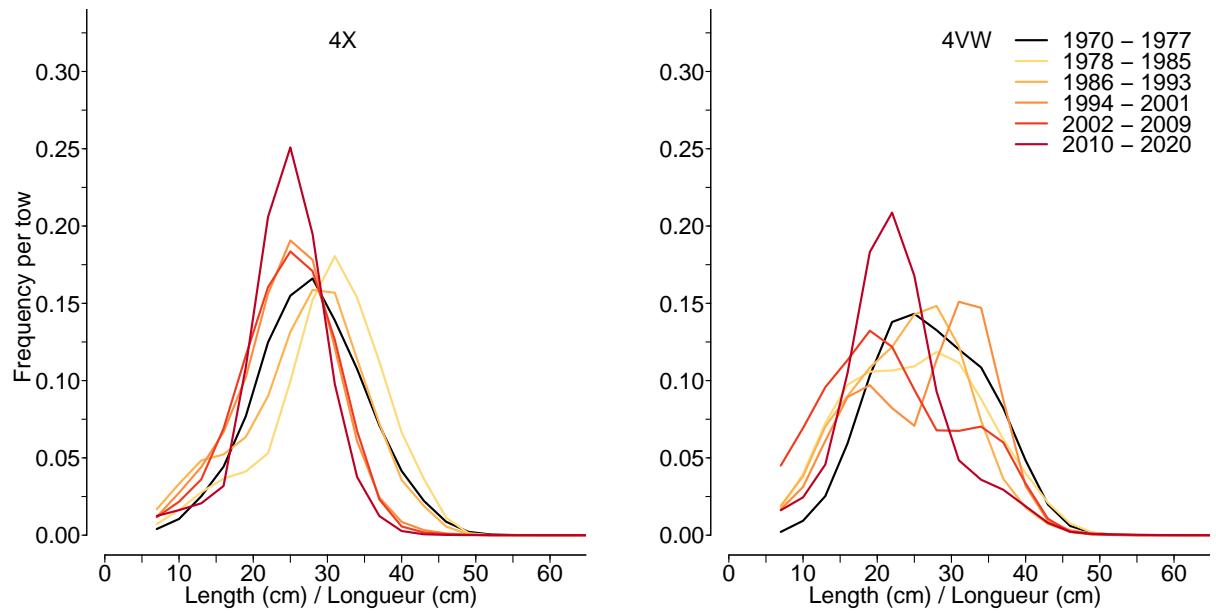

Figure 7.7C. Length frequency distribution in NAFO units 4X and 4VW for Atlantic redfishes.

Figure 7.7D. Average fish condition in NAFO units 4X and 4VW for Atlantic redfishes.

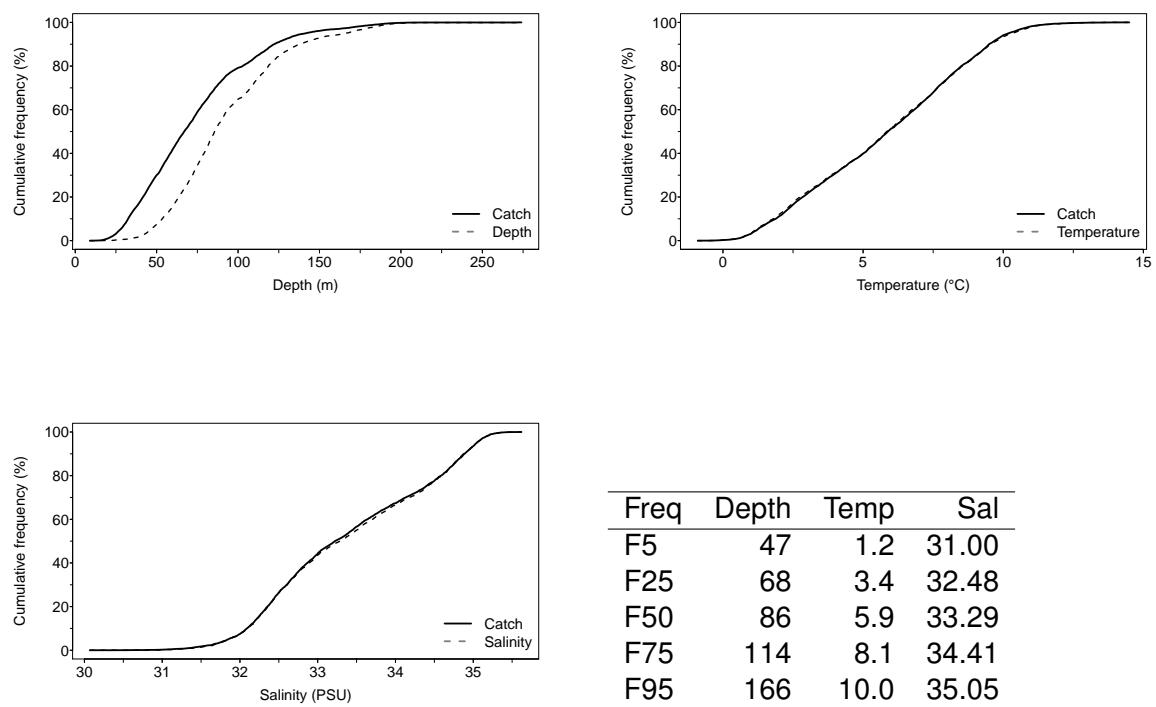

Figure 7.7E. Catch distribution by depth, temperature and salinity of Atlantic redfishes.

7.8 Atlantic halibut (Flétan de l'Atlantique) - species code 30 (category LF)

Scientific name: [Hippoglossus hippoglossus](#)

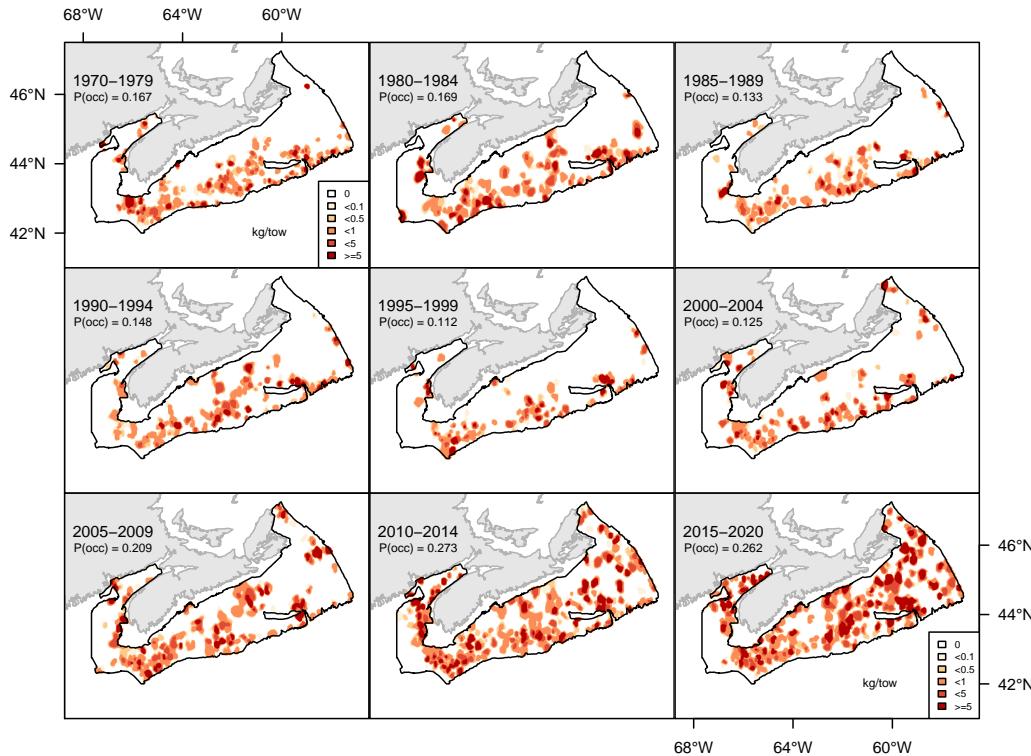

Figure 7.8A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic halibut.

Figure 7.8B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic halibut.

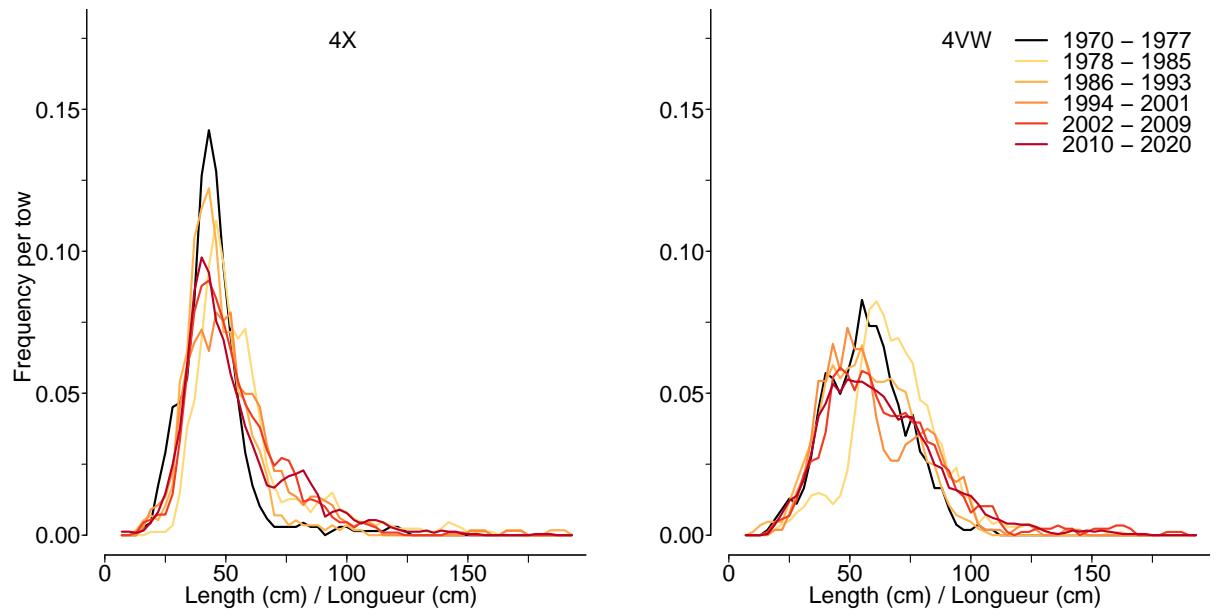

Figure 7.8C. Length frequency distribution in NAFO units 4X and 4VW for Atlantic halibut.

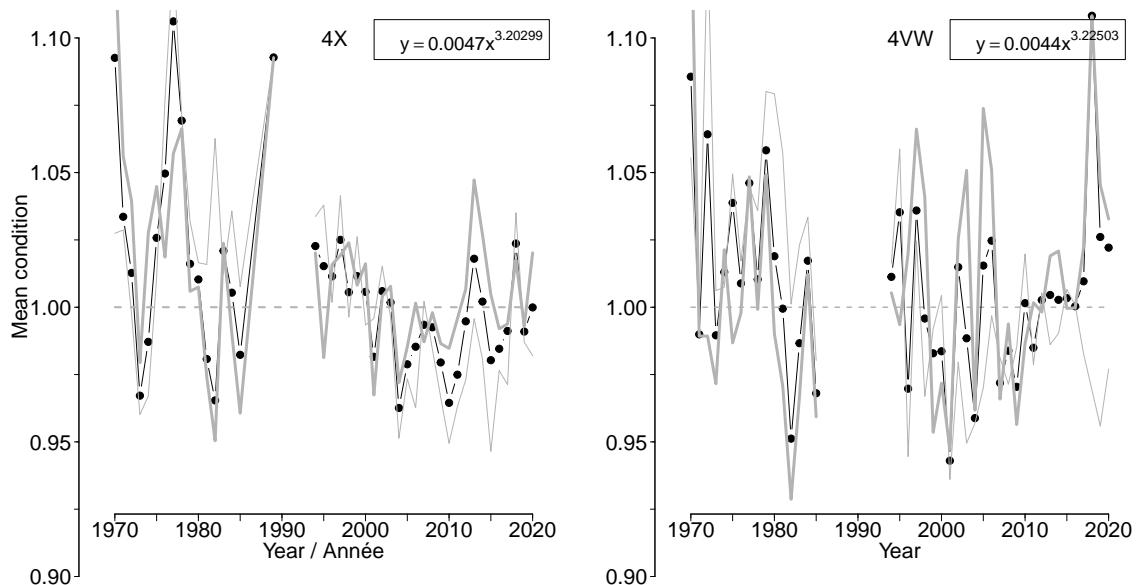

Figure 7.8D. Average fish condition in NAFO units 4X and 4VW for Atlantic halibut.

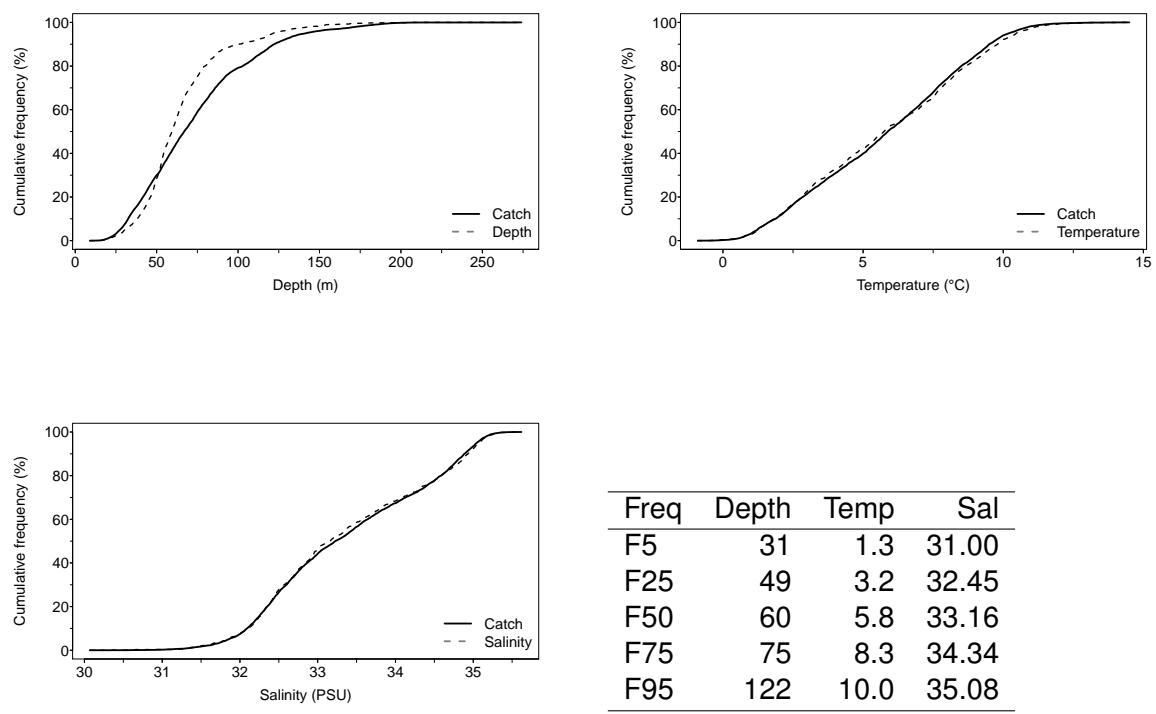

Figure 7.8E. Catch distribution by depth, temperature and salinity of Atlantic halibut.

Figure 7.8F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Atlantic halibut.

7.9 American plaice (*Ple canadienne*) - species code 40 (category LF)

Scientific name: [Hippoglossoides platessoides](#)

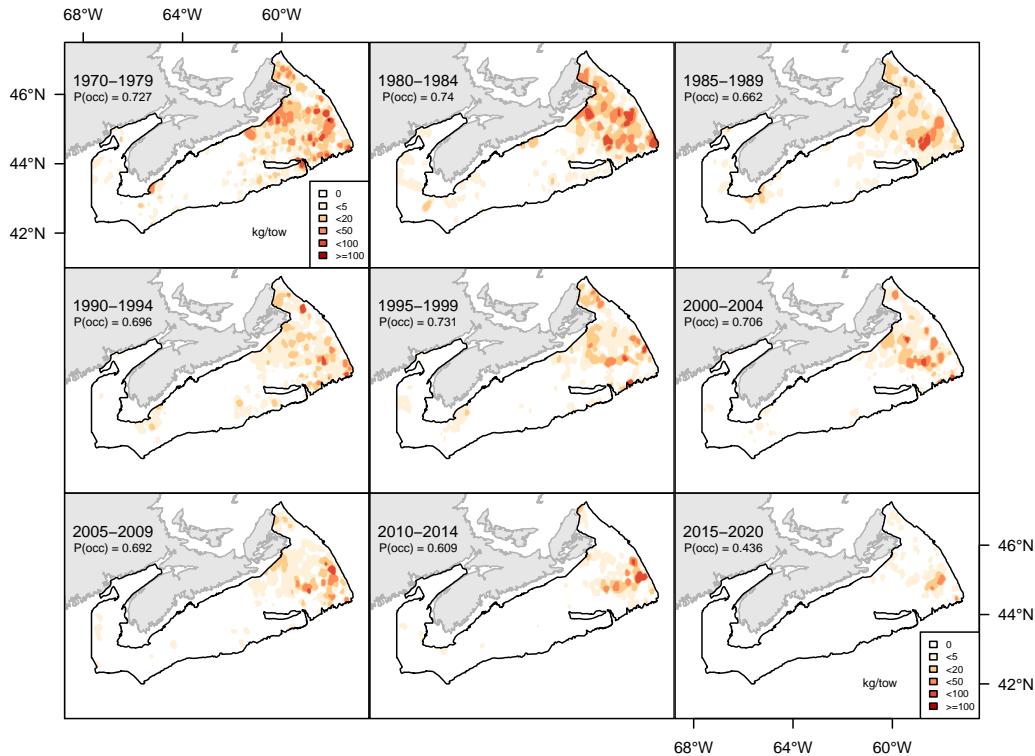

Figure 7.9A. Inverse distance weighted distribution of catch biomass (kg/tow) for American plaice.

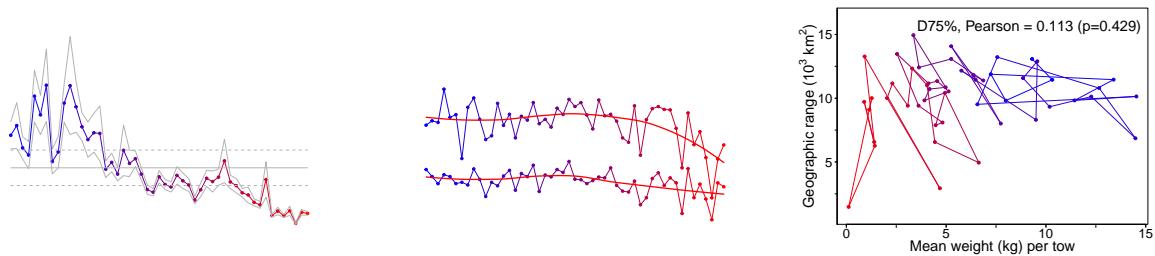

Figure 7.9B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of American plaice.

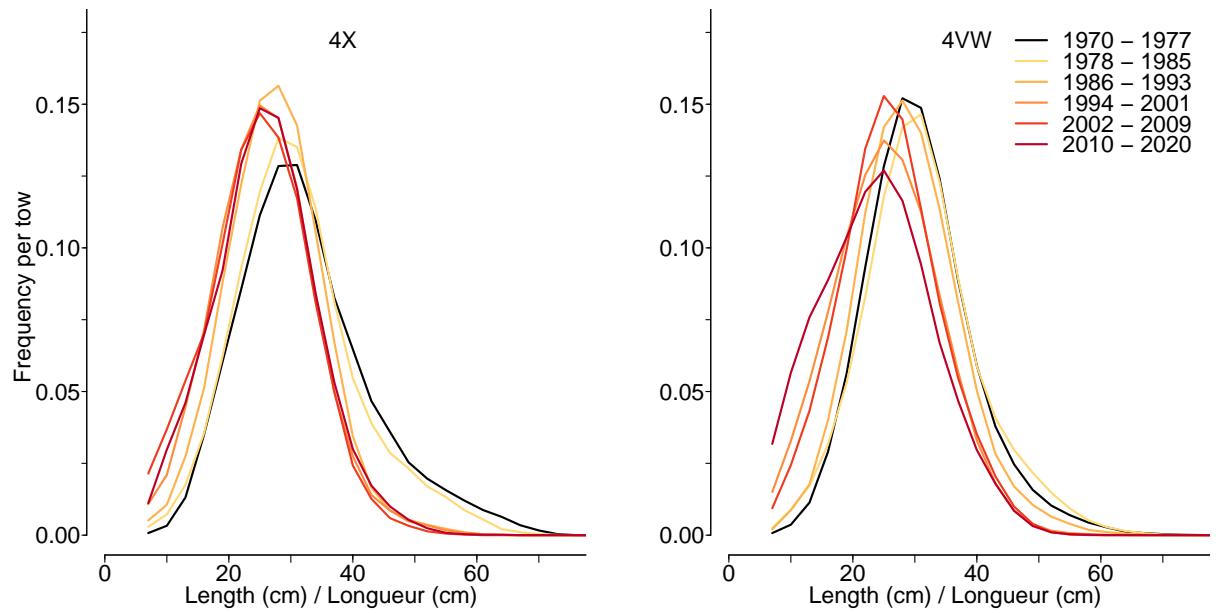

Figure 7.9C. Length frequency distribution in NAFO units 4X and 4VW for American plaice.

Figure 7.9D. Average fish condition in NAFO units 4X and 4VW for American plaice.

Figure 7.9E. Catch distribution by depth, temperature and salinity of American plaice.

Figure 7.9F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for American plaice.

7.10 Witch flounder (*Ple grise*) - species code 41 (category LF)

Scientific name: [Glyptocephalus cynoglossus](#)

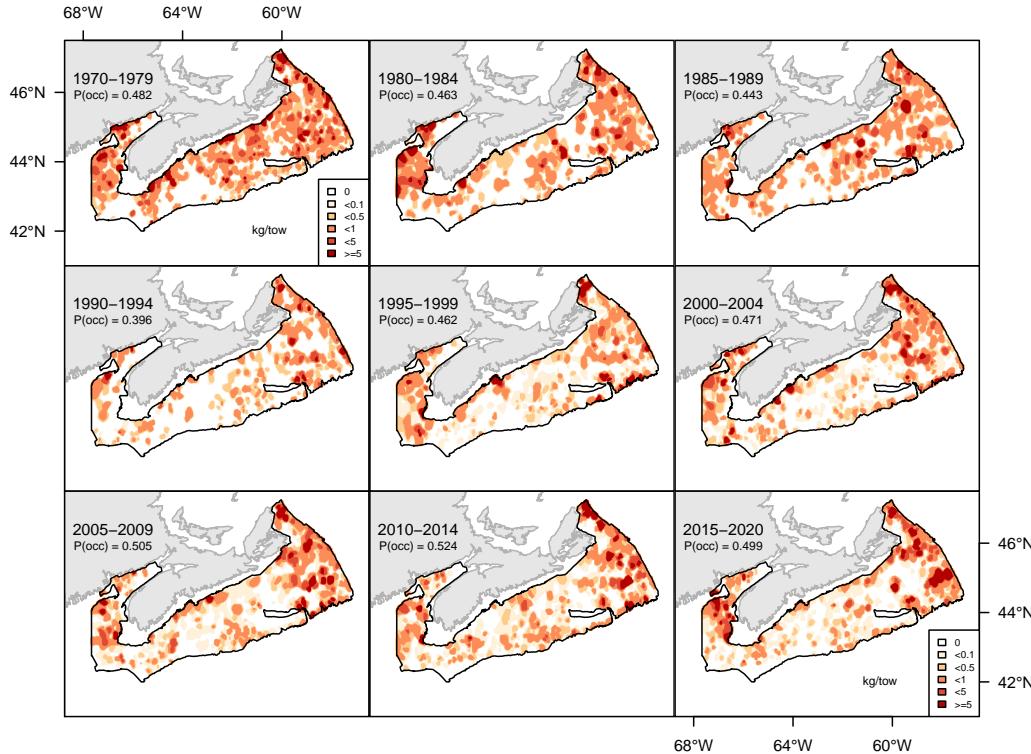

Figure 7.10A. Inverse distance weighted distribution of catch biomass (kg/tow) for Witch flounder.

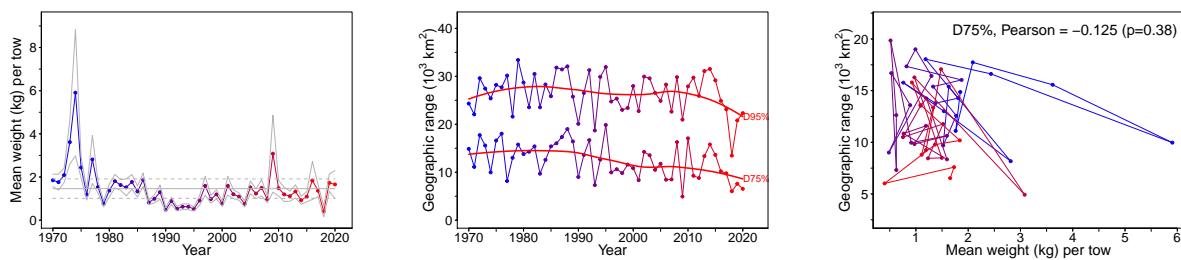

Figure 7.10B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Witch flounder.

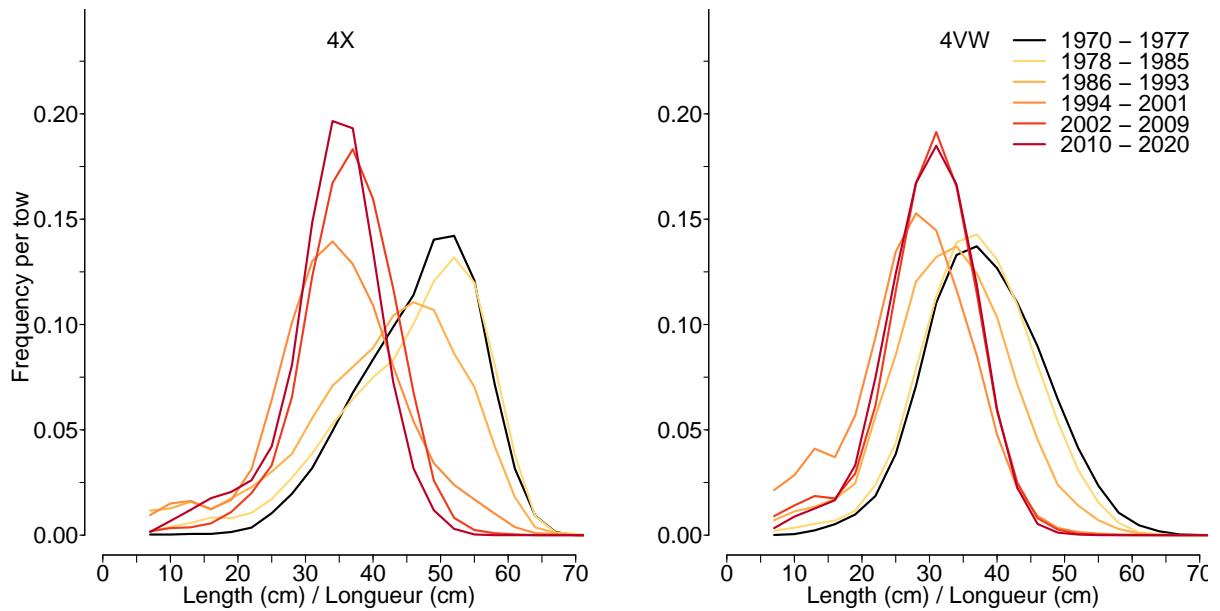

Figure 7.10C. Length frequency distribution in NAFO units 4X and 4VW for Witch flounder.

Figure 7.10D. Average fish condition in NAFO units 4X and 4VW for Witch flounder.

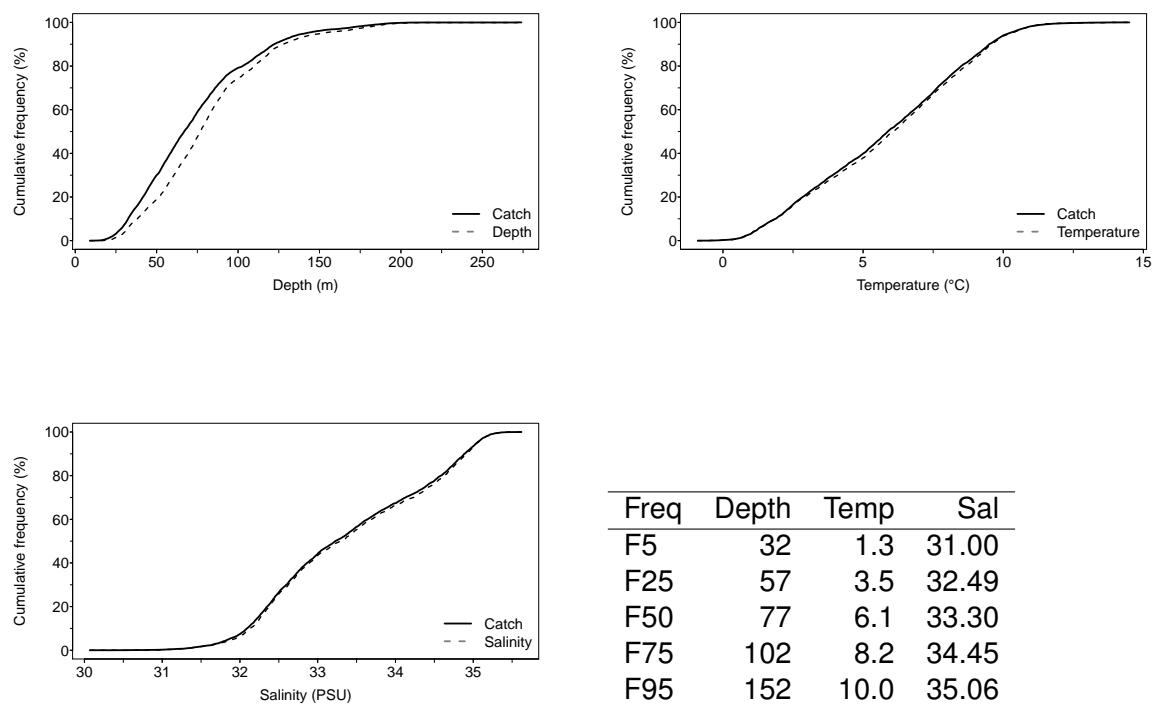

Figure 7.10E. Catch distribution by depth, temperature and salinity of Witch flounder.

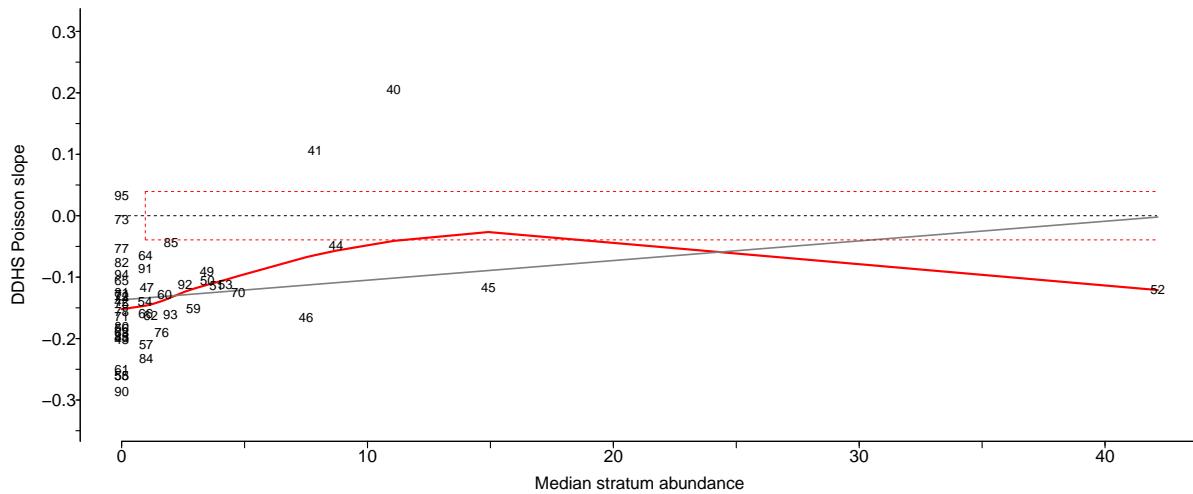

Figure 7.10F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Witch flounder.

7.11 Yellowtail flounder (Limande à queue jaune) - species code 42 (category LF)

Scientific name: [Limanda ferruginea](#)

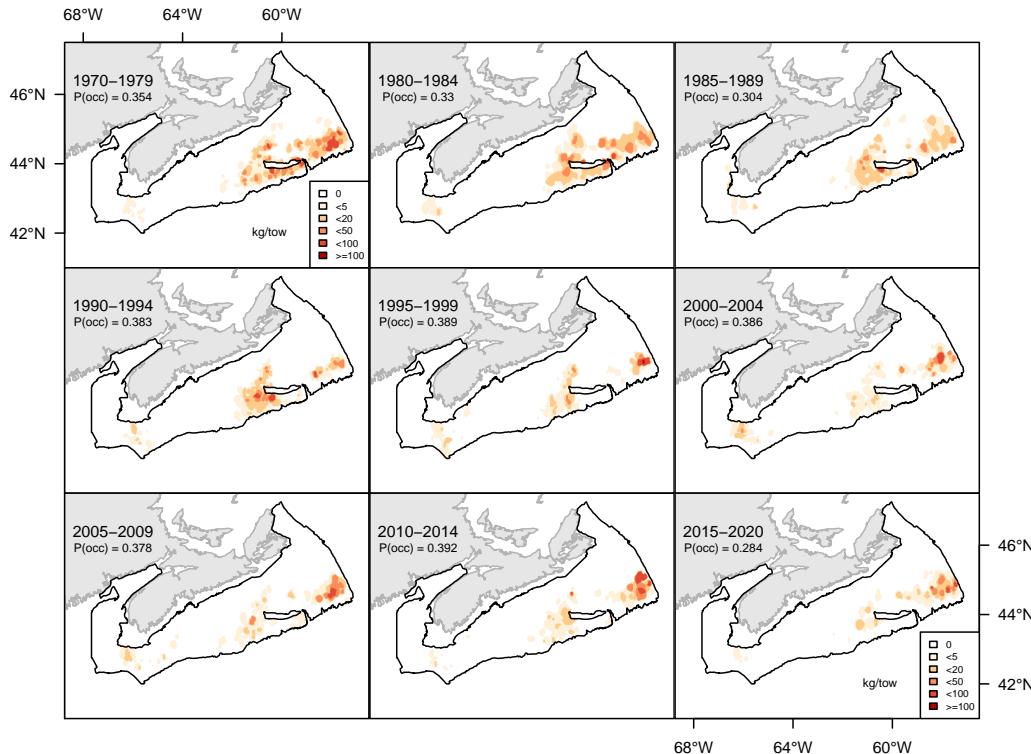

Figure 7.11A. Inverse distance weighted distribution of catch biomass (kg/tow) for Yellowtail flounder.

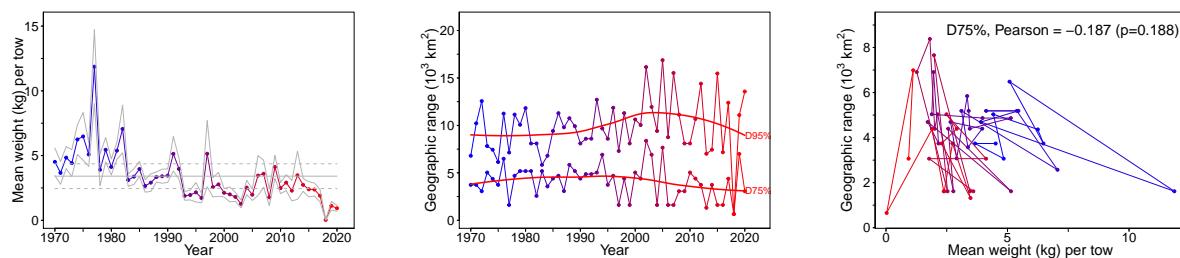

Figure 7.11B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Yellowtail flounder.

Figure 7.11C. Length frequency distribution in NAFO units 4X and 4VW for Yellowtail flounder.

Figure 7.11D. Average fish condition in NAFO units 4X and 4VW for Yellowtail flounder.

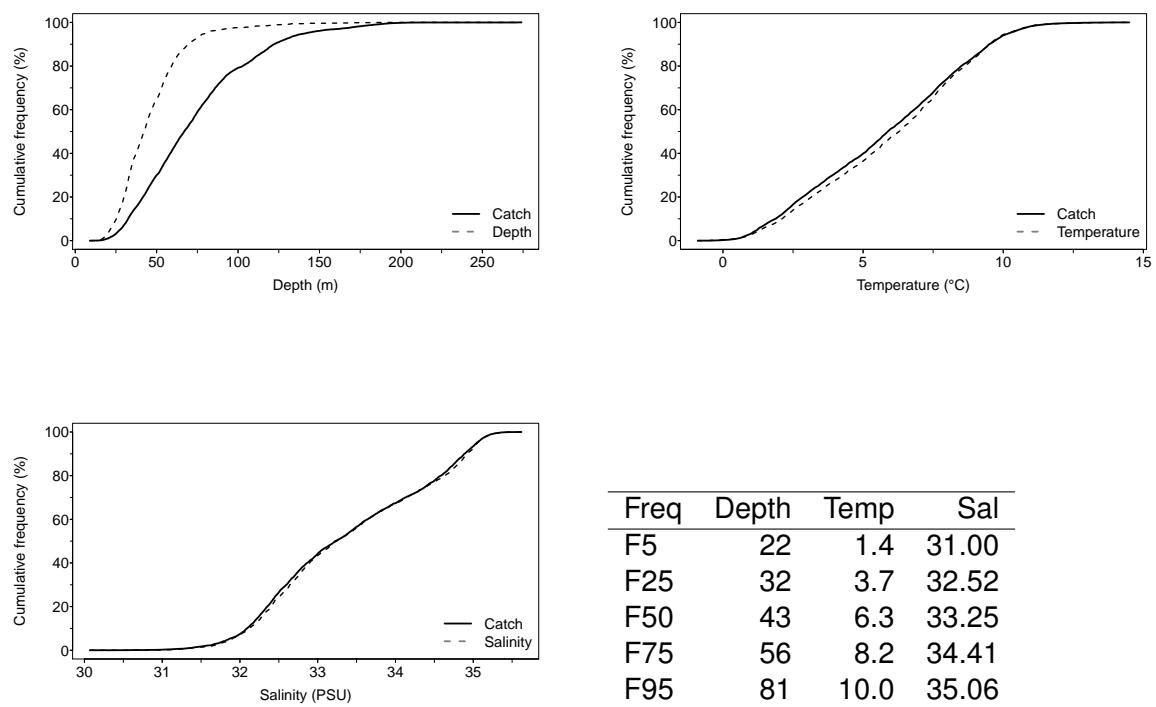

Figure 7.11E. Catch distribution by depth, temperature and salinity of Yellowtail flounder.

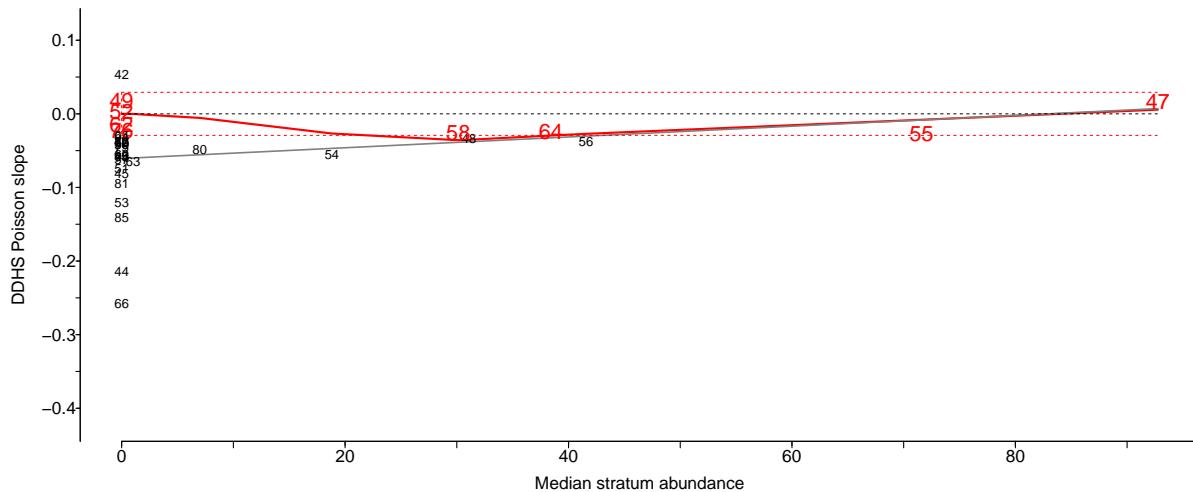

Figure 7.11F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Yellowtail flounder.

7.12 Winter flounder (Limande-plie rouge) - species code 43 (category LF)

Scientific name: [Pseudopleuronectes americanus](#)

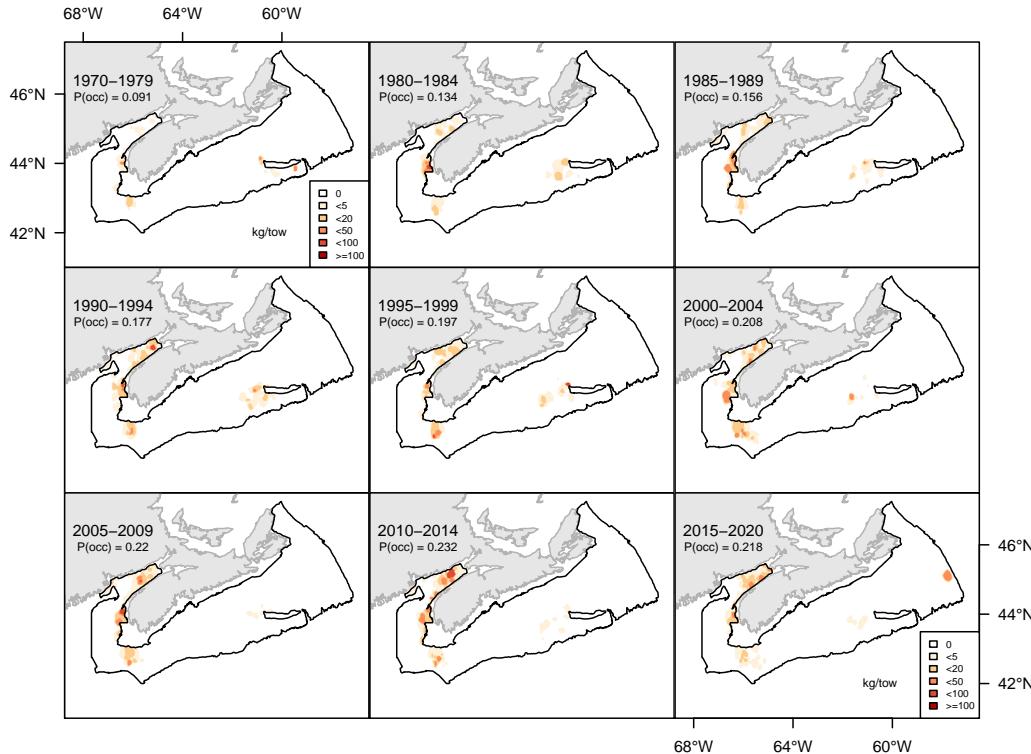

Figure 7.12A. Inverse distance weighted distribution of catch biomass (kg/tow) for Winter flounder.

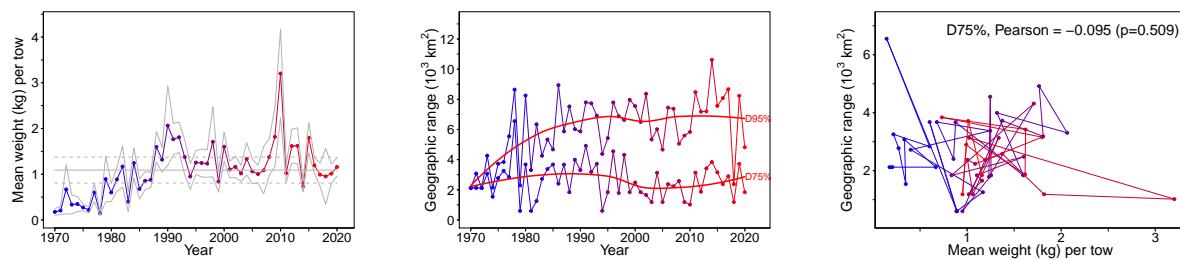

Figure 7.12B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Winter flounder.

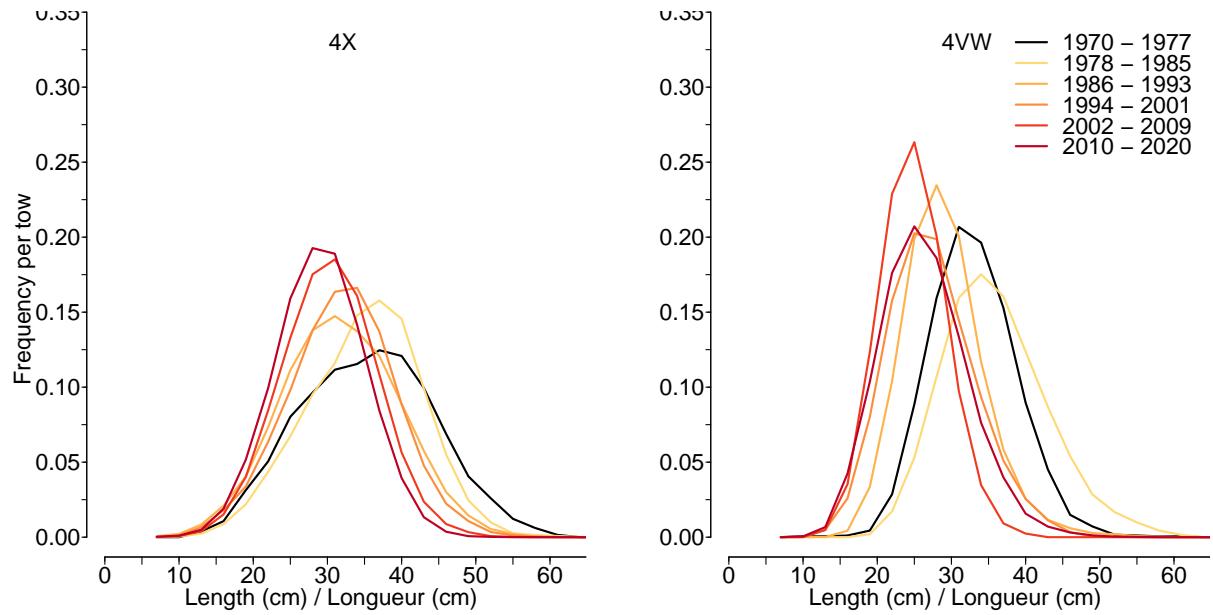

Figure 7.12C. Length frequency distribution in NAFO units 4X and 4VW for Winter flounder.

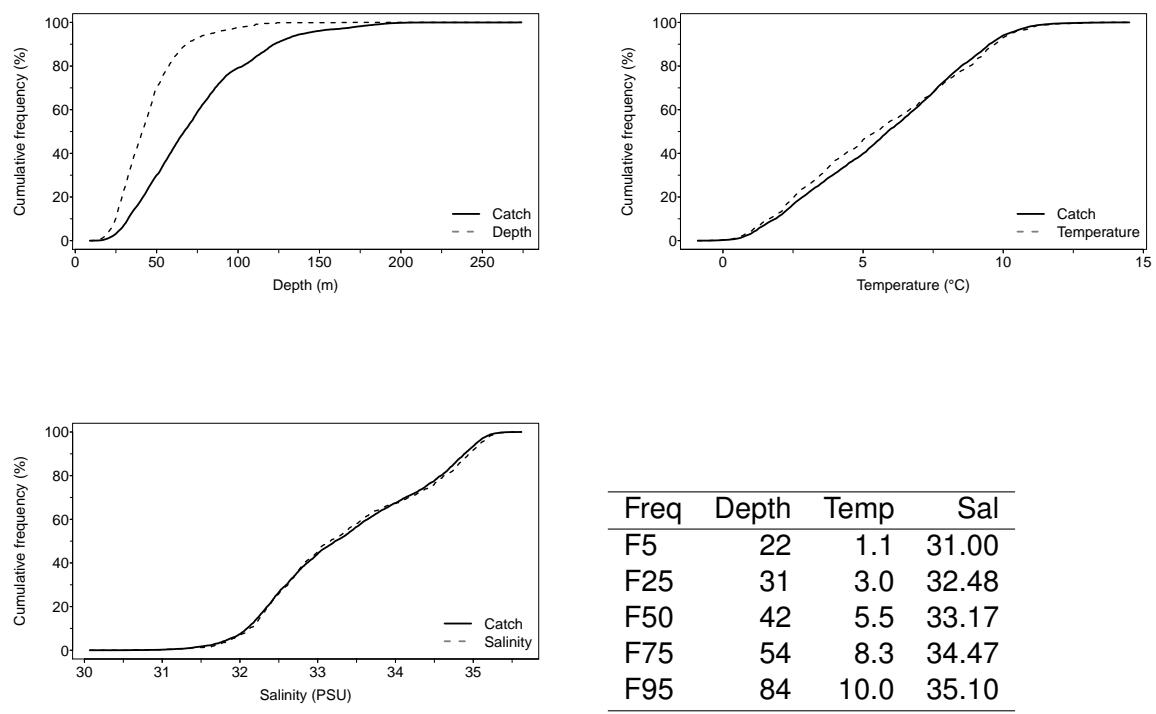

Figure 7.12D. Average fish condition in NAFO units 4X and 4VW for Winter flounder.

Freq	Depth	Temp	Sal
F5	22	1.1	31.00
F25	31	3.0	32.48
F50	42	5.5	33.17
F75	54	8.3	34.47
F95	84	10.0	35.10

Figure 7.12E. Catch distribution by depth, temperature and salinity of Winter flounder.

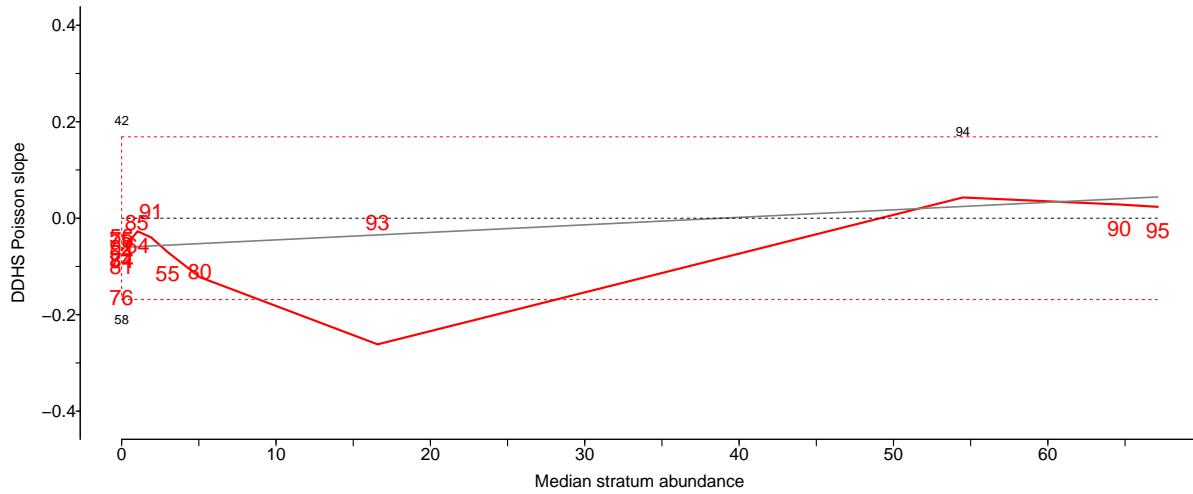

Figure 7.12F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Winter flounder.

7.13 Atlantic wolffish (Loup atlantique) - species code 50 (category LF)

Scientific name: [Anarhichas lupus](#)

Figure 7.13A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic wolffish.

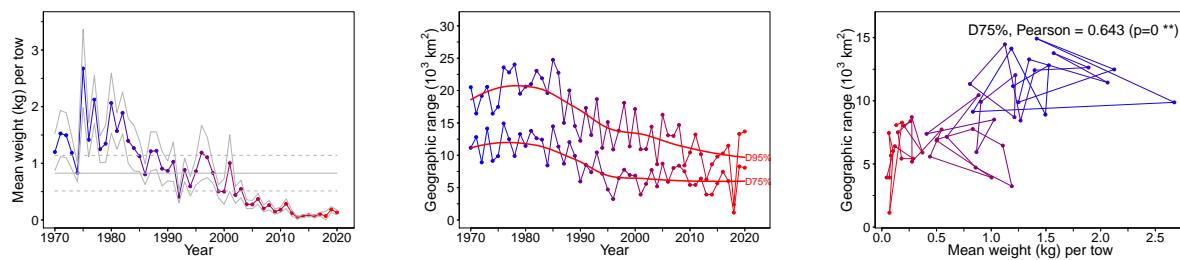

Figure 7.13B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic wolffish.

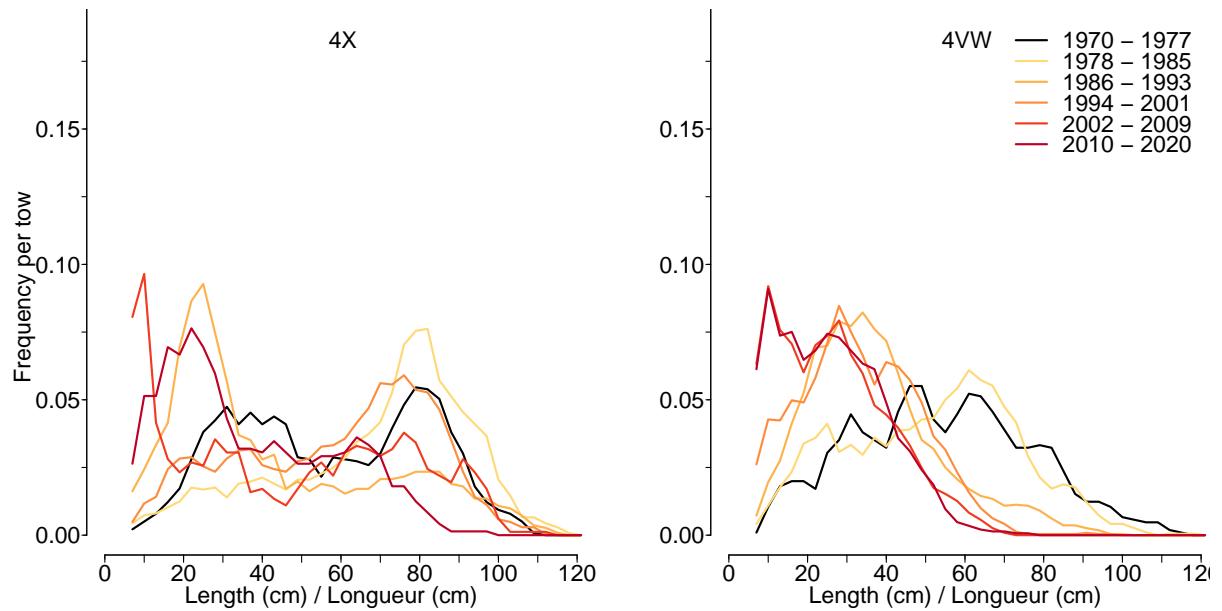

Figure 7.13C. Length frequency distribution in NAFO units 4X and 4VW for Atlantic wolffish.

Figure 7.13D. Average fish condition in NAFO units 4X and 4VW for Atlantic wolffish.

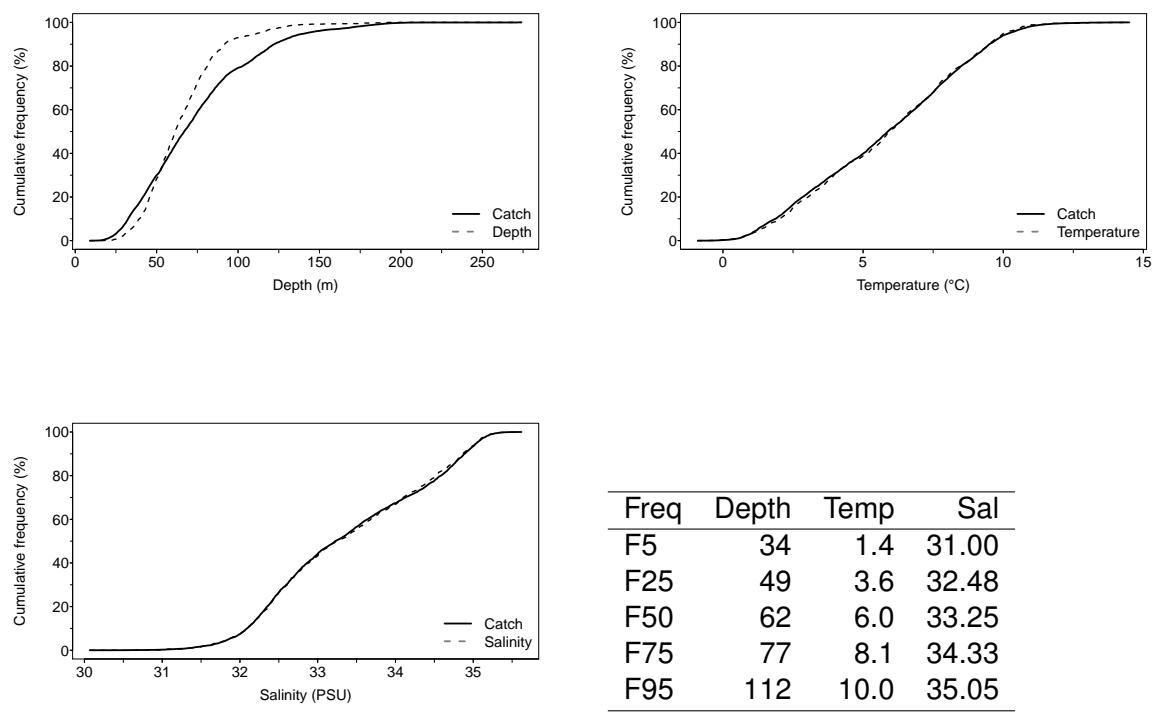

Figure 7.13E. Catch distribution by depth, temperature and salinity of Atlantic wolffish.

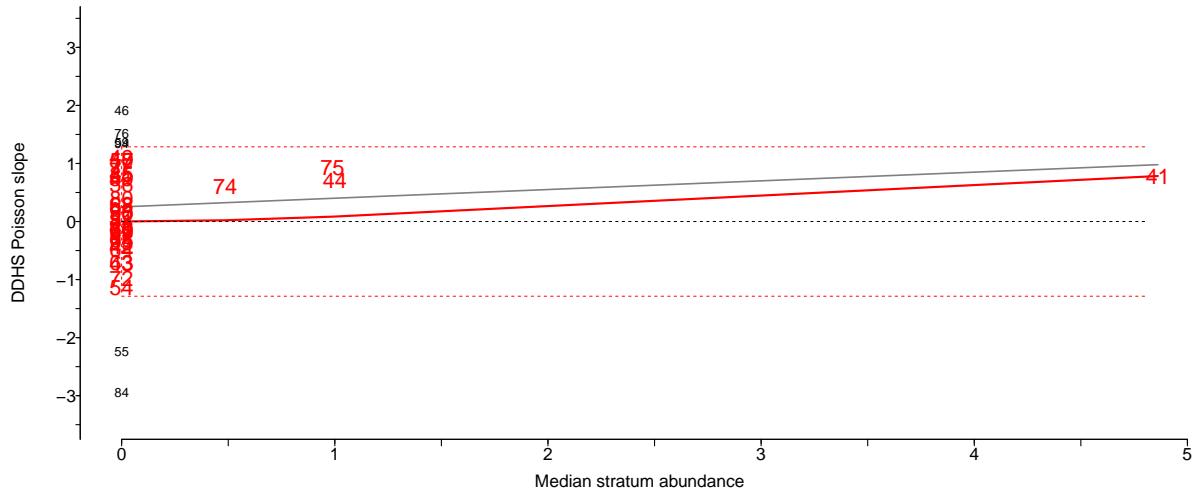

Figure 7.13F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Atlantic wolffish.

7.14 Atlantic herring (Hareng de l'Atlantique) - species code 60 (category LF)

Scientific name: [Clupea harengus](#)

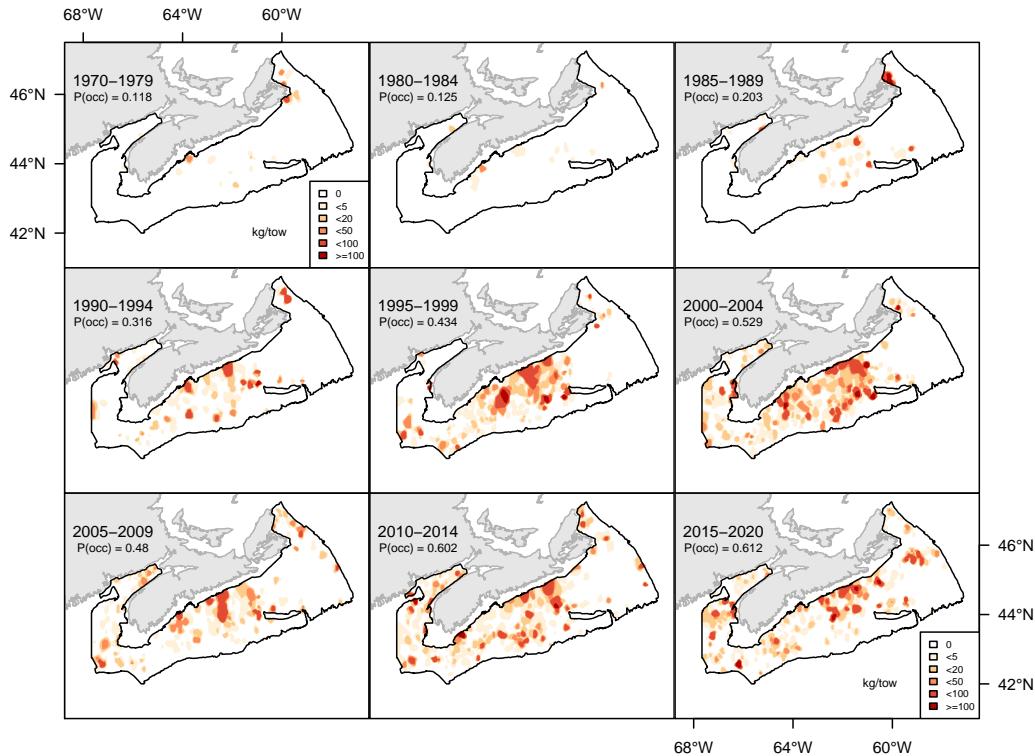

Figure 7.14A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic herring.

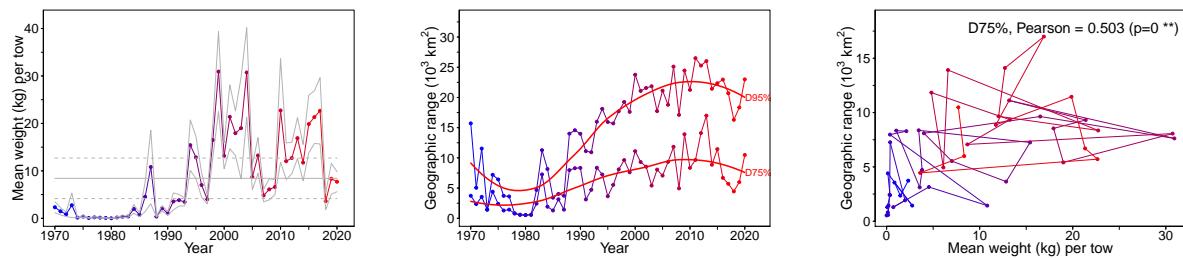

Figure 7.14B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic herring.

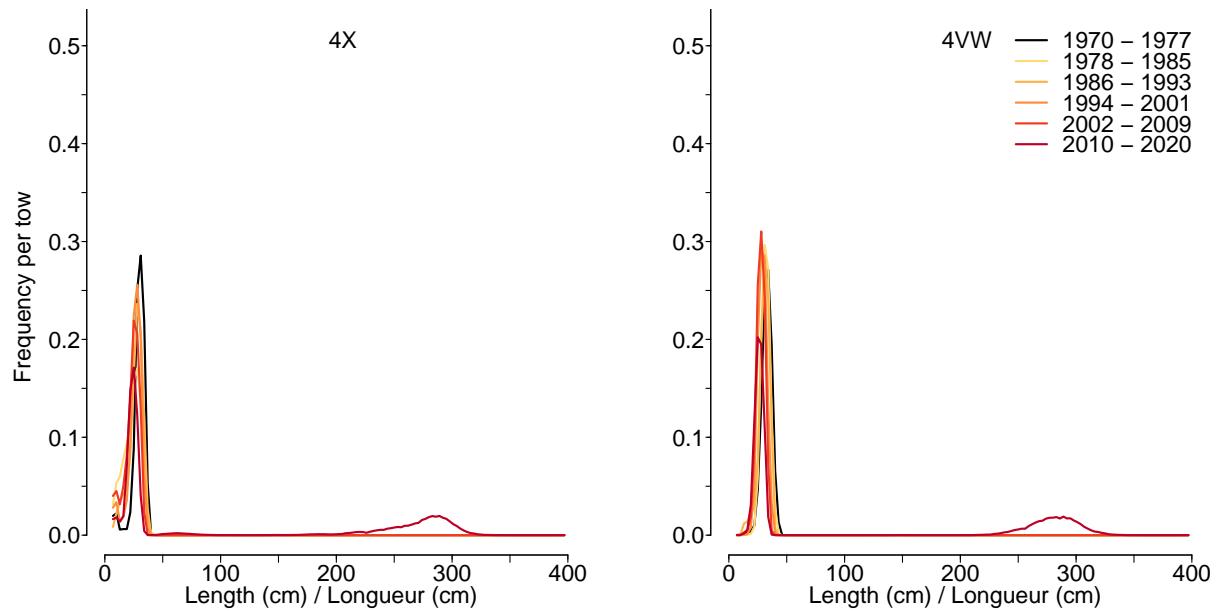

Figure 7.14C. Length frequency distribution in NAFO units 4X and 4VW for Atlantic herring.

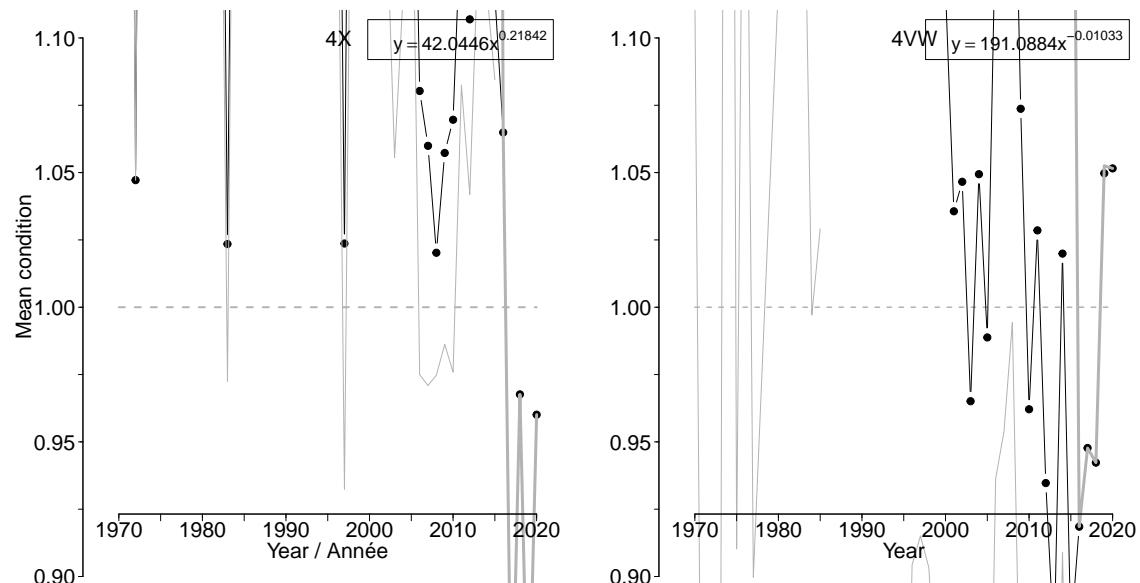

Figure 7.14D. Average fish condition in NAFO units 4X and 4VW for Atlantic herring.

Figure 7.14E. Catch distribution by depth, temperature and salinity of Atlantic herring.

Figure 7.14F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Atlantic herring.

7.15 Longhorn sculpin (Chaboisseau à dix-huit épines) - species code 300 (category LF)

Scientific name: [Myoxocephalus octodecemspiniferus](#)

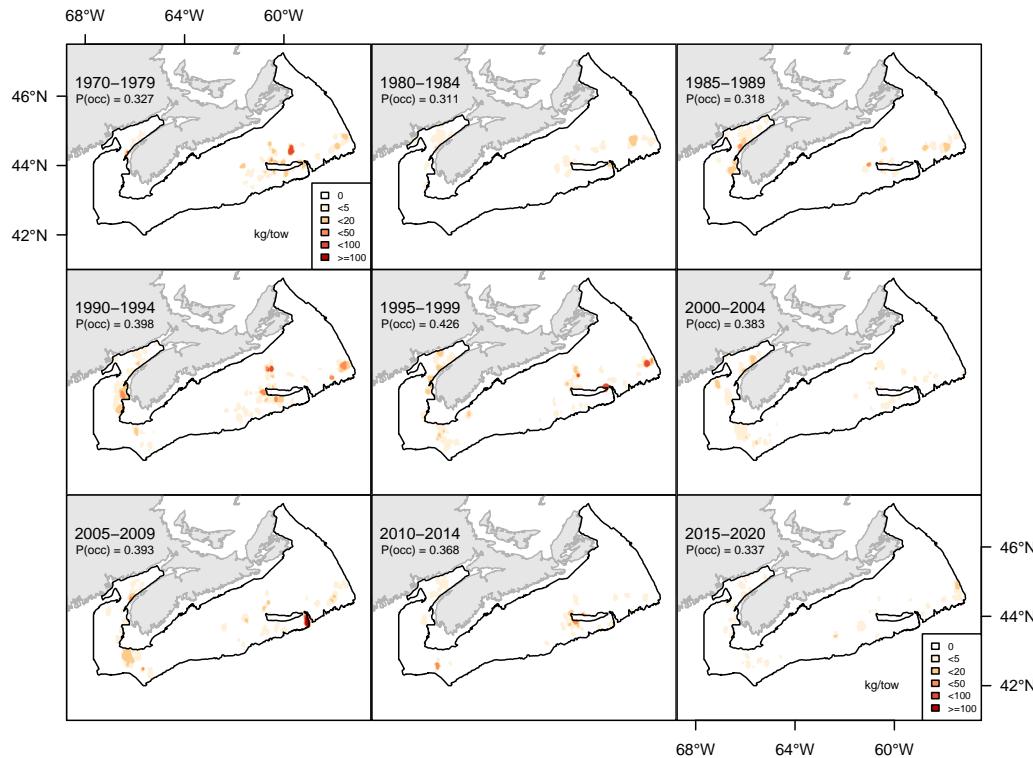

Figure 7.15A. Inverse distance weighted distribution of catch biomass (kg/tow) for Longhorn sculpin.

Figure 7.15B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Longhorn sculpin.

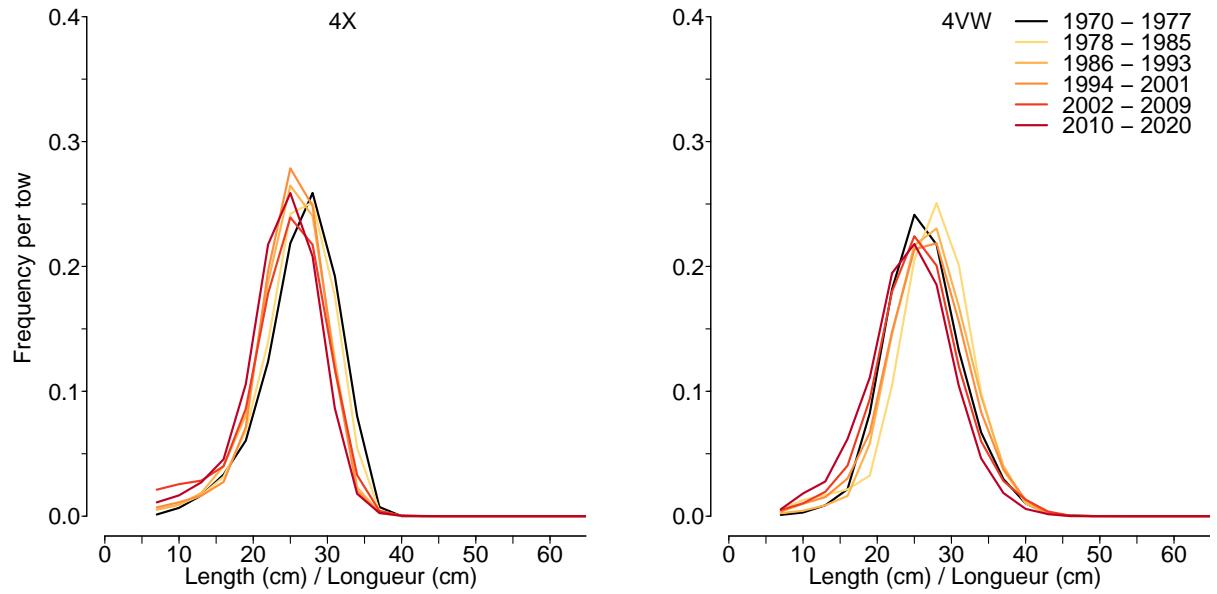

Figure 7.15C. Length frequency distribution in NAFO units 4X and 4VW for Longhorn sculpin.

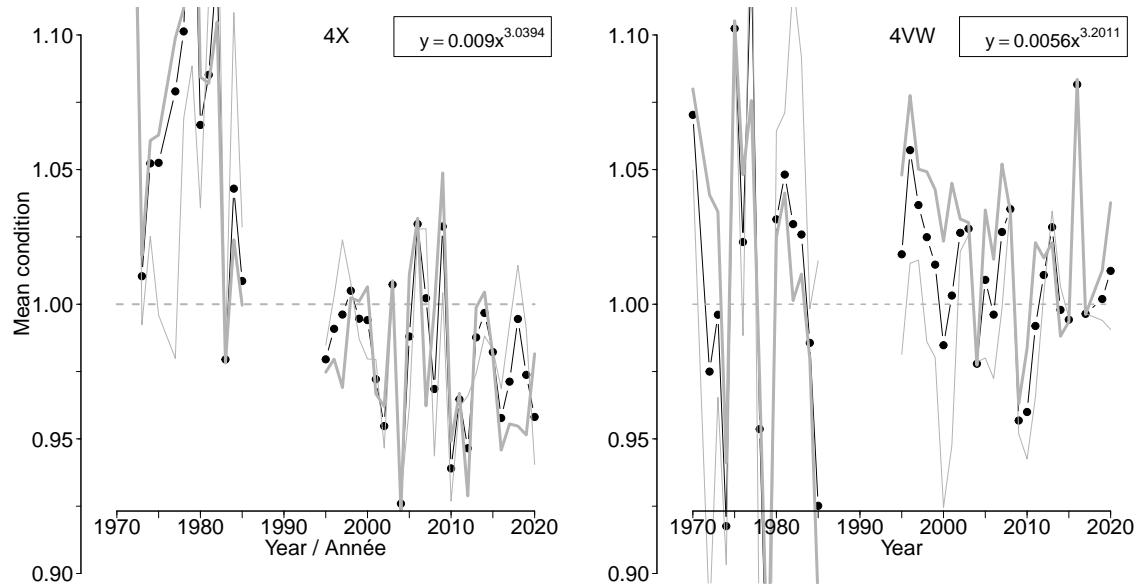

Figure 7.15D. Average fish condition in NAFO units 4X and 4VW for Longhorn sculpin.

Figure 7.15E. Catch distribution by depth, temperature and salinity of Longhorn sculpin.

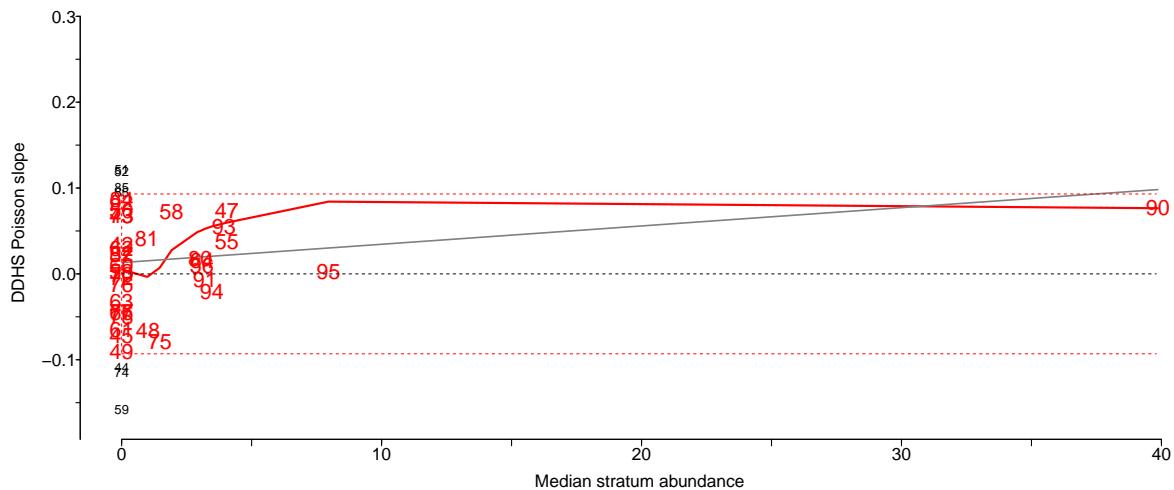

Figure 7.15F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Longhorn sculpin.

7.16 Moustache sculpin (Faux-trigle armé) - species code 304 (category LF)

Scientific name: [Triglops murrayi](#)

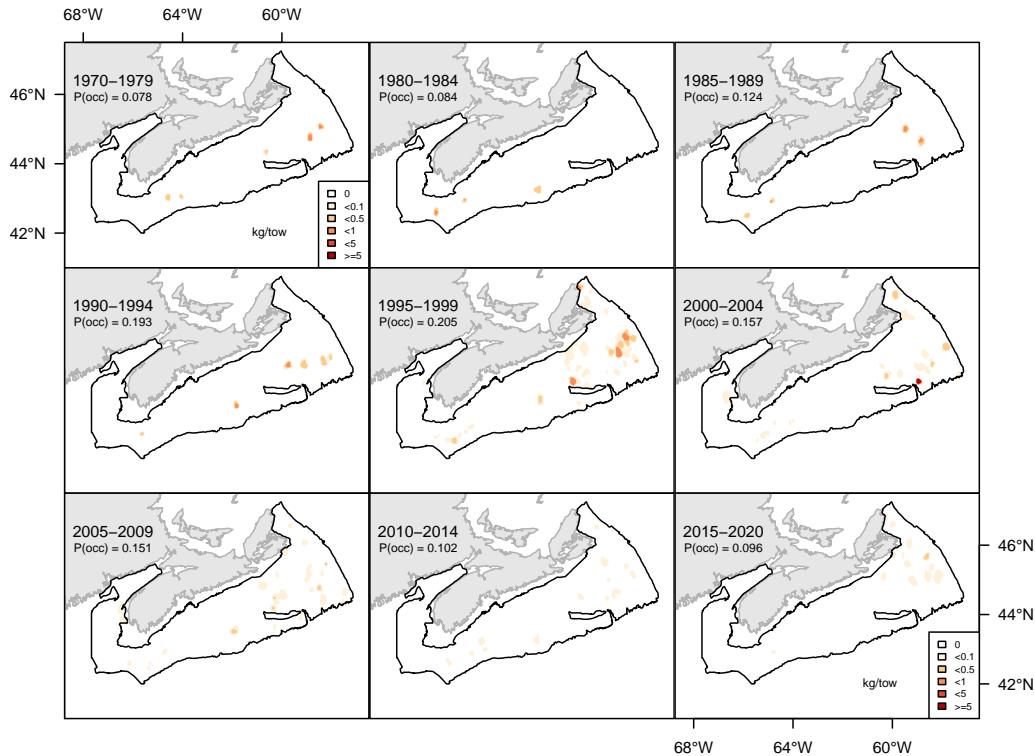

Figure 7.16A. Inverse distance weighted distribution of catch biomass (kg/tow) for Moustache sculpin.

Figure 7.16B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Moustache sculpin.

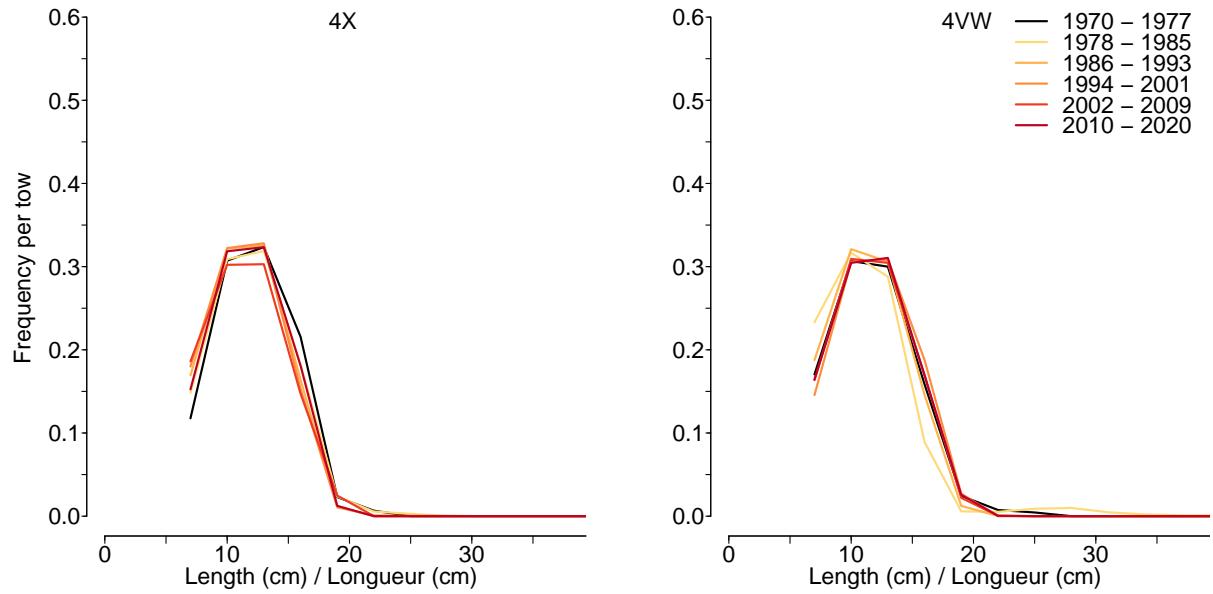

Figure 7.16C. Length frequency distribution in NAFO units 4X and 4VW for Moustache sculpin.

Figure 7.16D. Average fish condition in NAFO units 4X and 4VW for Moustache sculpin.

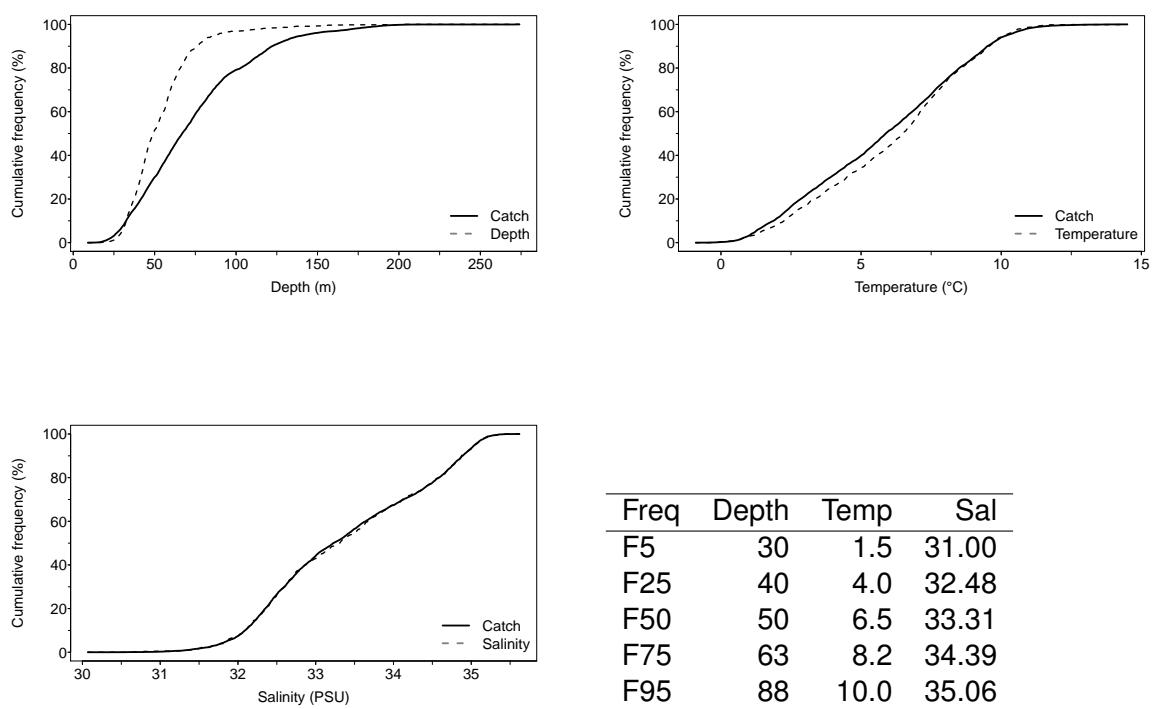

Figure 7.16E. Catch distribution by depth, temperature and salinity of Moustache sculpin.

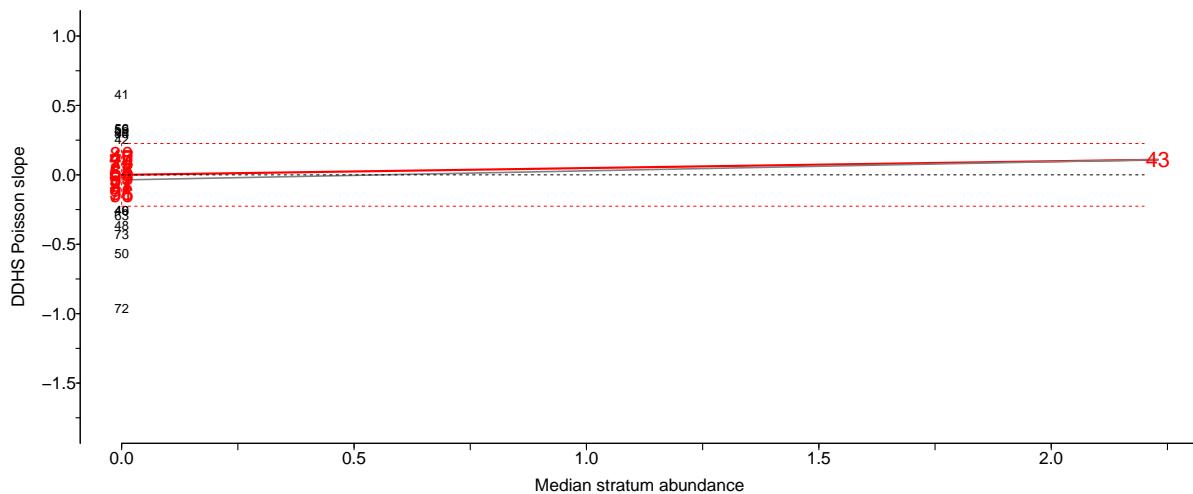

Figure 7.16F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Moustache sculpin.

7.17 Sea raven (Hémithriptère atlantique) - species code 320 (category LF)

Scientific name: [Hemitripterus americanus](#)

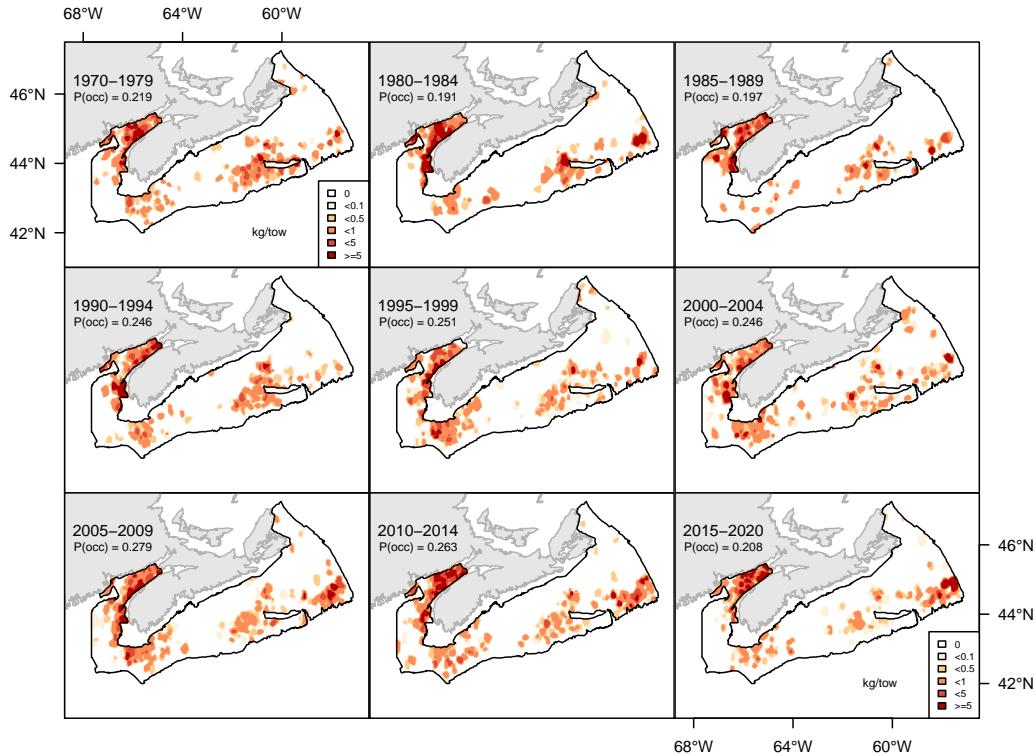

Figure 7.17A. Inverse distance weighted distribution of catch biomass (kg/tow) for Sea raven.

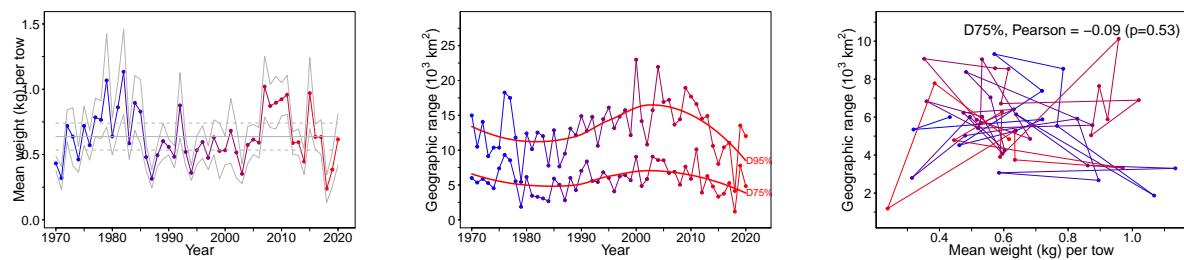

Figure 7.17B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Sea raven.

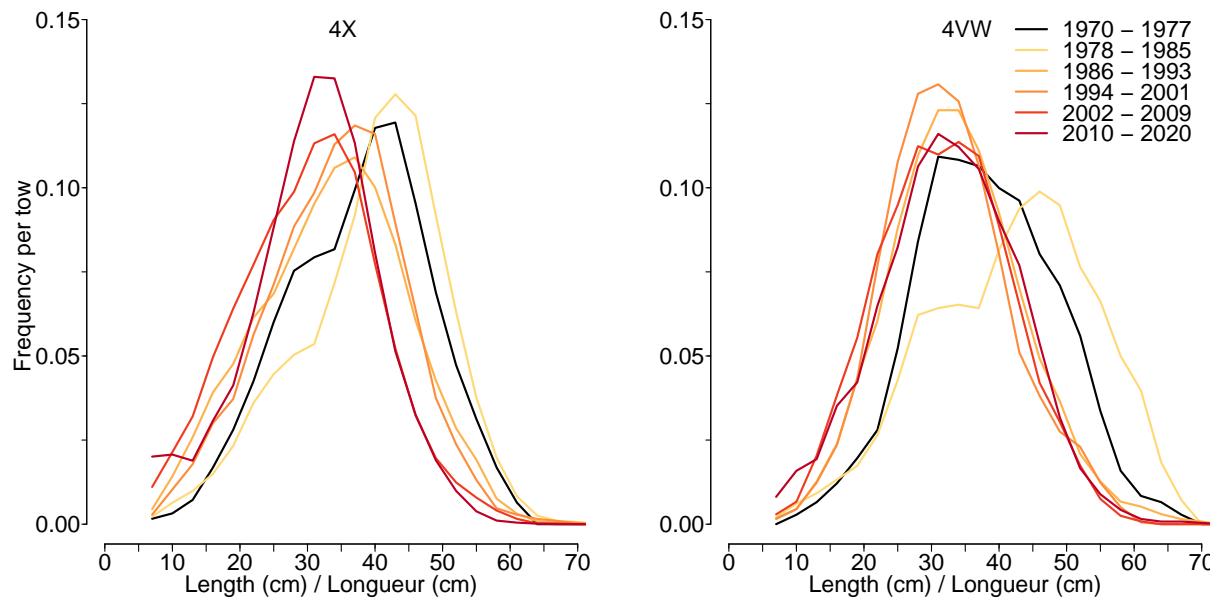

Figure 7.17C. Length frequency distribution in NAFO units 4X and 4VW for Sea raven.

Figure 7.17D. Average fish condition in NAFO units 4X and 4VW for Sea raven.

Freq	Depth	Temp	Sal
F5	22	1.1	31.00
F25	32	3.1	32.43
F50	45	5.4	33.15
F75	61	8.0	34.35
F95	89	10.0	35.05

Figure 7.17E. Catch distribution by depth, temperature and salinity of Sea raven.

Figure 7.17F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Sea raven.

7.18 Alligatorfish (Poisson-alligator atlantique) - species code 340 (category LF)

Scientific name: [Aspidophoroides monopterygius](#)

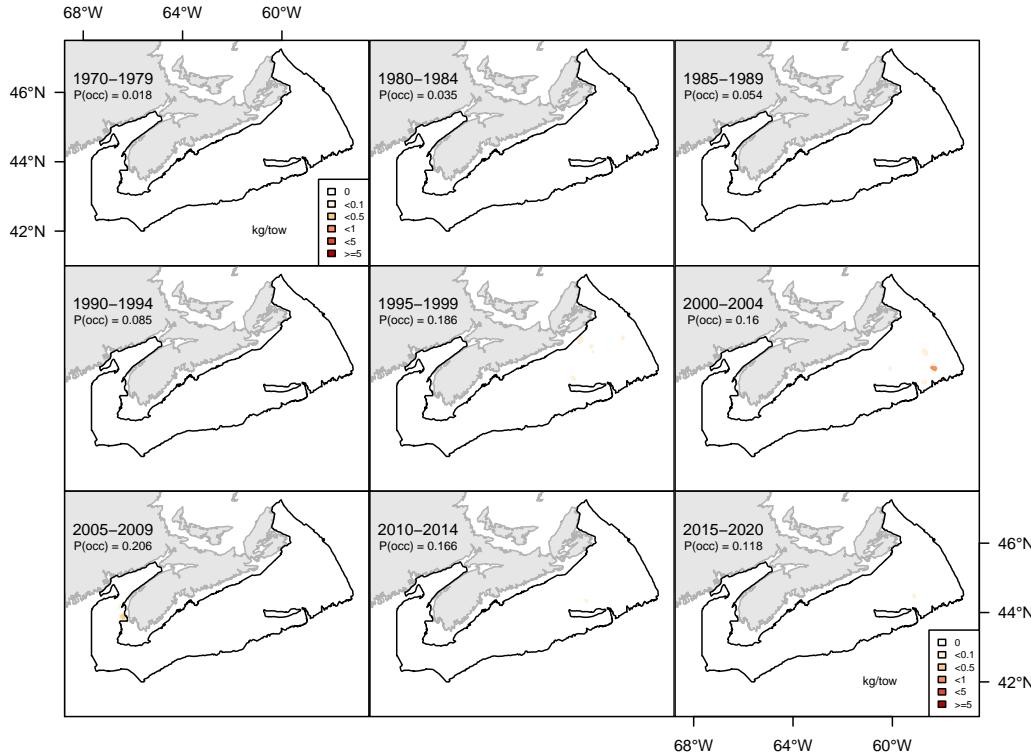

Figure 7.18A. Inverse distance weighted distribution of catch biomass (kg/tow) for Alligatorfish.

Figure 7.18B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Alligatorfish.

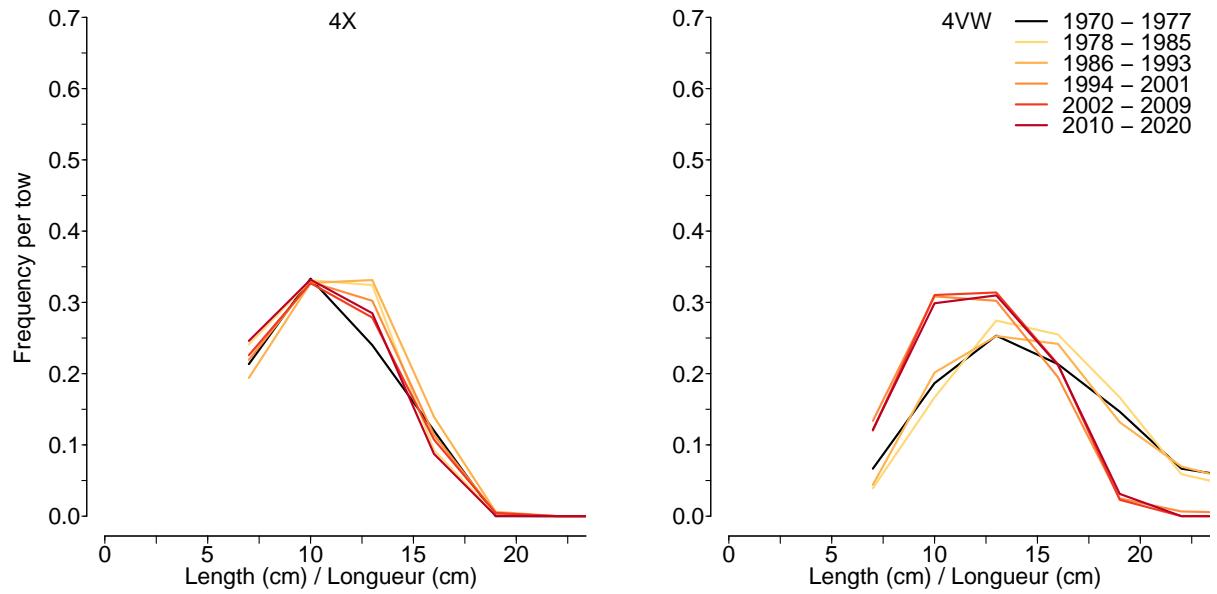

Figure 7.18C. Length frequency distribution in NAFO units 4X and 4VW for Alligatorfish.

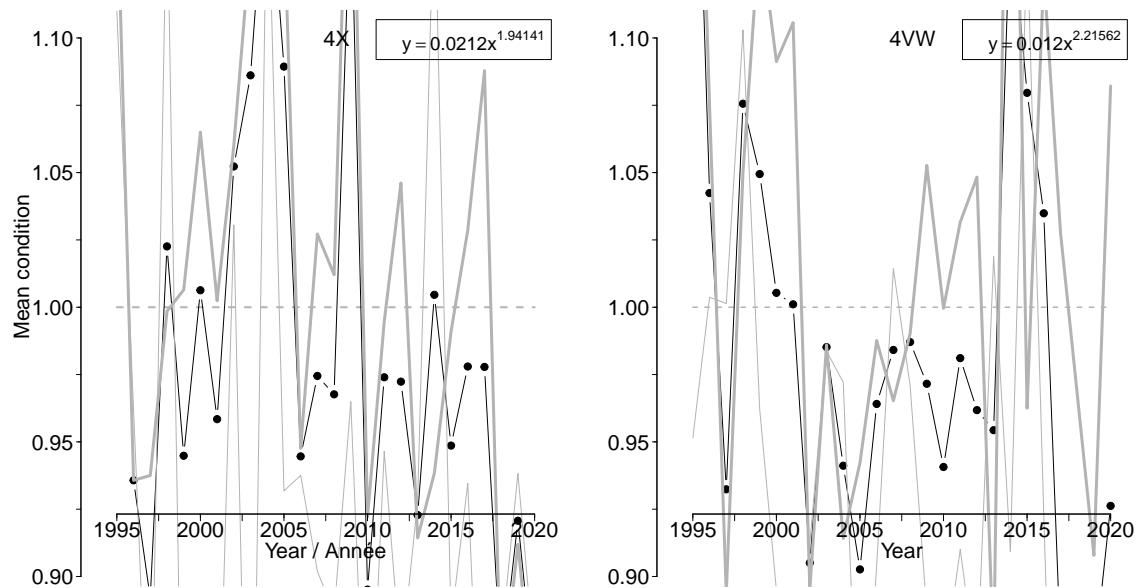

Figure 7.18D. Average fish condition in NAFO units 4X and 4VW for Alligatorfish.

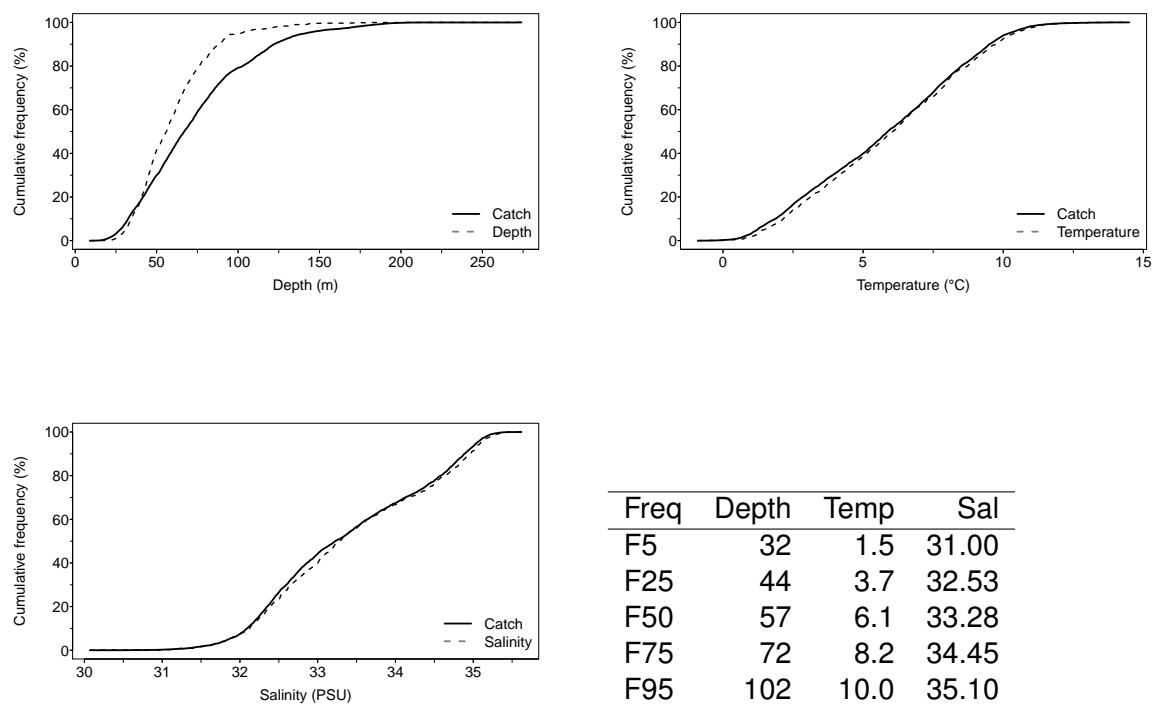

Figure 7.18E. Catch distribution by depth, temperature and salinity of Alligatorfish.

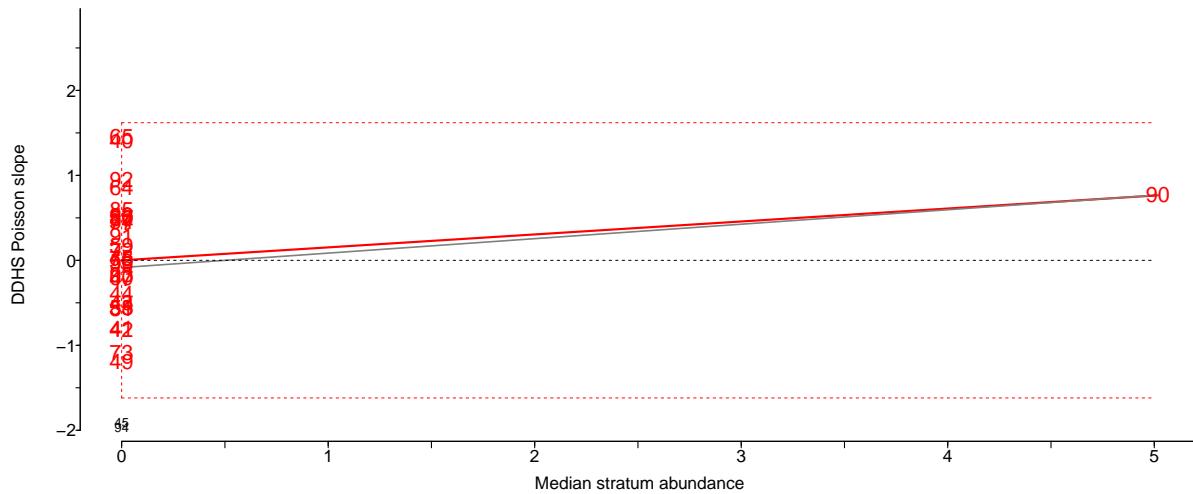

Figure 7.18F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Alligatorfish.

7.19 Monkfish (Baudroie d'Amérique) - species code 400 (category LF)

Scientific name: [Lophius americanus](#)

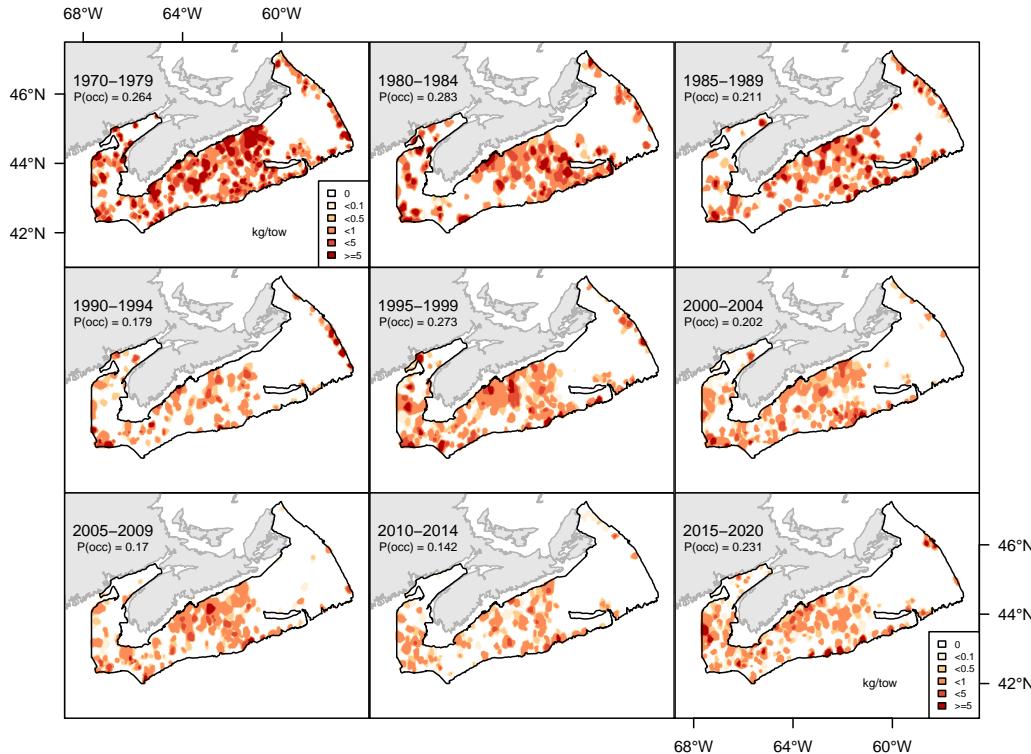

Figure 7.19A. Inverse distance weighted distribution of catch biomass (kg/tow) for Monkfish.

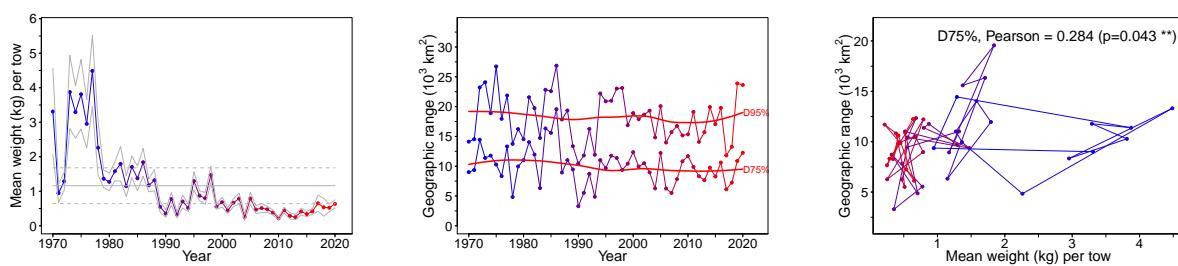

Figure 7.19B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Monkfish.

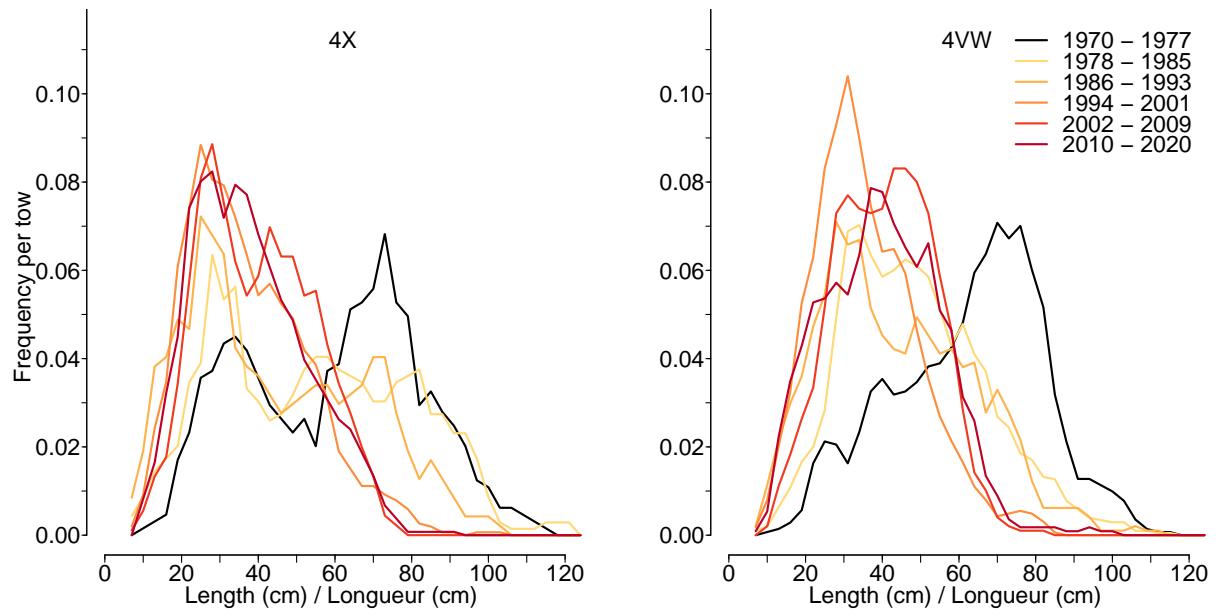

Figure 7.19C. Length frequency distribution in NAFO units 4X and 4VW for Monkfish.

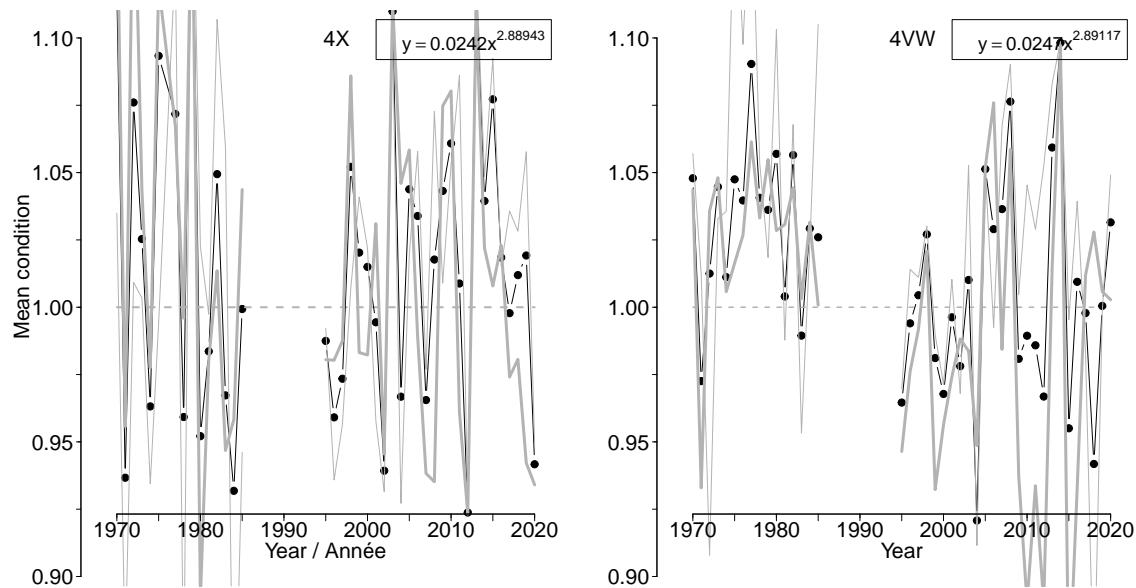

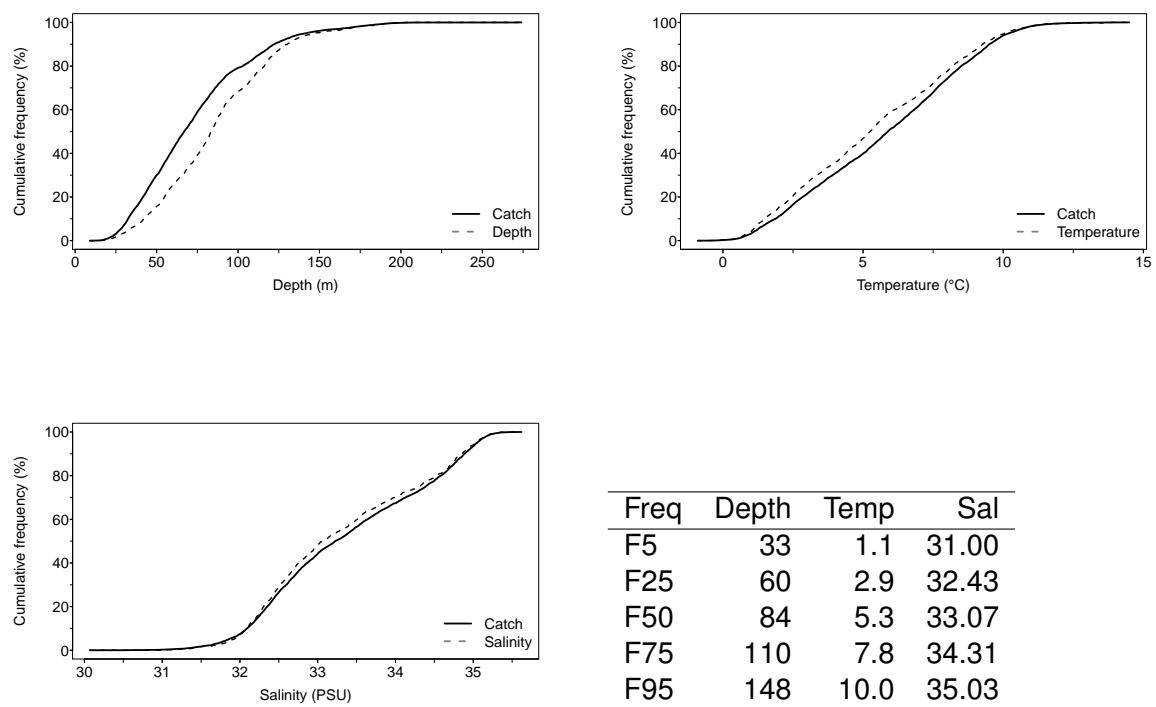

Figure 7.19D. Average fish condition in NAFO units 4X and 4VW for Monkfish.

Freq	Depth	Temp	Sal
F5	33	1.1	31.00
F25	60	2.9	32.43
F50	84	5.3	33.07
F75	110	7.8	34.31
F95	148	10.0	35.03

Figure 7.19E. Catch distribution by depth, temperature and salinity of Monkfish.

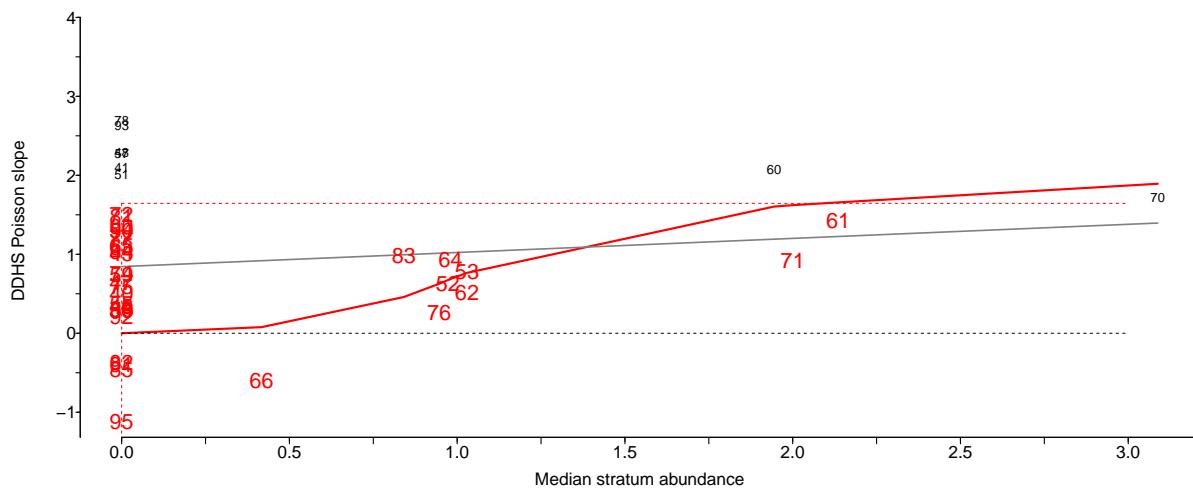

Figure 7.19F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Monkfish.

7.20 Ocean pout (Loquette d'Amérique) - species code 640 (category LF)

Scientific name: [Zoarces americanus](#)

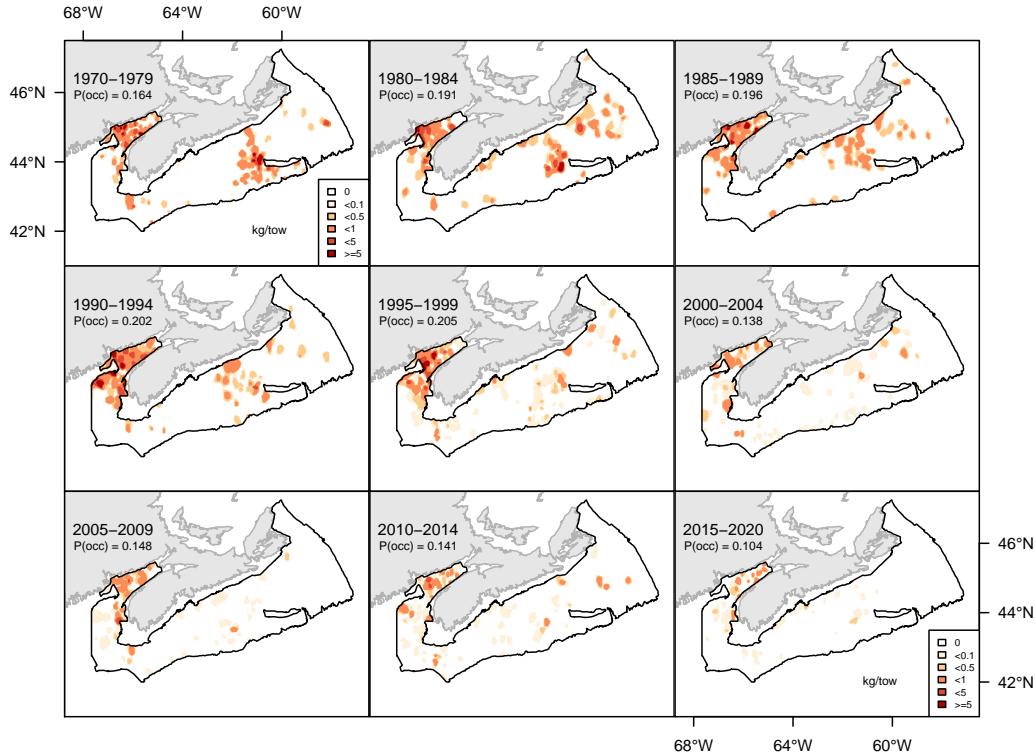

Figure 7.20A. Inverse distance weighted distribution of catch biomass (kg/tow) for Ocean pout.

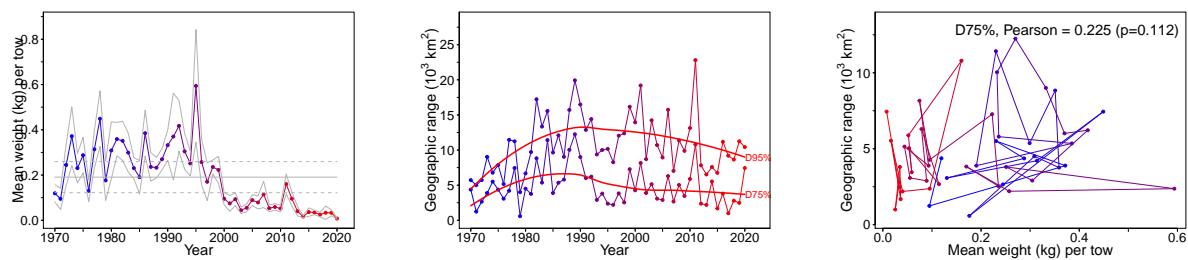

Figure 7.20B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Ocean pout.

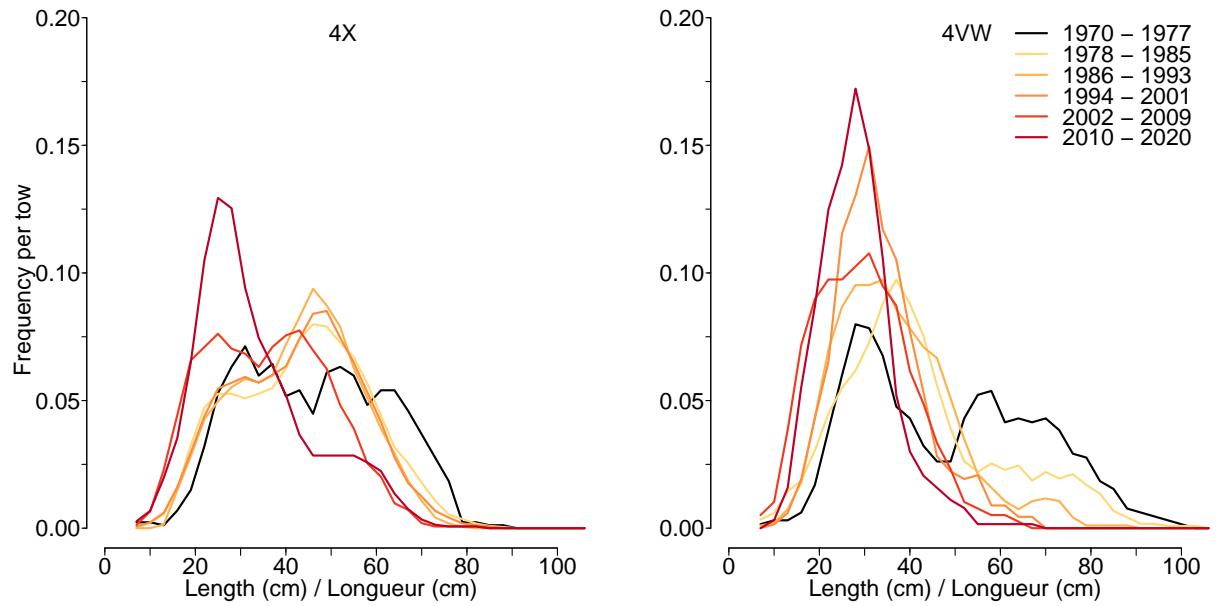

Figure 7.20C. Length frequency distribution in NAFO units 4X and 4VW for Ocean pout.

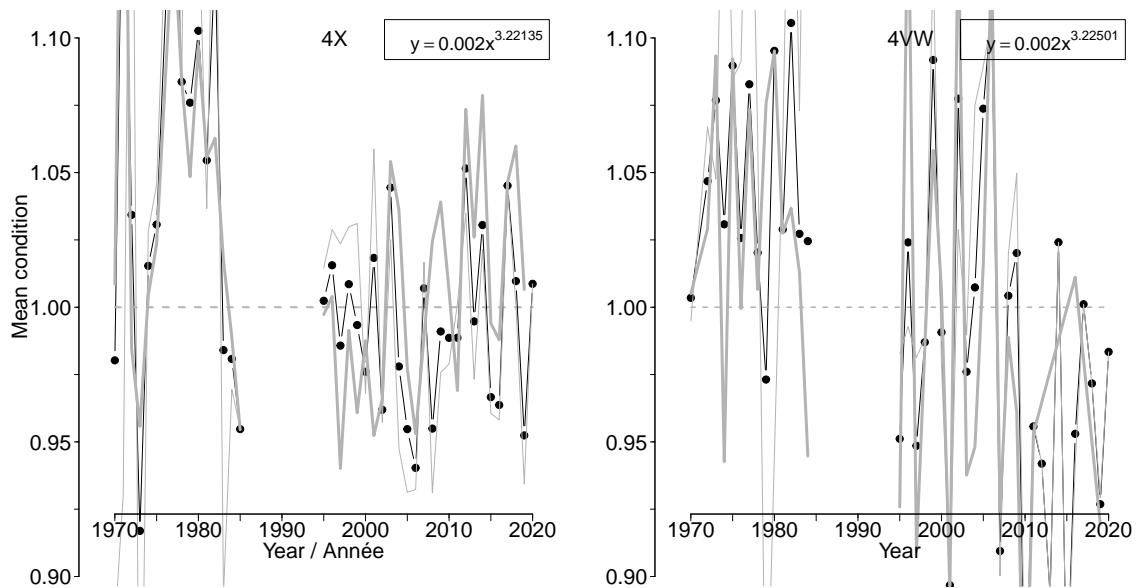

Figure 7.20D. Average fish condition in NAFO units 4X and 4VW for Ocean pout.

Figure 7.20E. Catch distribution by depth, temperature and salinity of Ocean pout.

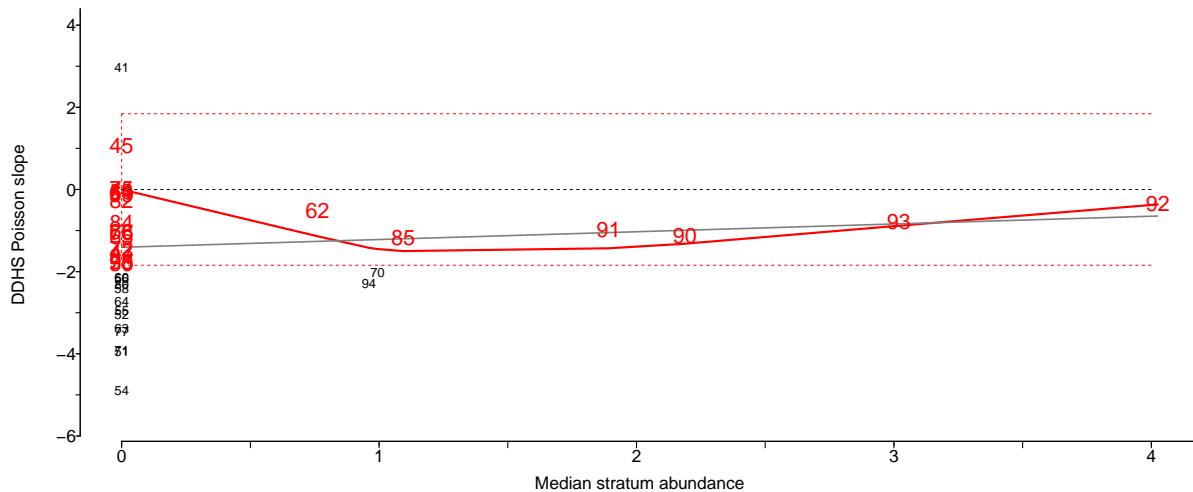

Figure 7.20F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Ocean pout.

7.21 Thorny skate (Raie épineuse) - species code 201 (category LF)

Scientific name: [Amblyraja radiata](#)

Figure 7.21A. Inverse distance weighted distribution of catch biomass (kg/tow) for Thorny skate.

Figure 7.21B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Thorny skate.

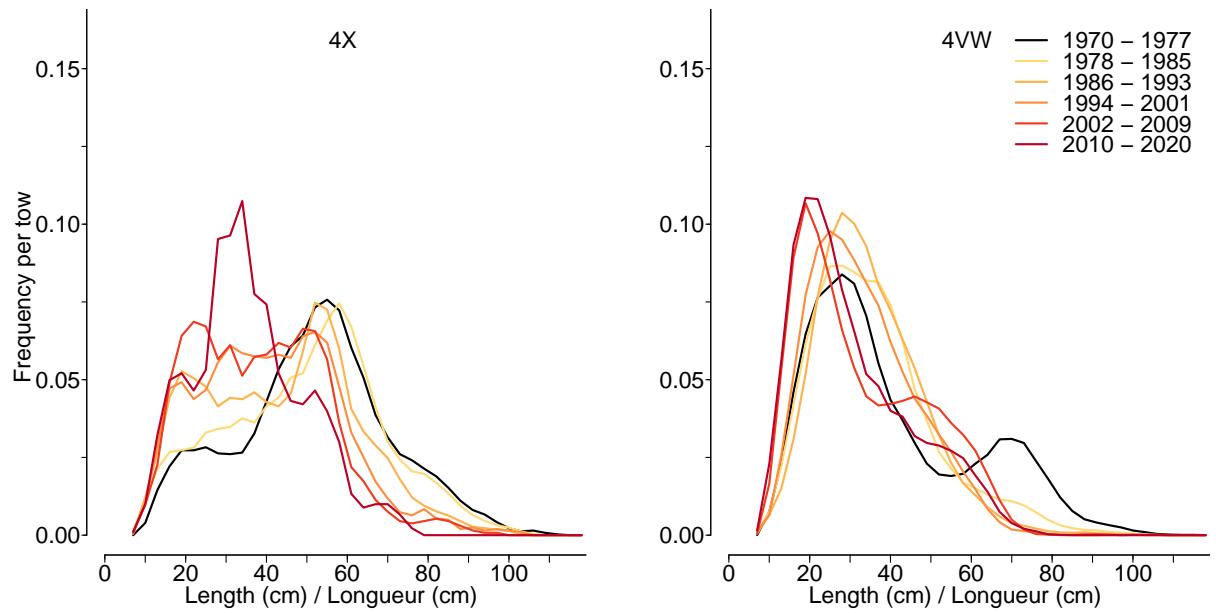

Figure 7.21C. Length frequency distribution in NAFO units 4X and 4VW for Thorny skate.

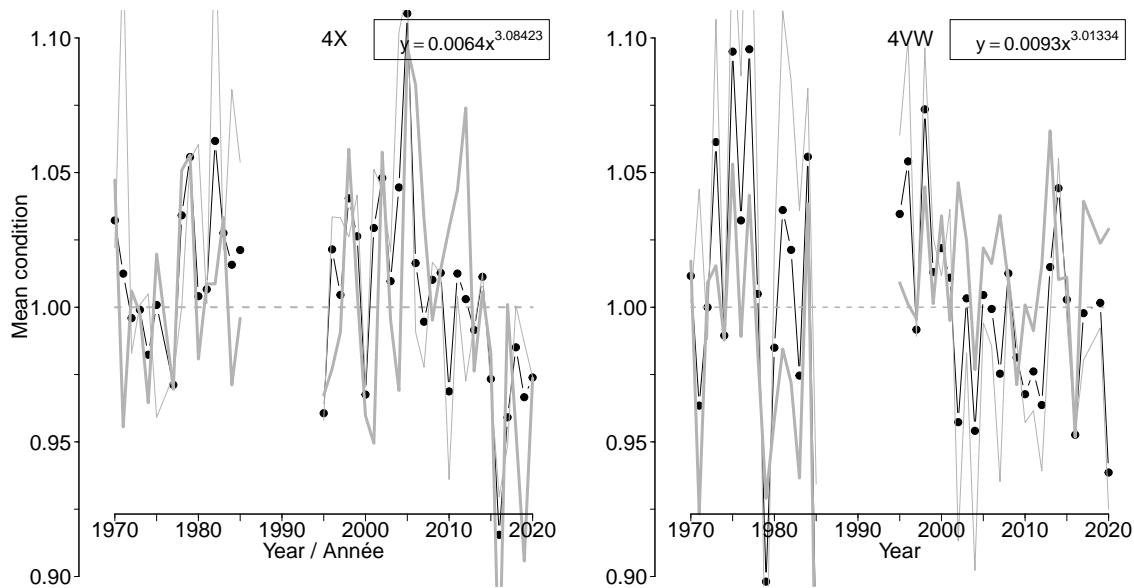

Figure 7.21D. Average fish condition in NAFO units 4X and 4VW for Thorny skate.

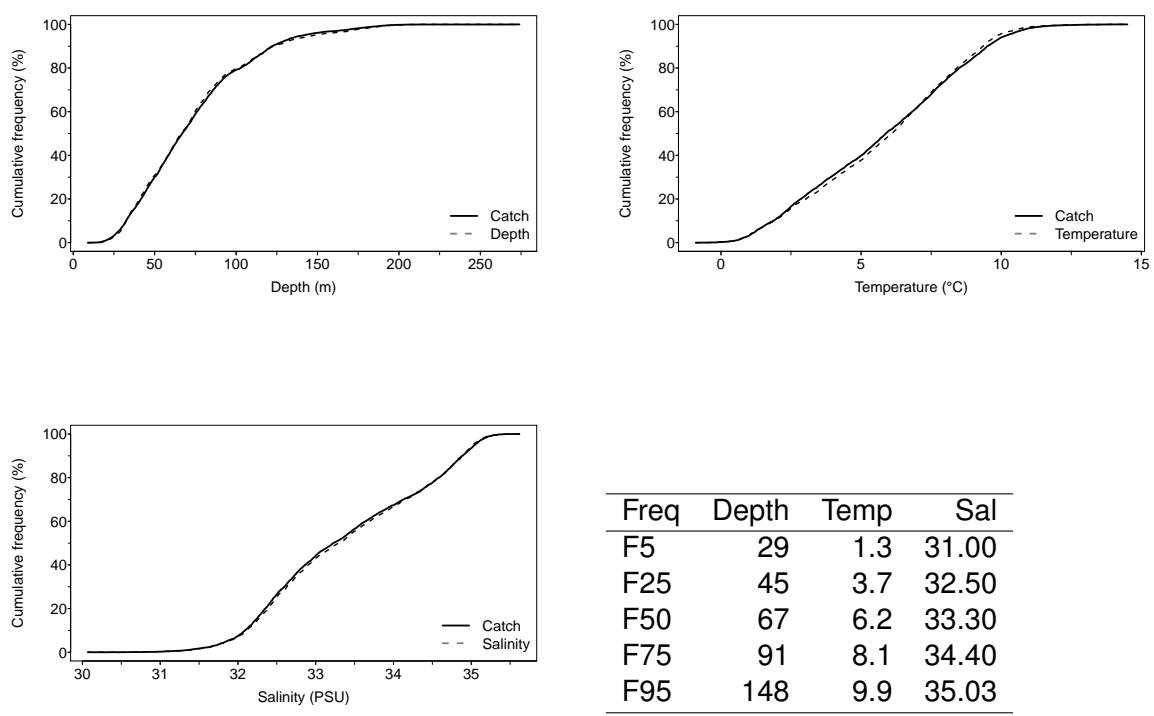

Figure 7.21E. Catch distribution by depth, temperature and salinity of Thorny skate.

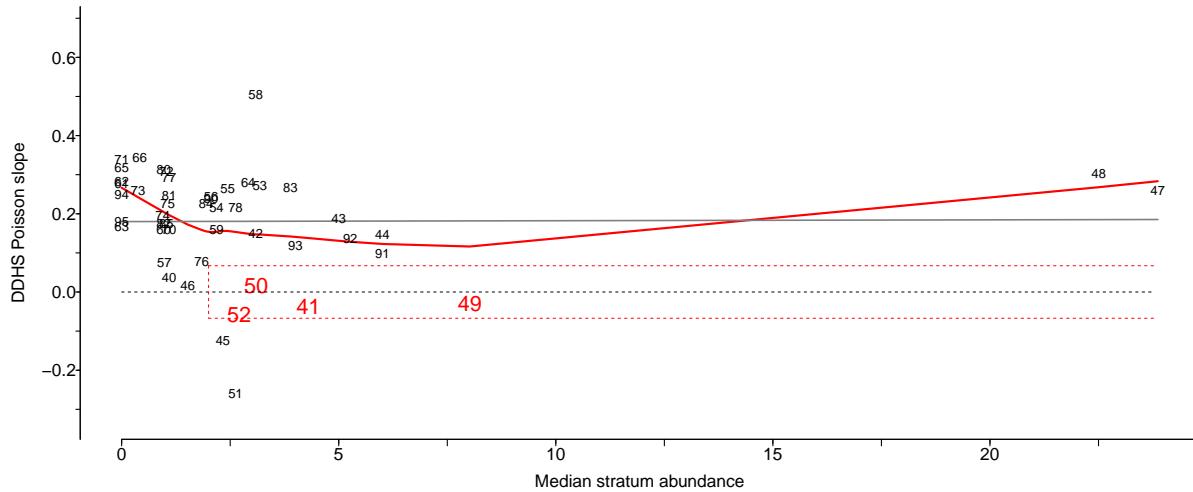

Figure 7.21F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Thorny skate.

7.22 Smooth skate (Raie lisse) - species code 202 (category LF)

Scientific name: [Malacoraja senta](#)

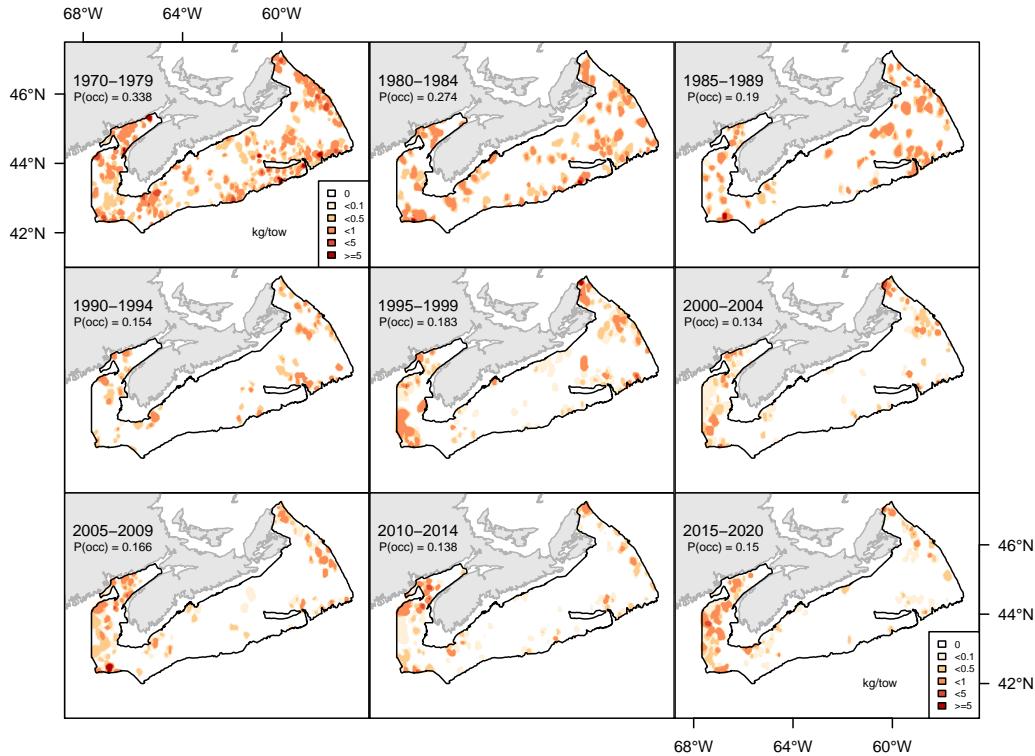

Figure 7.22A. Inverse distance weighted distribution of catch biomass (kg/tow) for Smooth skate.

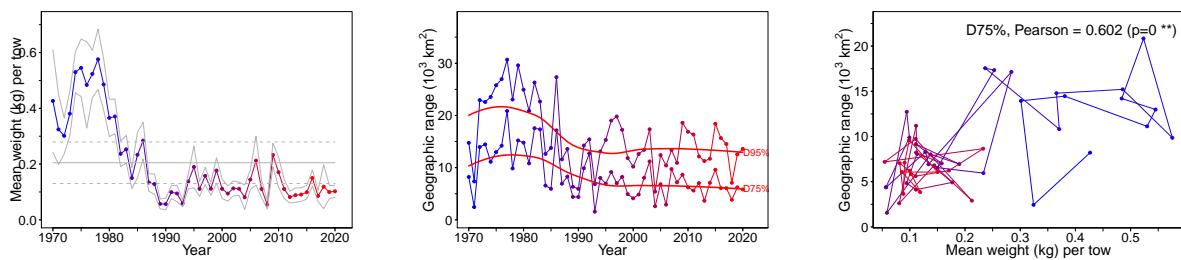

Figure 7.22B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Smooth skate.

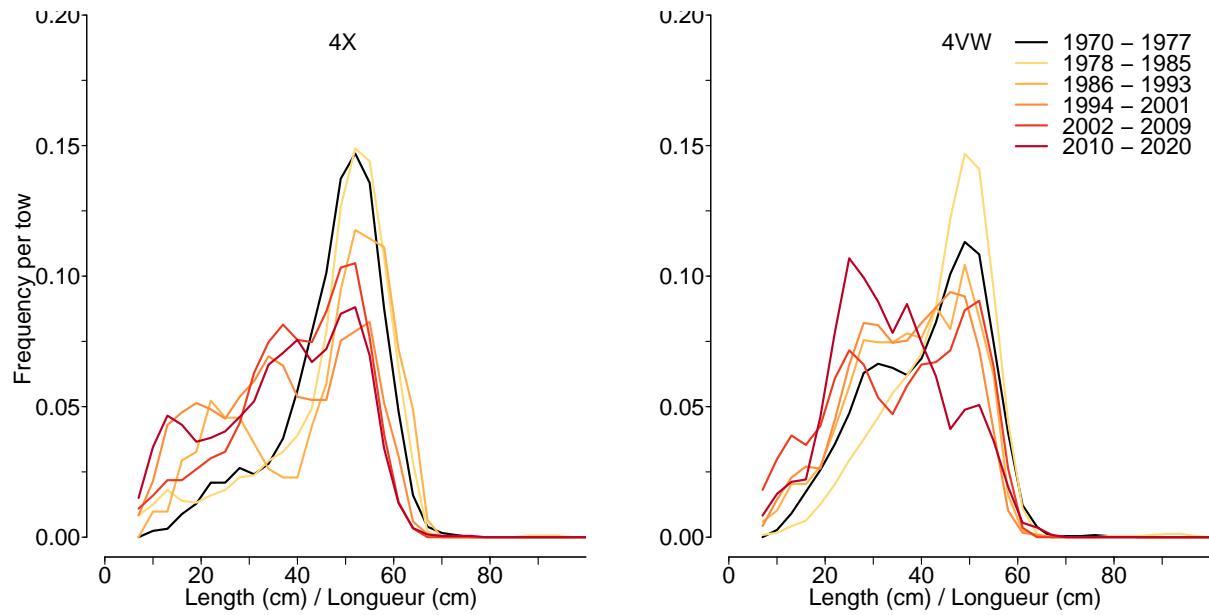

Figure 7.22C. Length frequency distribution in NAFO units 4X and 4VW for Smooth skate.

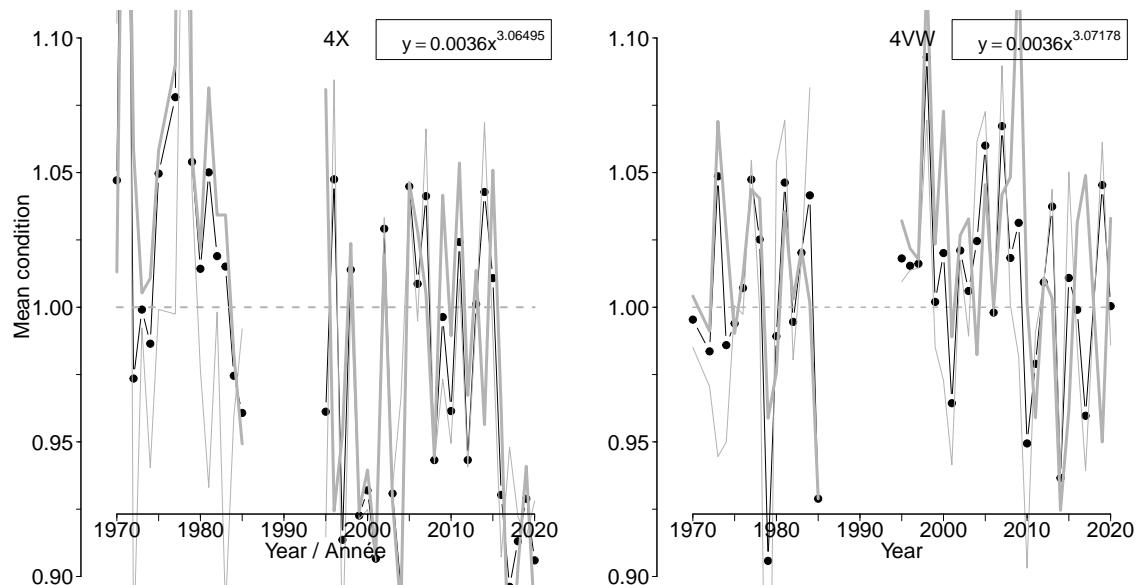

Figure 7.22D. Average fish condition in NAFO units 4X and 4VW for Smooth skate.

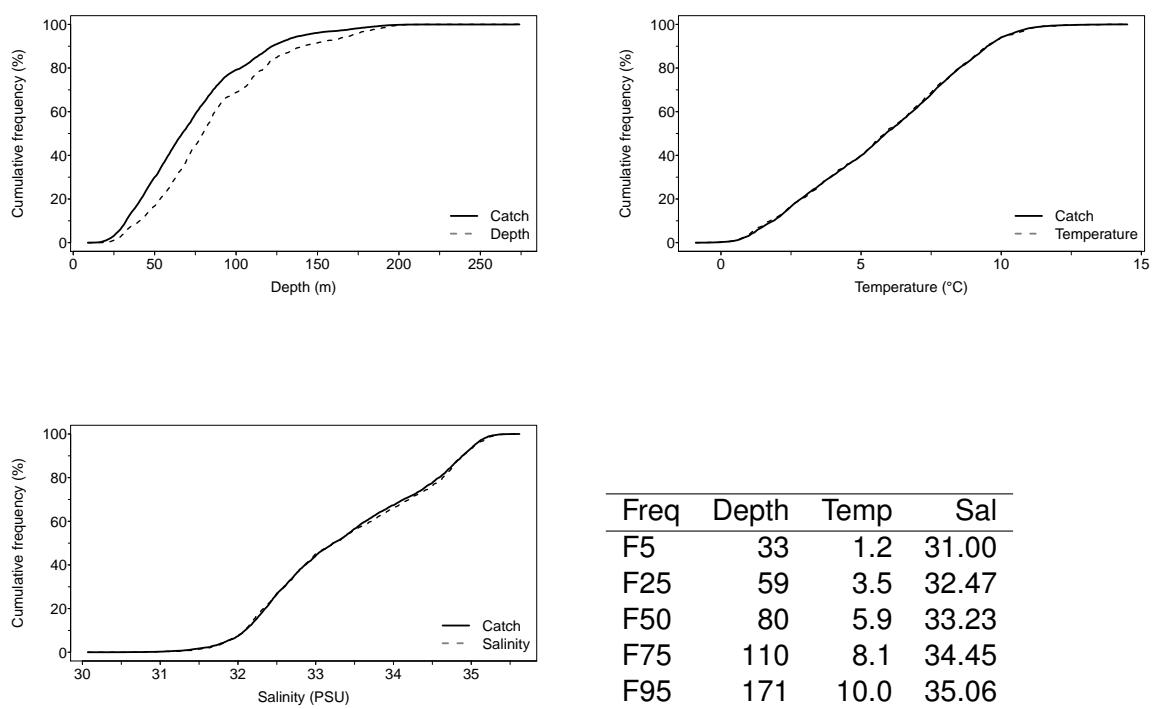

Figure 7.22E. Catch distribution by depth, temperature and salinity of Smooth skate.

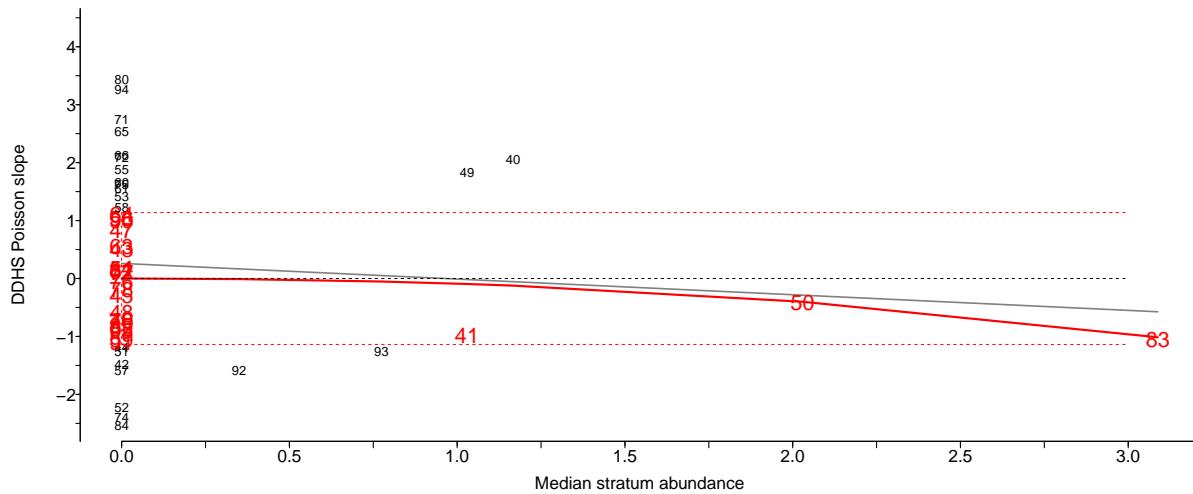

Figure 7.22F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Smooth skate.

7.23 Winter skate (Raie tachetée) - species code 204 (category LF)

Scientific name: [Leucoraja ocellata](#)

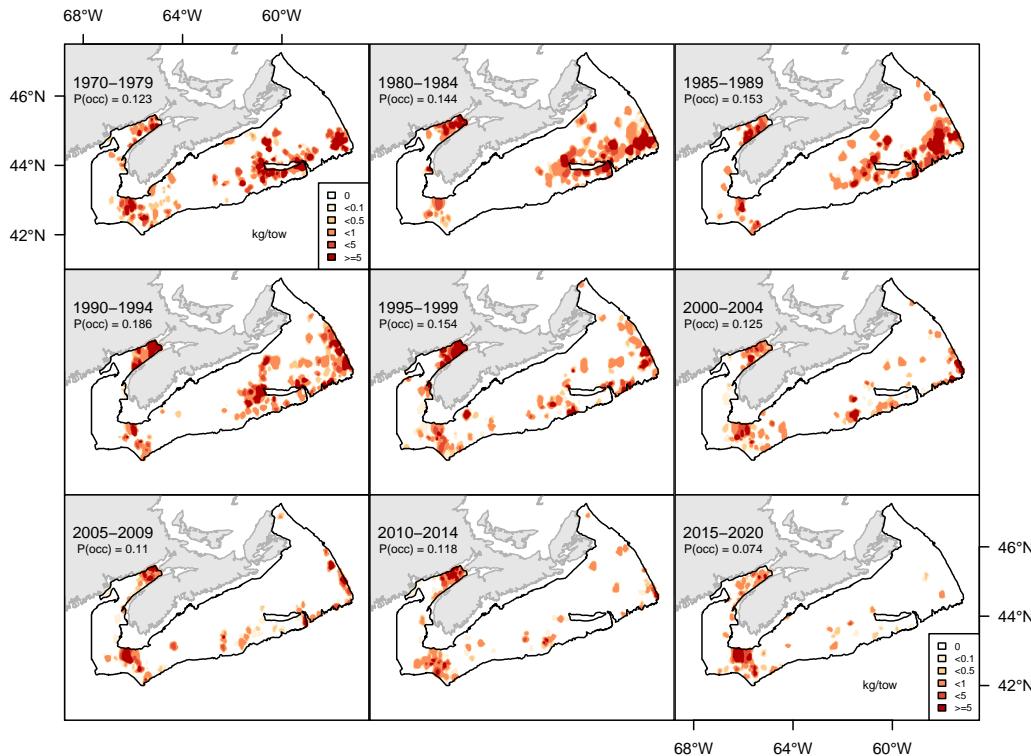

Figure 7.23A. Inverse distance weighted distribution of catch biomass (kg/tow) for Winter skate.

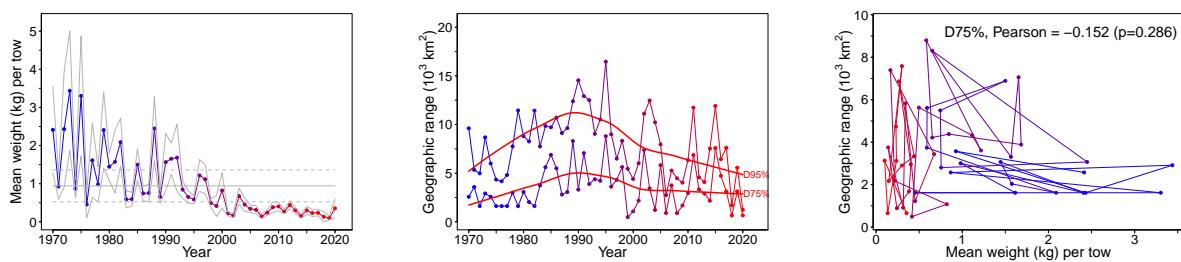

Figure 7.23B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Winter skate.

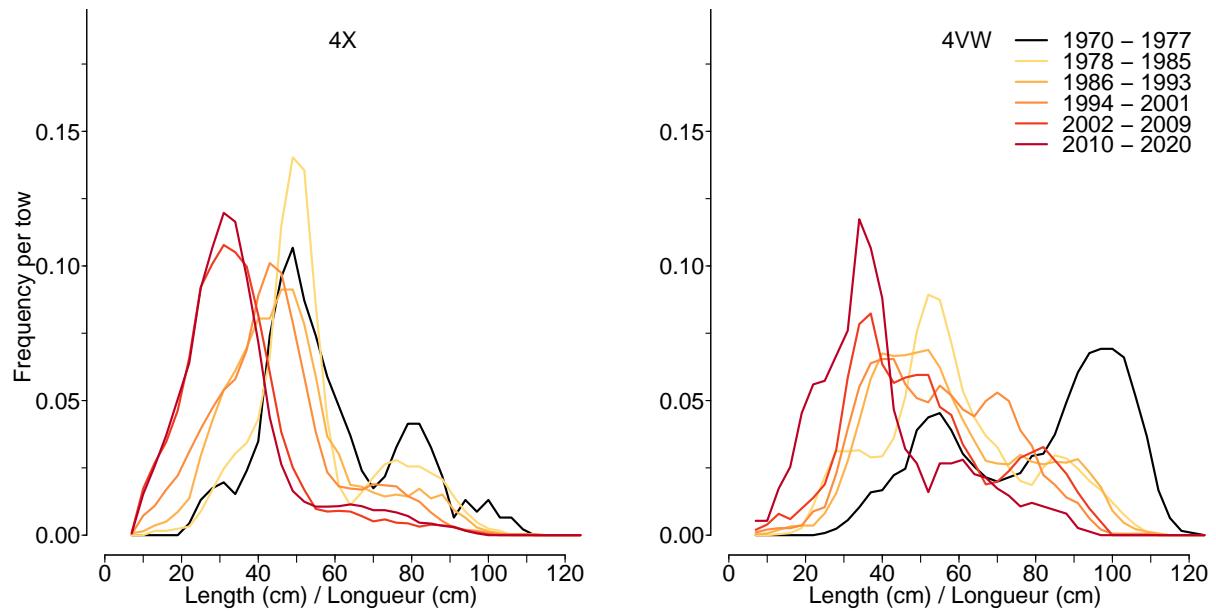

Figure 7.23C. Length frequency distribution in NAFO units 4X and 4VW for Winter skate.

Figure 7.23D. Average fish condition in NAFO units 4X and 4VW for Winter skate.

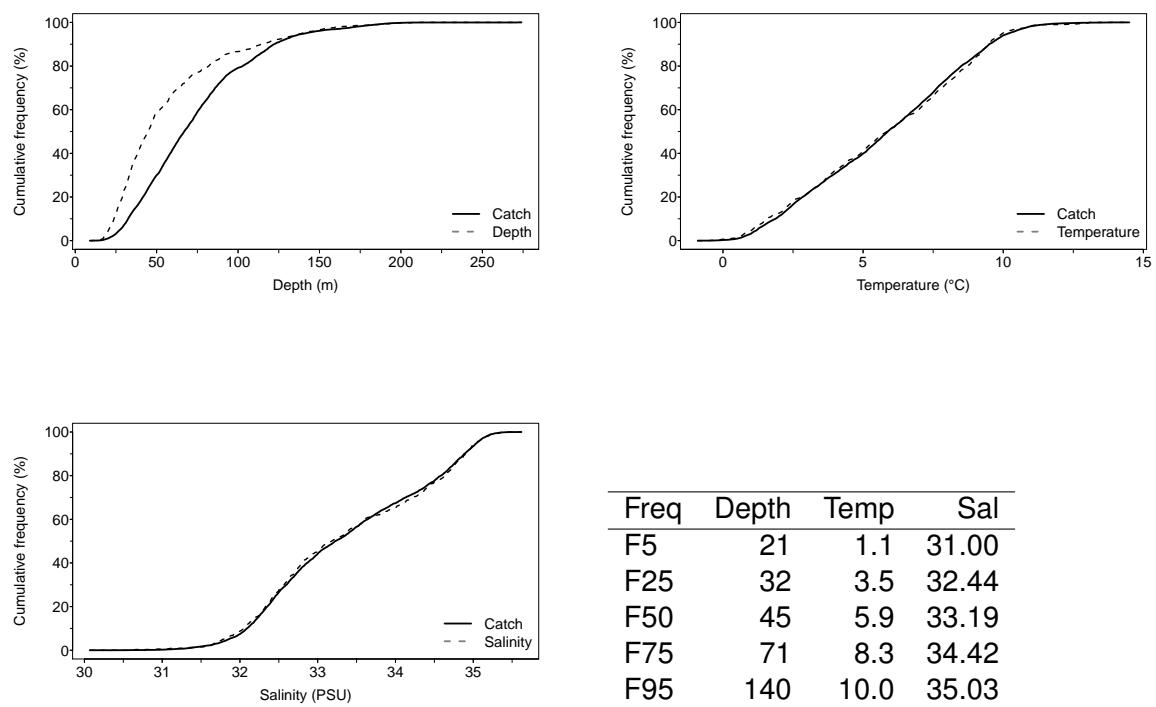

Figure 7.23E. Catch distribution by depth, temperature and salinity of Winter skate.

Figure 7.23F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Winter skate.

7.24 Picked dogfish (Aiguillat commun) - species code 220 (category LF)

Scientific name: [Squalus acanthias](#)

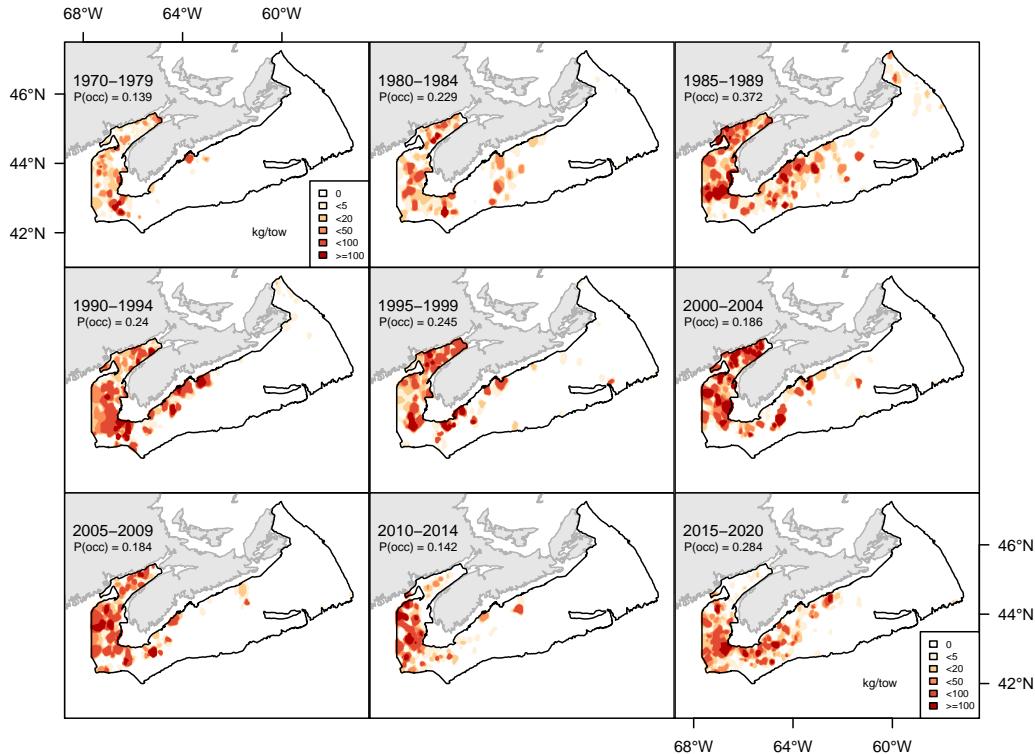

Figure 7.24A. Inverse distance weighted distribution of catch biomass (kg/tow) for Picked dogfish.

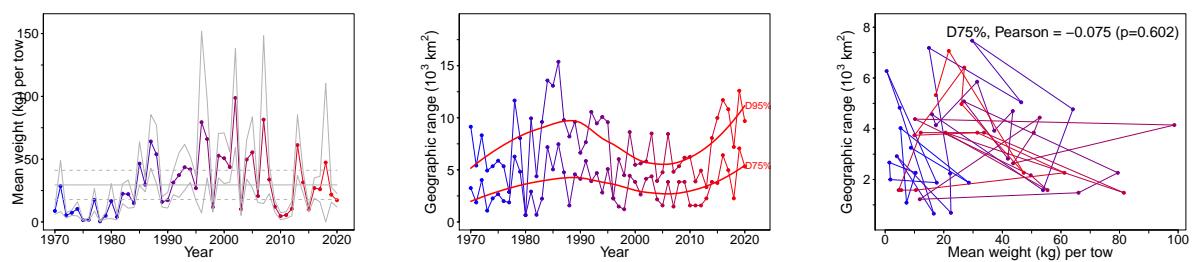

Figure 7.24B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Picked dogfish.

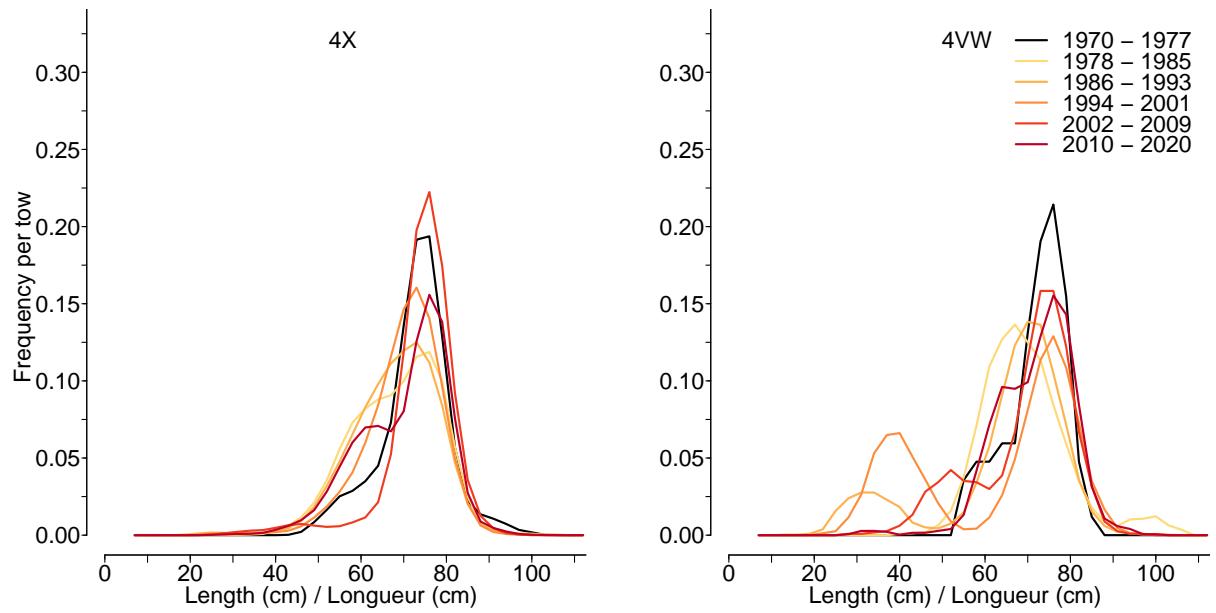

Figure 7.24C. Length frequency distribution in NAFO units 4X and 4VW for Picked dogfish.

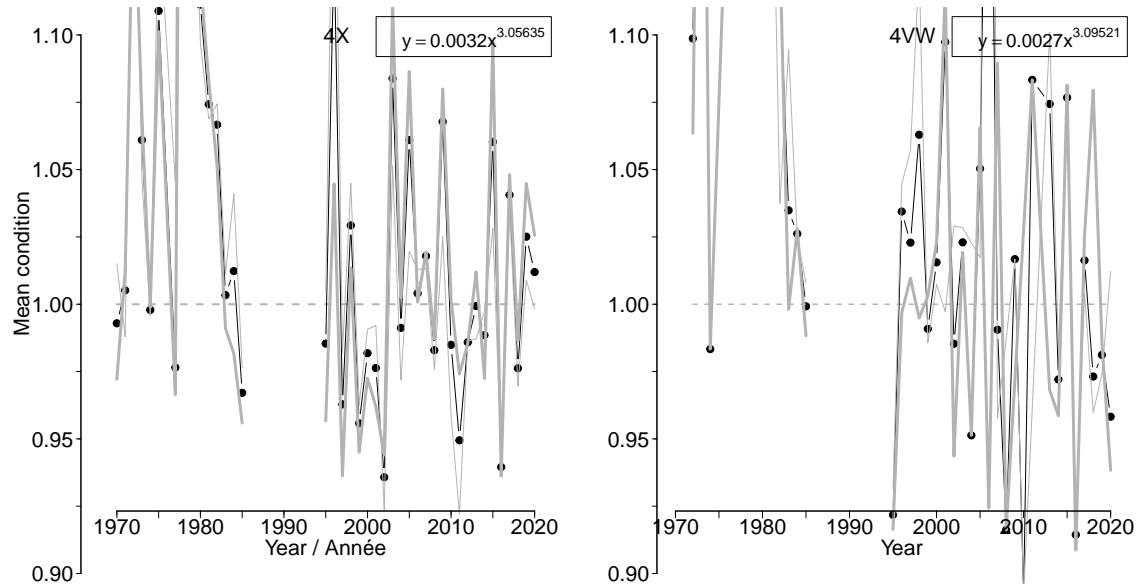

Figure 7.24D. Average fish condition in NAFO units 4X and 4VW for Picked dogfish.

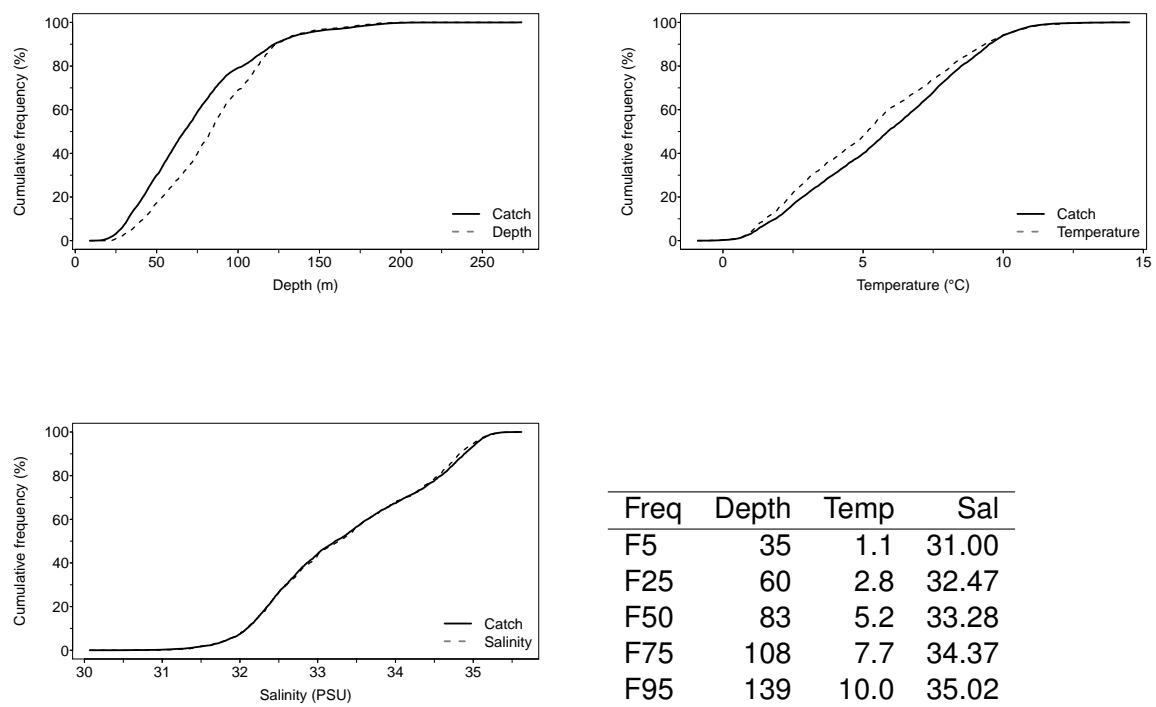

Figure 7.24E. Catch distribution by depth, temperature and salinity of Picked dogfish.

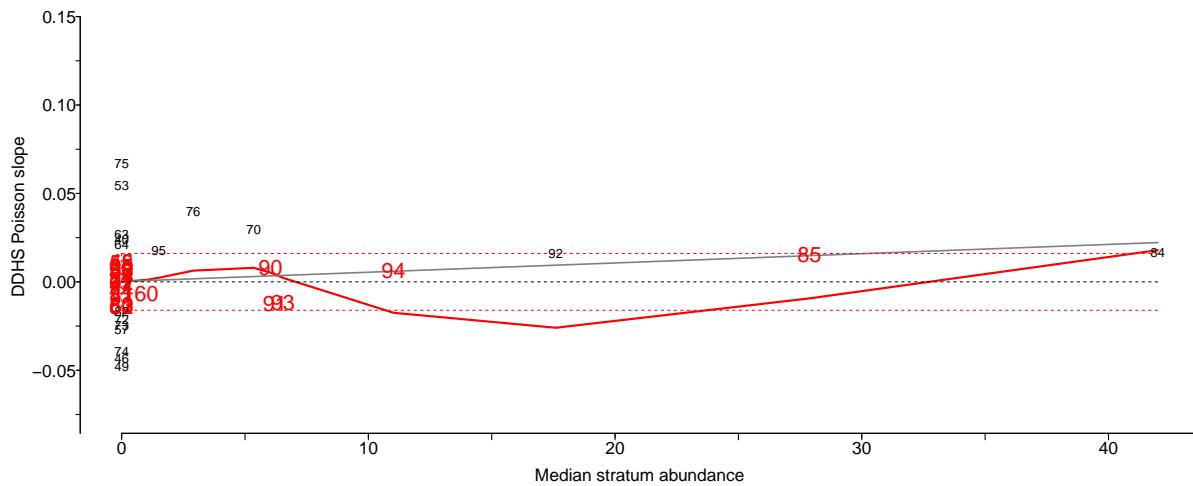

Figure 7.24F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Picked dogfish.

7.25 Northern shortfin squid (*Encornet rouge nordique*) - species code 4511 (category LF)

Scientific name: *Illex illecebrosus*

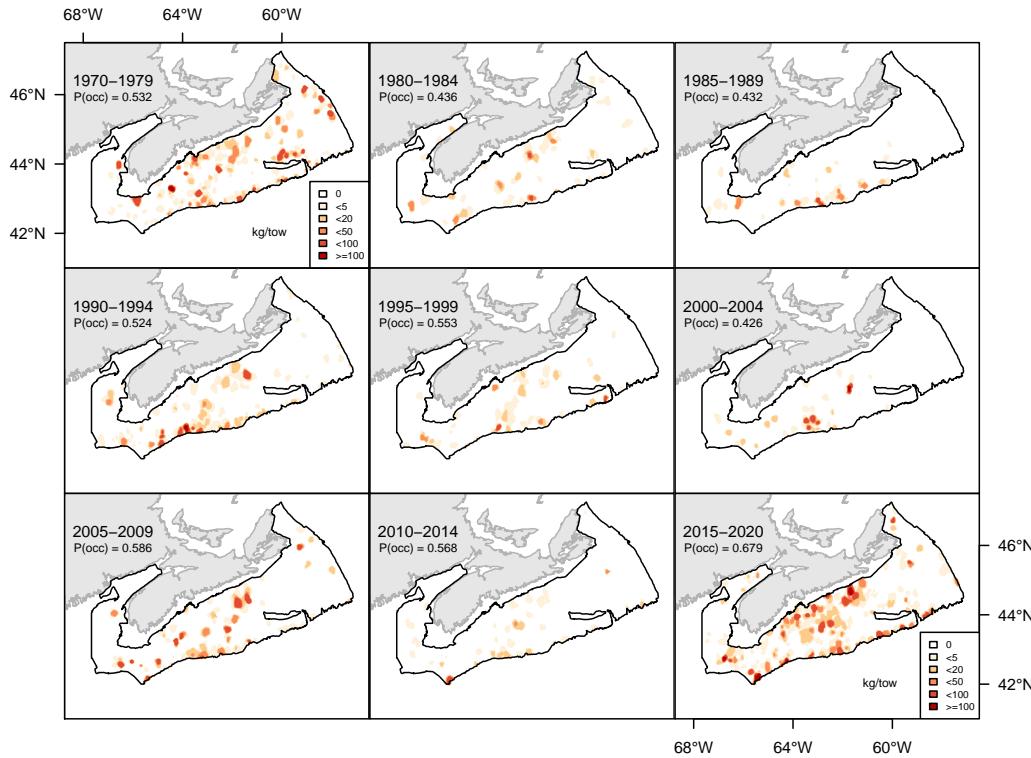

Figure 7.25A. Inverse distance weighted distribution of catch biomass (kg/tow) for Northern shortfin squid.

Figure 7.25B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Northern shortfin squid.

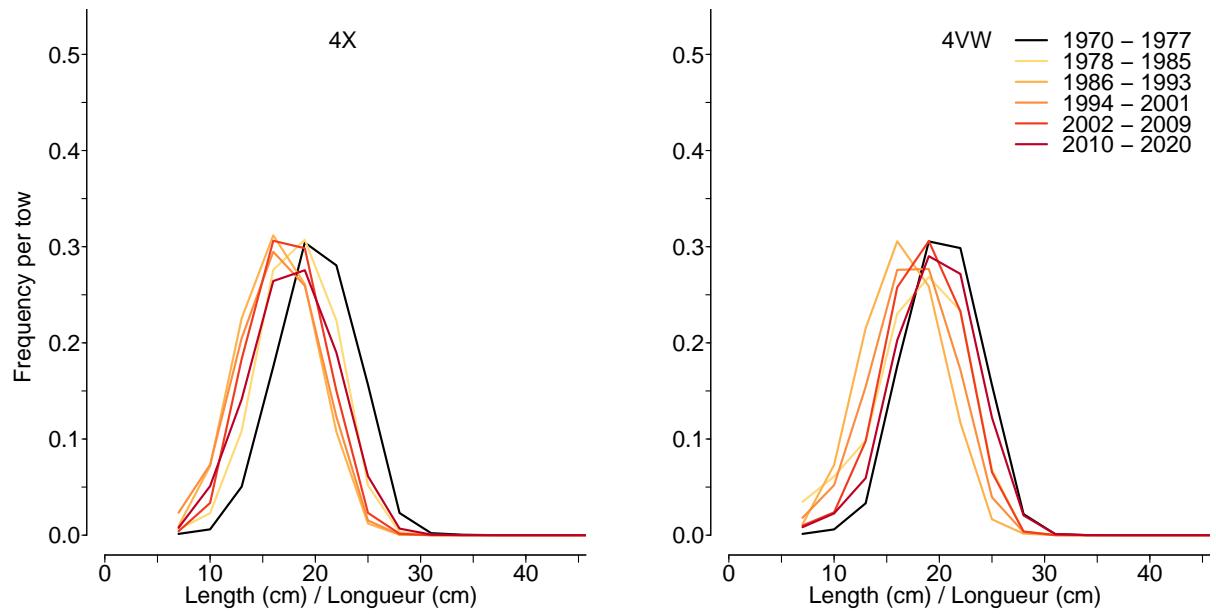

Figure 7.25C. Length frequency distribution in NAFO units 4X and 4VW for Northern shortfin squid.

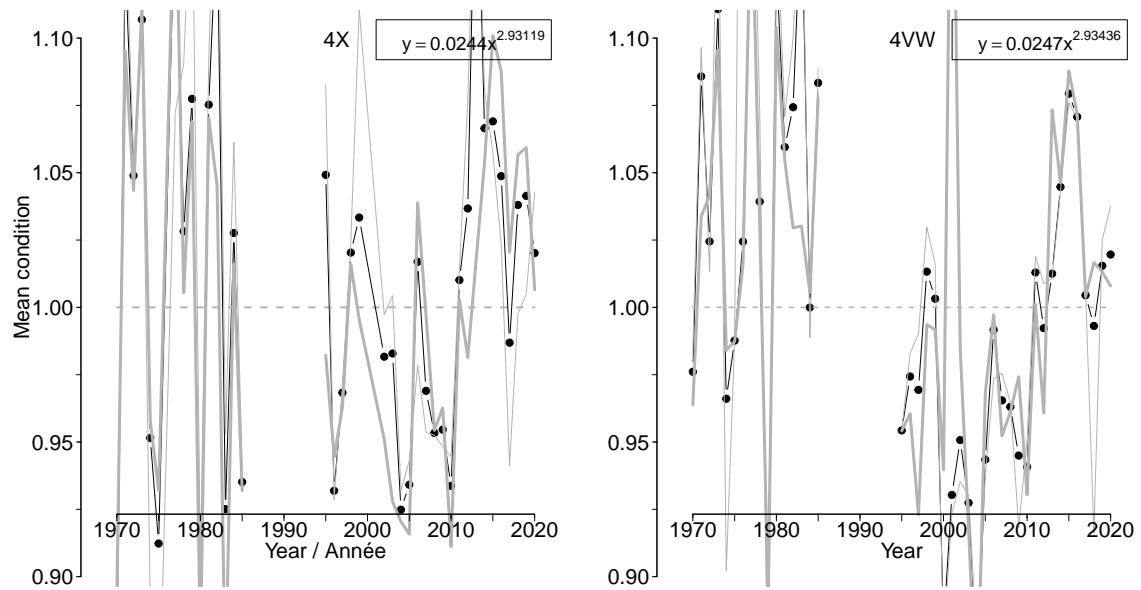

Figure 7.25D. Average fish condition in NAFO units 4X and 4VW for Northern shortfin squid.

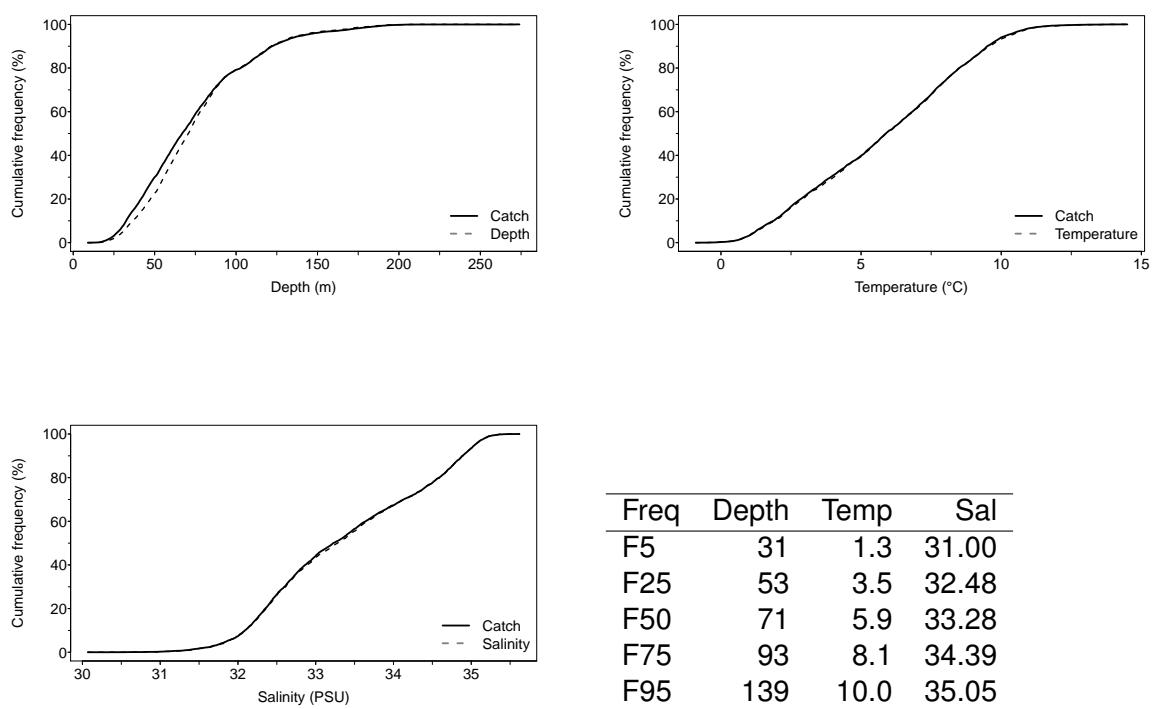

Figure 7.25E. Catch distribution by depth, temperature and salinity of Northern shortfin squid.

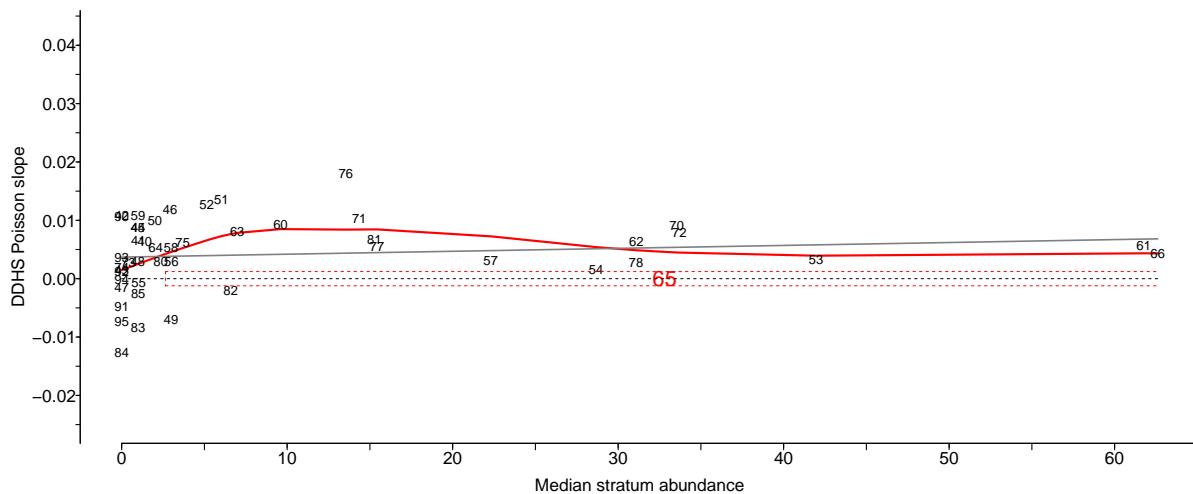

Figure 7.25F. DDHS slopes versus median stratum abundance. The last two digits of each stratum number is shown in the figure for Northern shortfin squid.

7.26 Atlantic hagfish (*Myxine du nord*) - species code 241 (category LI)

Scientific name: *Myxine glutinosa*

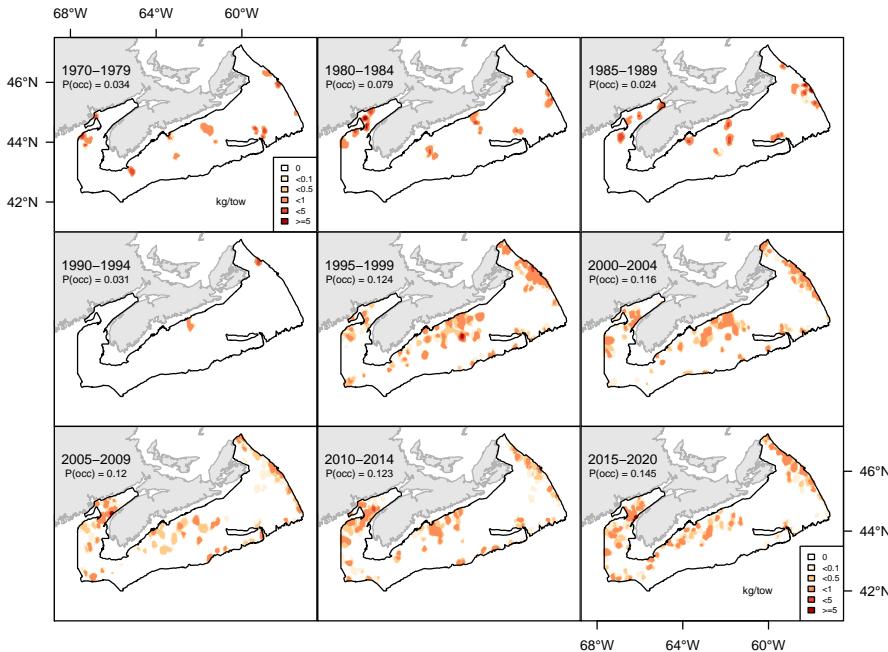

Figure 7.26A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic hagfish.

Figure 7.26B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic hagfish.

7.27 Cusk (Brosme) - species code 15 (category LI)

Scientific name: [Brosme brosme](#)

Figure 7.27A. Inverse distance weighted distribution of catch biomass (kg/tow) for Cusk.

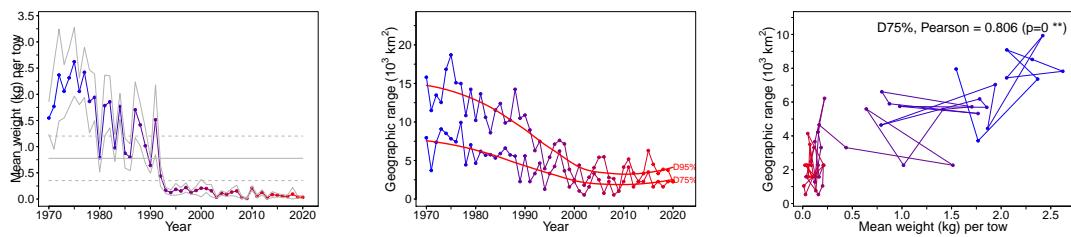

Figure 7.27B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Cusk.

7.28 Greenland halibut (Flétan noir) - species code 31 (category LI)

Scientific name: [Reinhardtius hippoglossoides](#)

Figure 7.28A. Inverse distance weighted distribution of catch biomass (kg/tow) for Greenland halibut.

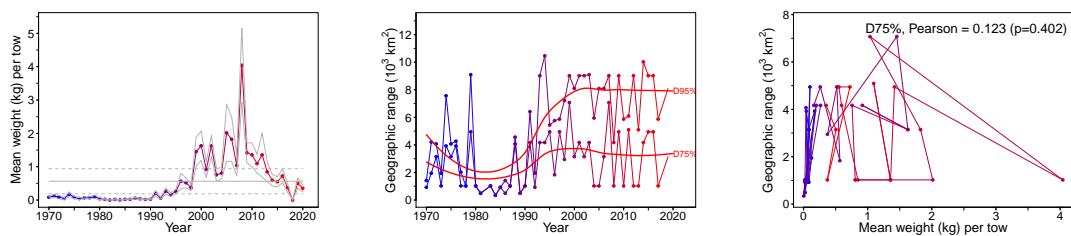

Figure 7.28B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Greenland halibut.

7.29 Gulf Stream flounder (Plie du Gulf Stream) - species code 44 (category LI)

Scientific name: [Citharichthys arctifrons](#)

Figure 7.29A. Inverse distance weighted distribution of catch biomass (kg/tow) for Gulf Stream flounder.

Figure 7.29B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Gulf Stream flounder.

7.30 American shad (*Alose savoureuse*) - species code 61 (category LI)

Scientific name: [Alosa sapidissima](#)

Figure 7.30A. Inverse distance weighted distribution of catch biomass (kg/tow) for American shad.

Figure 7.30B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of American shad.

7.31 Alewife (Gaspareau) - species code 62 (category LI)

Scientific name: [Alosa pseudoharengus](#)

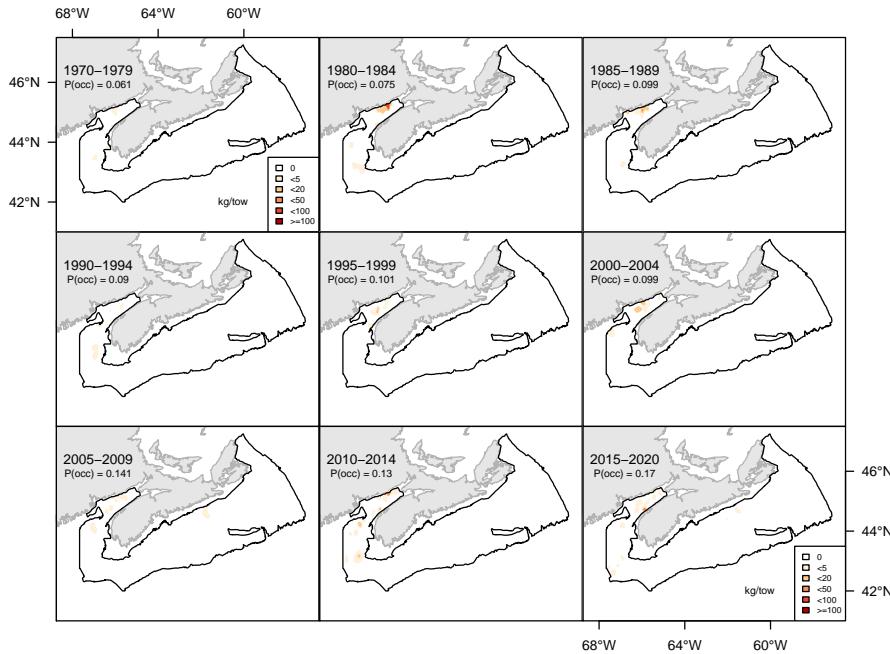

Figure 7.31A. Inverse distance weighted distribution of catch biomass (kg/tow) for Alewife.

Figure 7.31B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Alewife.

7.32 Capelin (Capelan) - species code 64 (category LI)

Scientific name: [Mallotus villosus](#)

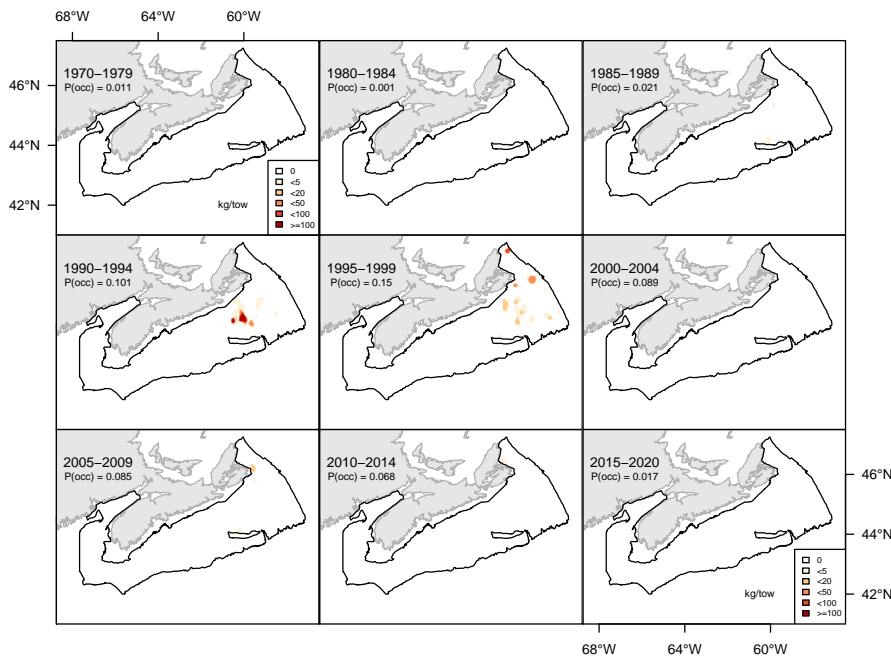

Figure 7.32A. Inverse distance weighted distribution of catch biomass (kg/tow) for Capelin.

Figure 7.32B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Capelin.

7.33 Atlantic mackerel (*Maquereau commun*) - species code 70 (category LI)

Scientific name: [Scomber scombrus](#)

Figure 7.33A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic mackerel.

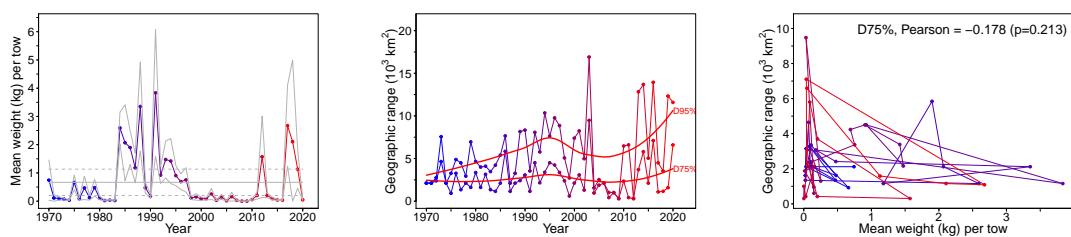

Figure 7.33B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic mackerel.

7.34 Longfin hake (Merluche à longues nageoires) - species code 112 (category LI)

Scientific name: [Phycis chesteri](#)

Figure 7.34A. Inverse distance weighted distribution of catch biomass (kg/tow) for Longfin hake.

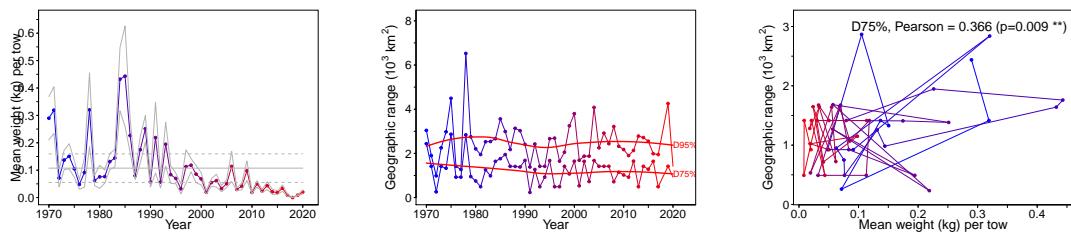

Figure 7.34B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Longfin hake.

7.35 Fourbeard rockling (Motelle à quatre barbillons) - species code 114 (category LI)

Scientific name: [Enchelyopus cimbrius](#)

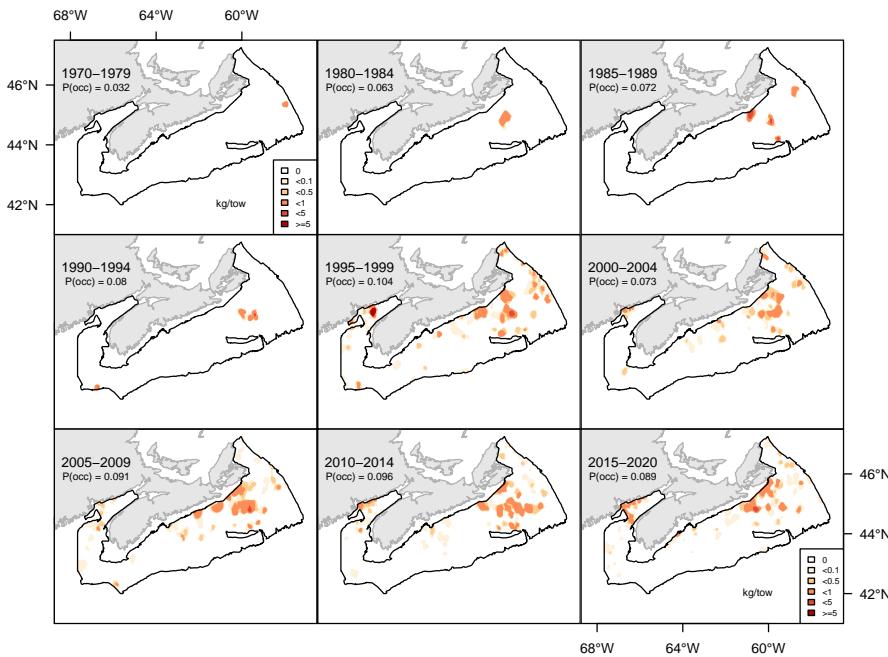

Figure 7.35A. Inverse distance weighted distribution of catch biomass (kg/tow) for Fourbeard rockling.

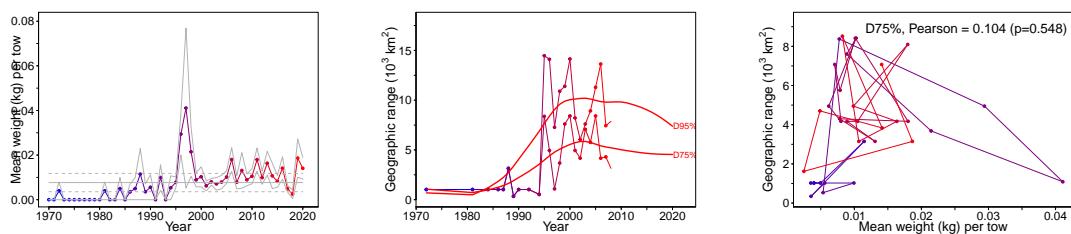

Figure 7.35B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Fourbeard rockling.

7.36 Blackbelly rosefish (Sébaste chèvre) - species code 123 (category LI)

Scientific name: [Helicolenus dactylopterus](#)

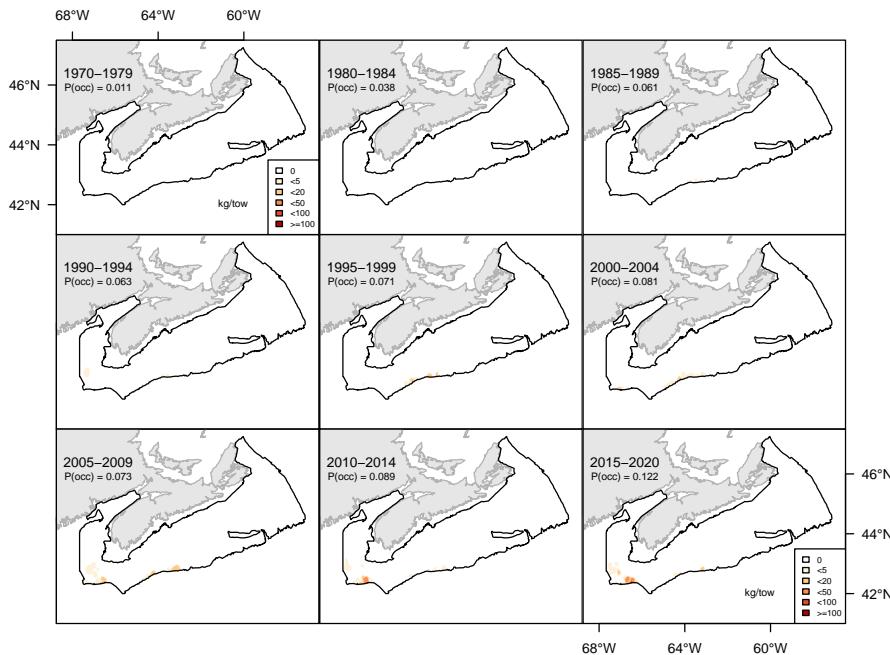

Figure 7.36A. Inverse distance weighted distribution of catch biomass (kg/tow) for Blackbelly rosefish.

Figure 7.36B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Blackbelly rosefish.

7.37 Greater argentine (Grande argentine) - species code 160 (category LI)

Scientific name: [Argentina silus](#)

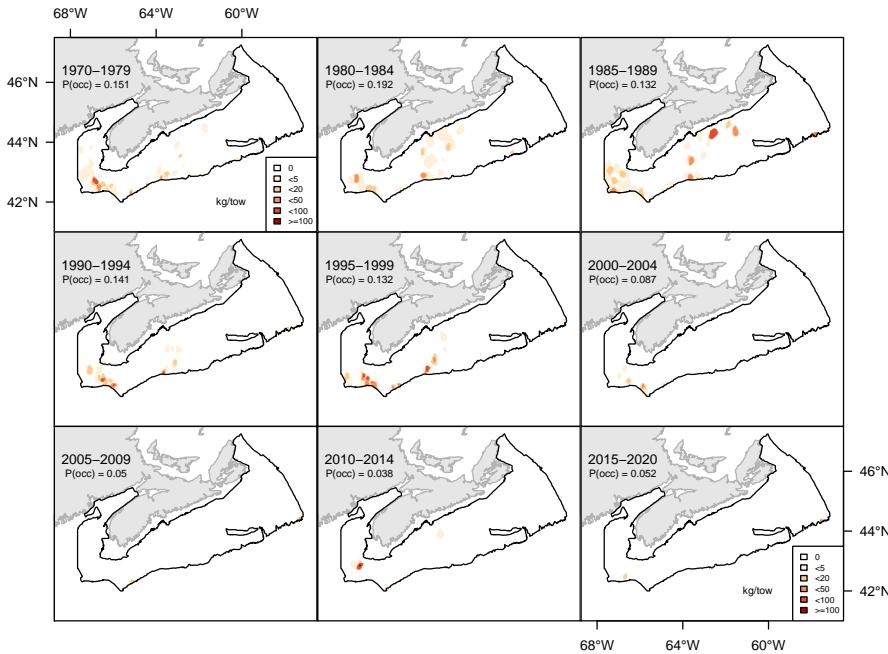

Figure 7.37A. Inverse distance weighted distribution of catch biomass (kg/tow) for Greater argentine.

Figure 7.37B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Greater argentine.

7.38 Arctic hookear sculpin (*Hameçon neigeux*) - species code 306 (category LI)

Scientific name: [Artediellus uncinatus](#)

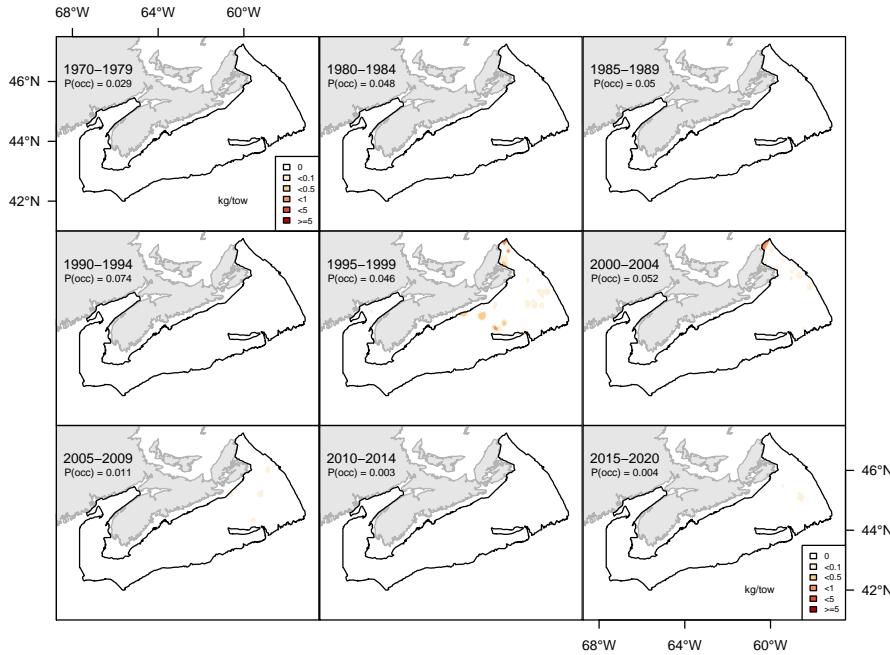

Figure 7.38A. Inverse distance weighted distribution of catch biomass (kg/tow) for Arctic hookear sculpin.

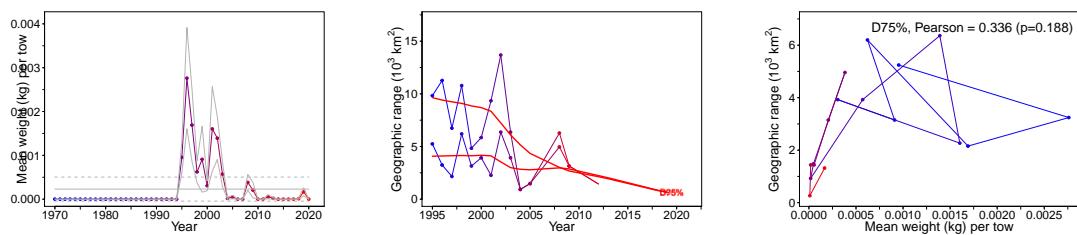

Figure 7.38B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Arctic hookear sculpin.

7.39 Atlantic poacher (*Agone atlantique*) - species code 350 (category LI)

Scientific name: [Leptagonus decagonus](#)

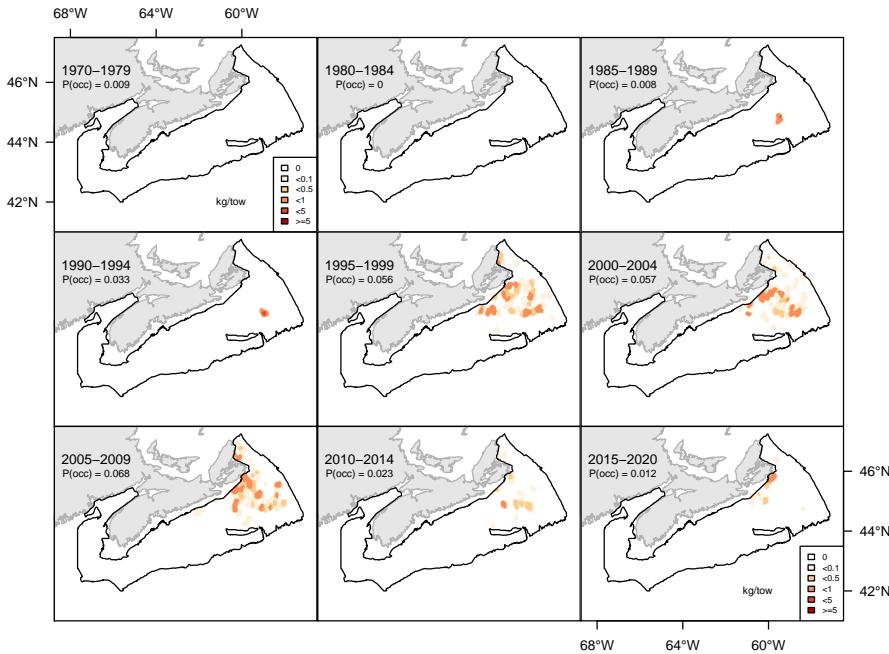

Figure 7.39A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic poacher.

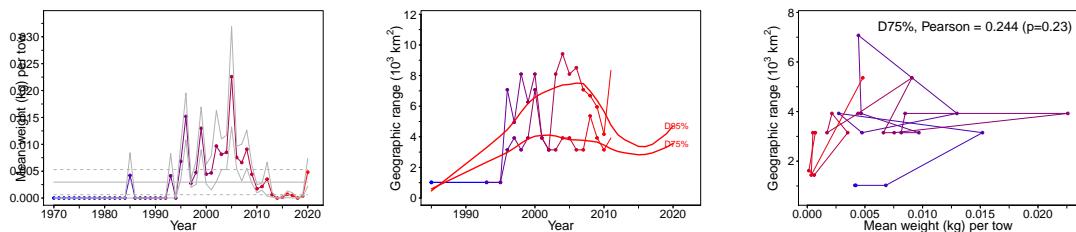

Figure 7.39B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic poacher.

7.40 Marlin-spike grenadier (Grenadier du Grand Banc) - species code 410 (category LI)

Scientific name: [Nezumia bairdii](#)

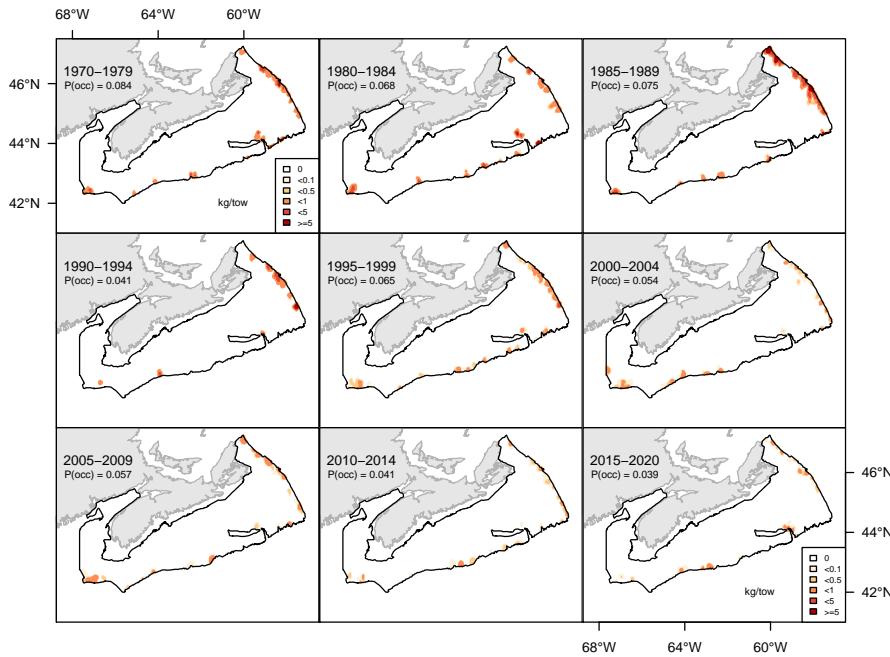

Figure 7.40A. Inverse distance weighted distribution of catch biomass (kg/tow) for Marlin-spike grenadier.

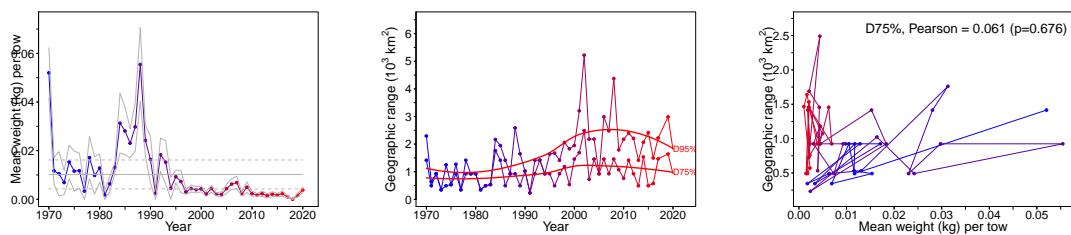

Figure 7.40B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Marlin-spike grenadier.

7.41 Lumpfish (Lompe) - species code 501 (category LI)

Scientific name: [Cyclopterus lumpus](#)

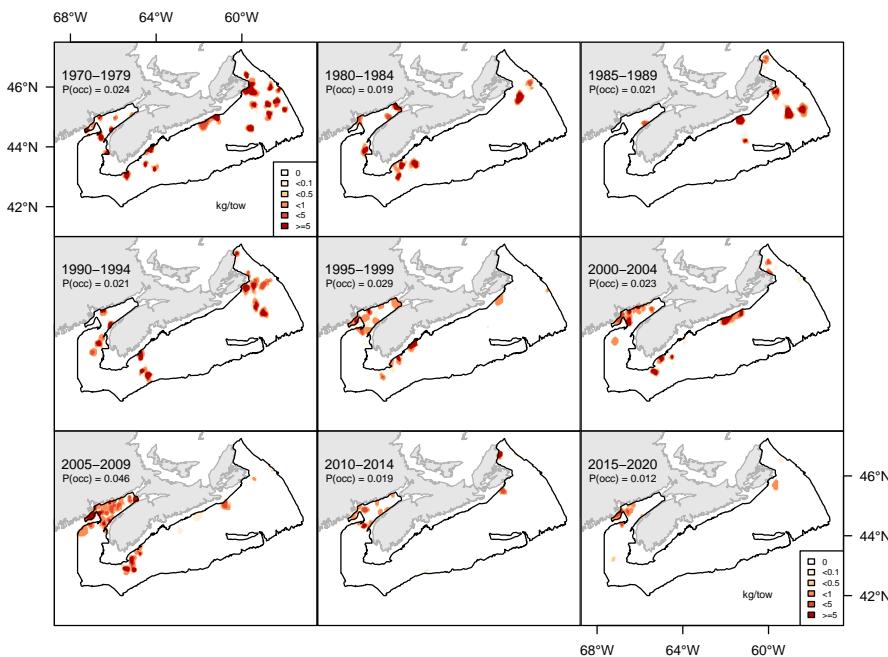

Figure 7.41A. Inverse distance weighted distribution of catch biomass (kg/tow) for Lumpfish.

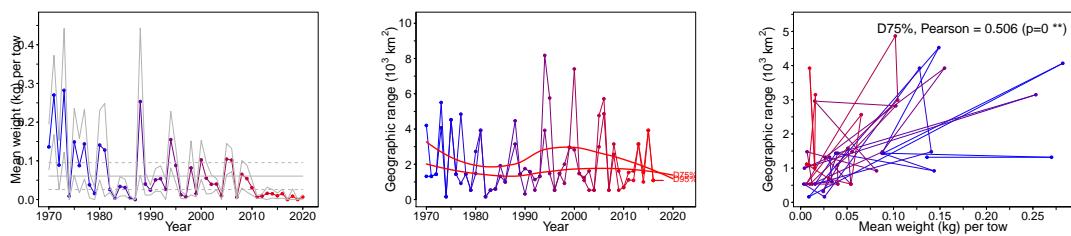

Figure 7.41B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Lumpfish.

7.42 Atlantic spiny lumpsucker (Petite poule de mer atlantique) - species code 502 (category LI)

Scientific name: [Eumicrotremus spinosus](#)

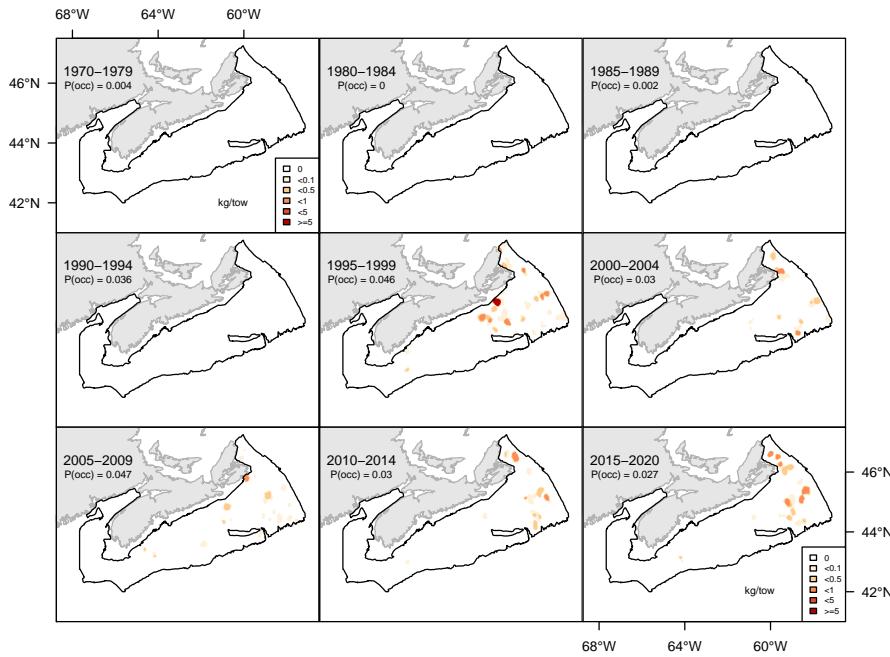

Figure 7.42A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic spiny lumpsucker.

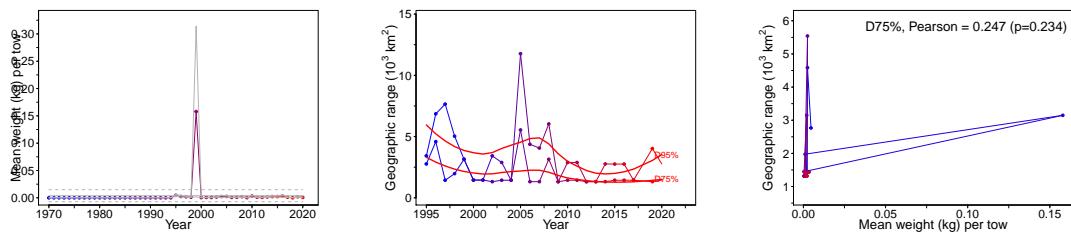

Figure 7.42B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic spiny lumpsucker.

7.43 Sand lance (Lançon) - species code 610 (category LI)

Scientific name: [Ammodytes dubius](#)

Figure 7.43A. Inverse distance weighted distribution of catch biomass (kg/tow) for Sand lance.

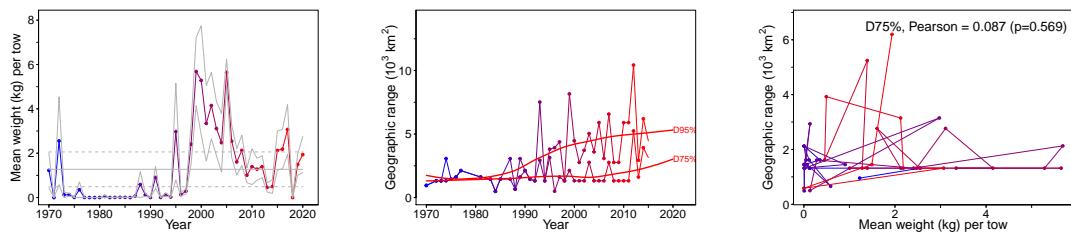

Figure 7.43B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Sand lance.

7.44 Snakeblenny (Lompénie-serpent) - species code 622 (category LI)

Scientific name: [Lumpenus lampretaeformis](#)

Figure 7.44A. Inverse distance weighted distribution of catch biomass (kg/tow) for Snakeblenny.

Figure 7.44B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Snakeblenny.

7.45 Daubed shanny (Lompénie tachetée) - species code 623 (category LI)

Scientific name: [Leptoclinus maculatus](#)

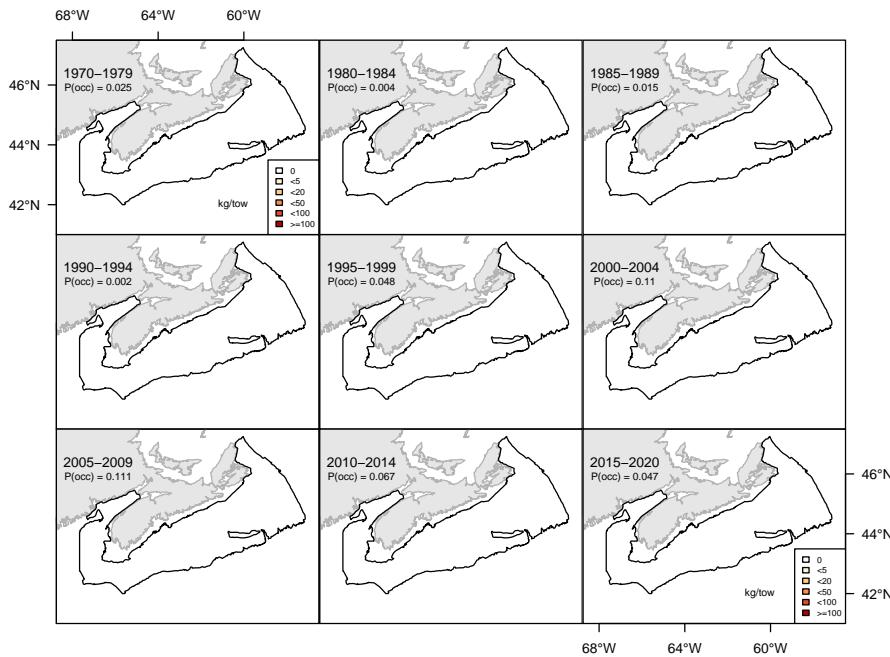

Figure 7.45A. Inverse distance weighted distribution of catch biomass (kg/tow) for Daubed shanny.

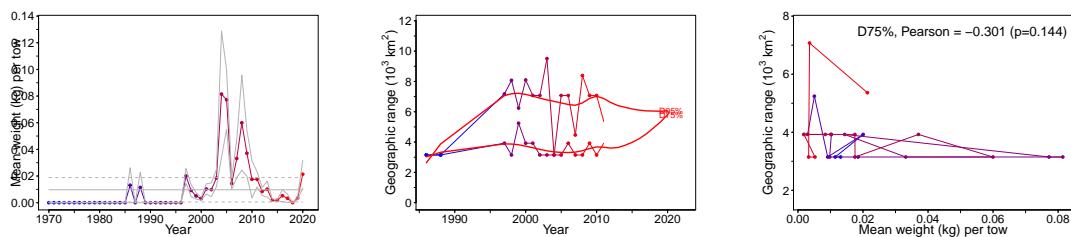

Figure 7.45B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Daubed shanny.

7.46 Vahl's eelpout (*Lycodes vahlii*) - species code 647 (category LI)

Scientific name: [Lycodes vahlii](#)

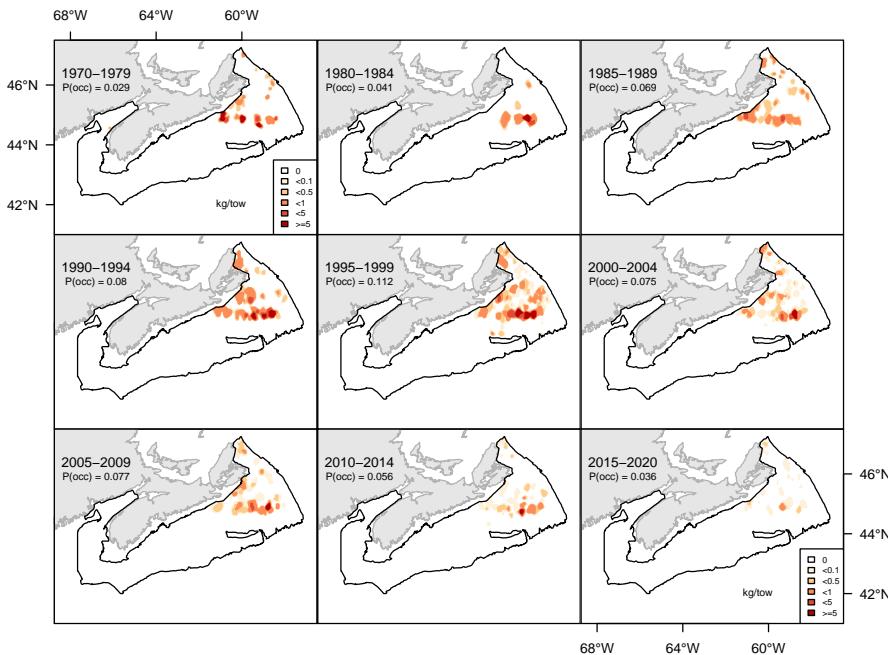

Figure 7.46A. Inverse distance weighted distribution of catch biomass (kg/tow) for Vahl's eelpout.

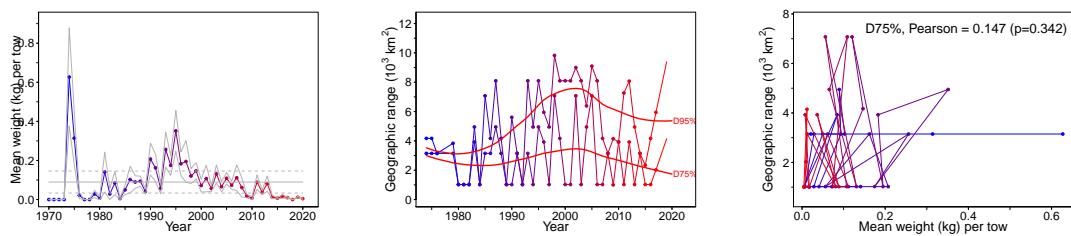

Figure 7.46B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Vahl's eelpout.

7.47 Atlantic butterfish (Stromaté fossette) - species code 701 (category LI)

Scientific name: [Peprilus triacanthus](#)

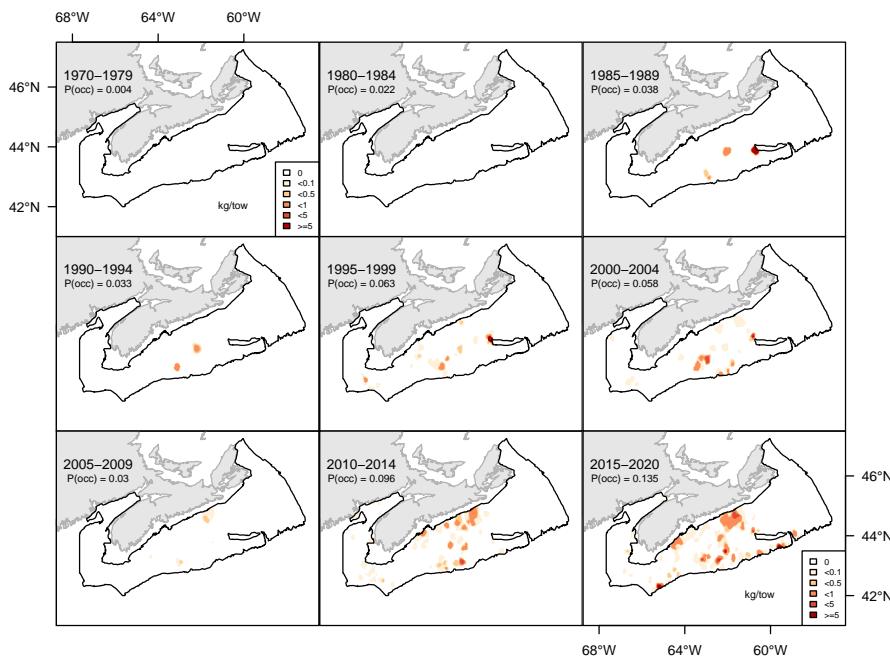

Figure 7.47A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic butterfish.

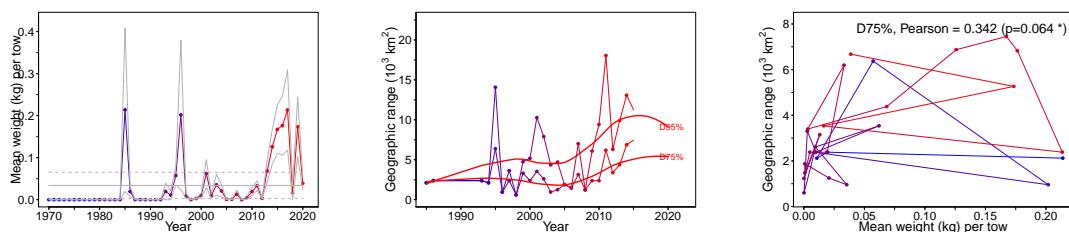

Figure 7.47B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic butterfish.

7.48 Atlantic hookear sculpin (Hameçon atlantique) - species code 880 (category LI)

Scientific name: [Artediellus atlanticus](#)

Figure 7.48A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic hookear sculpin.

Figure 7.48B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic hookear sculpin.

7.49 Barndoor skate (Grande raie) - species code 200 (category LI)

Scientific name: [Dipturus laevis](#)

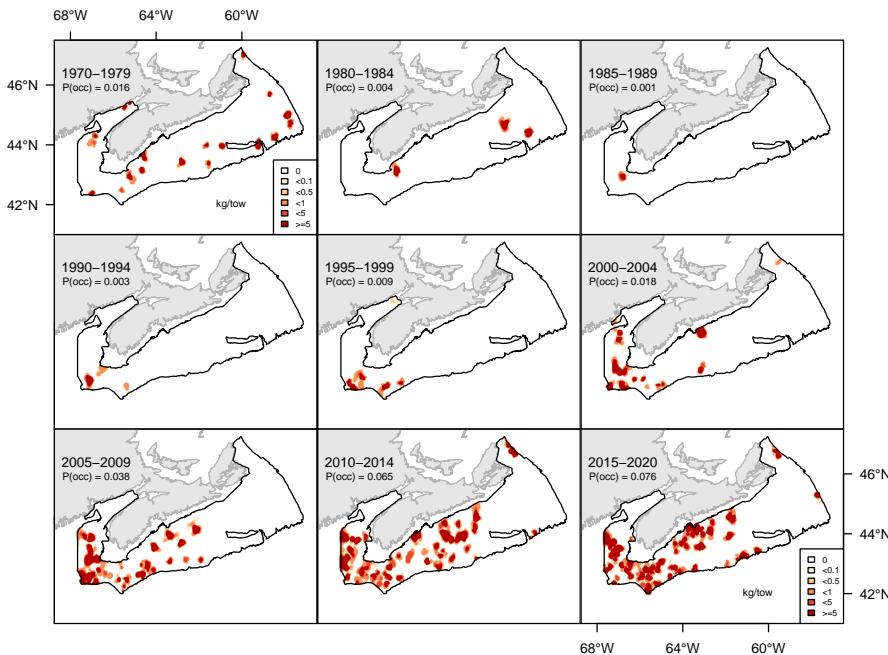

Figure 7.49A. Inverse distance weighted distribution of catch biomass (kg/tow) for Barndoor skate.

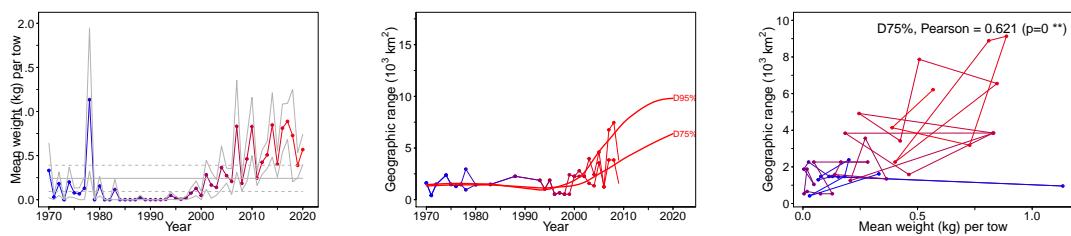

Figure 7.49B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Barndoor skate.

7.50 Little skate (Raie hérisson) - species code 203 (category LI)

Scientific name: [Leucoraja erinacea](#)

Figure 7.50A. Inverse distance weighted distribution of catch biomass (kg/tow) for Little skate.

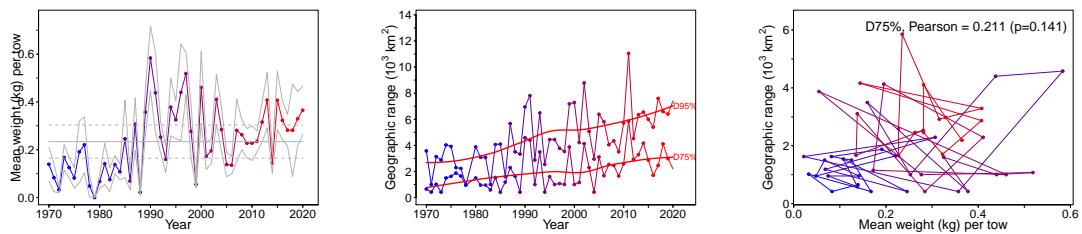

Figure 7.50B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Little skate.

7.51 Northern prawn (Crevette nordique) - species code 2211 (category SF)

Scientific name: [Pandalus borealis](#)

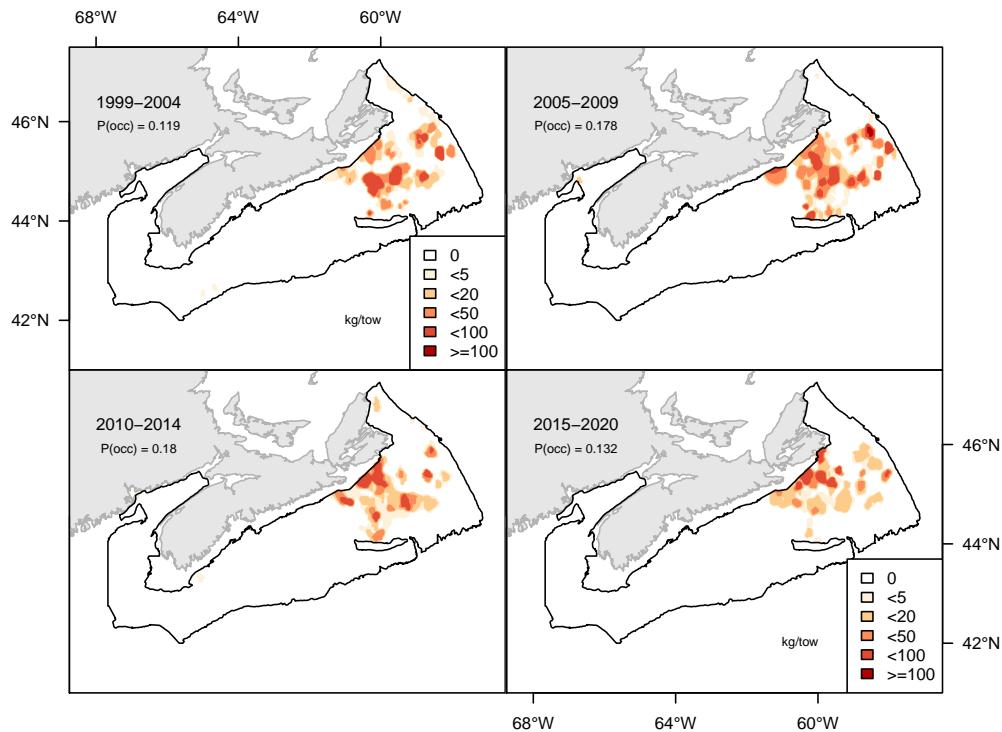

Figure 7.51A. Inverse distance weighted distribution of catch biomass (kg/tow) for Northern prawn.

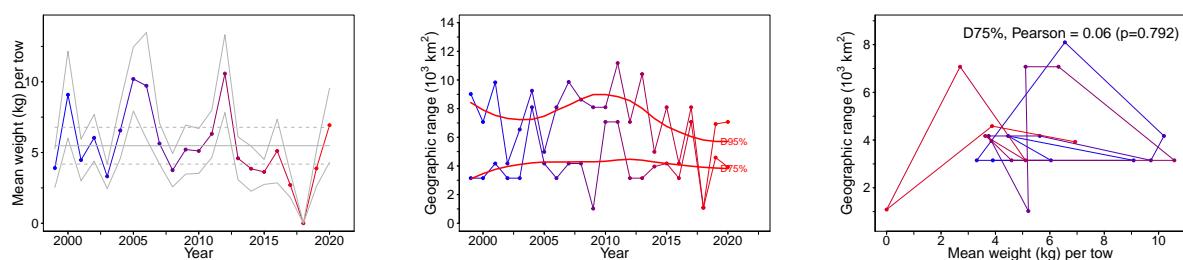

Figure 7.51B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Northern prawn.

7.52 Jonah crab (Tourteau jona) - species code 2511 (category SF)

Scientific name: [Cancer borealis](#)

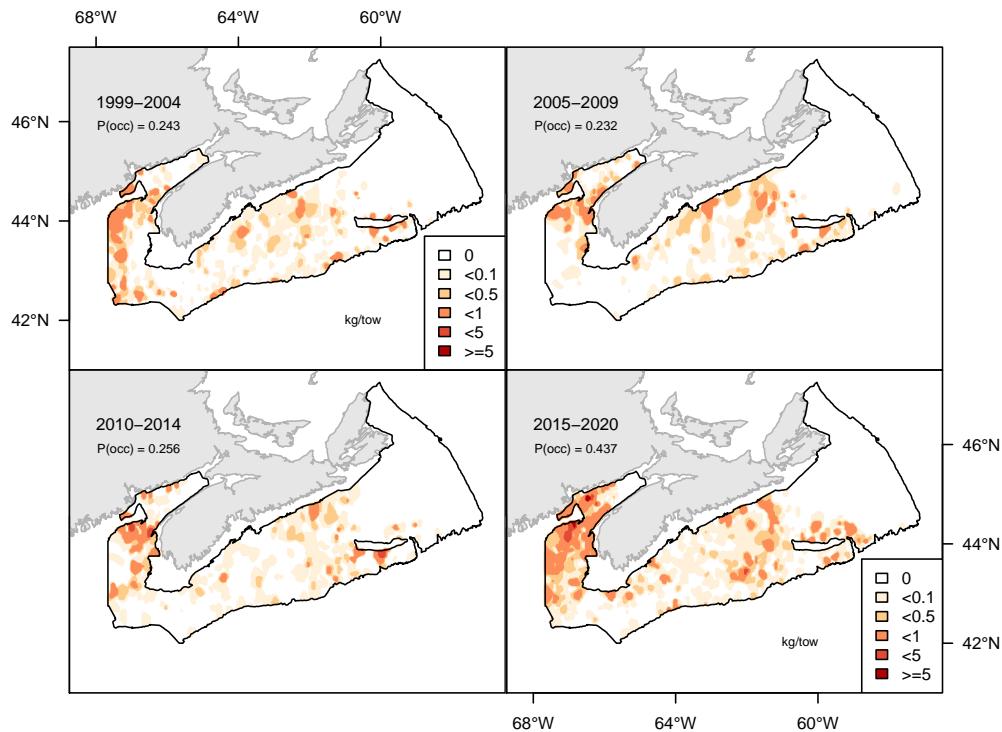

Figure 7.52A. Inverse distance weighted distribution of catch biomass (kg/tow) for Jonah crab.

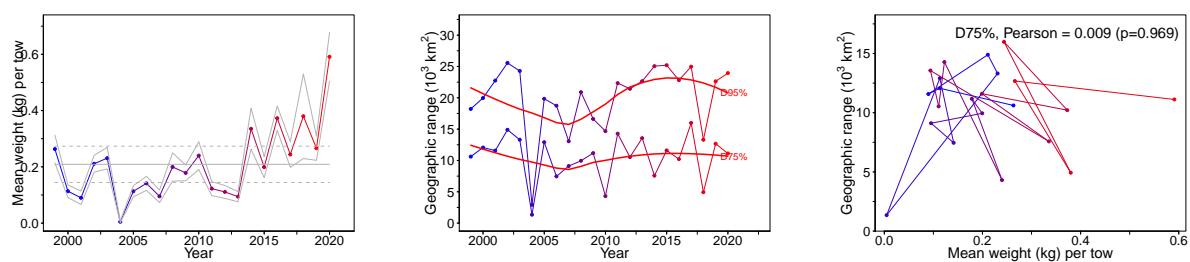

Figure 7.52B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Jonah crab.

7.53 Atlantic rock crab (Tourteau poïnclos) - species code 2513 (category SF)

Scientific name: [Cancer irroratus](#)

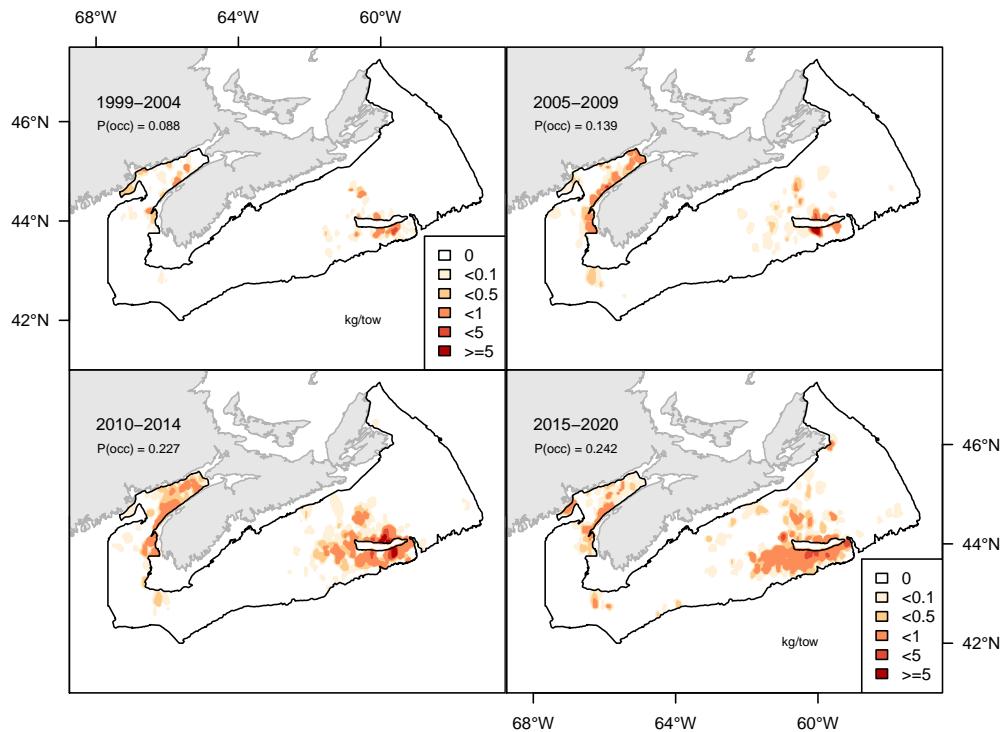

Figure 7.53A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic rock crab.

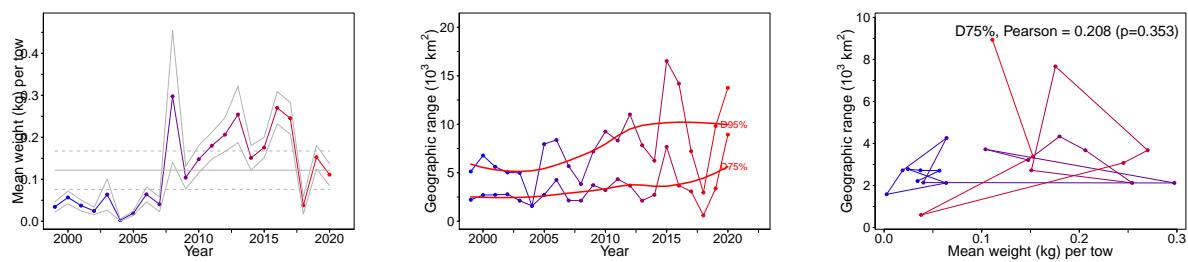

Figure 7.53B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic rock crab.

7.54 Arctic lyre crab (*Crabe Hyas coarctatus*) - species code 2521 (category SF)

Scientific name: [Hyas coarctatus](#)

Figure 7.54A. Inverse distance weighted distribution of catch biomass (kg/tow) for Arctic lyre crab.

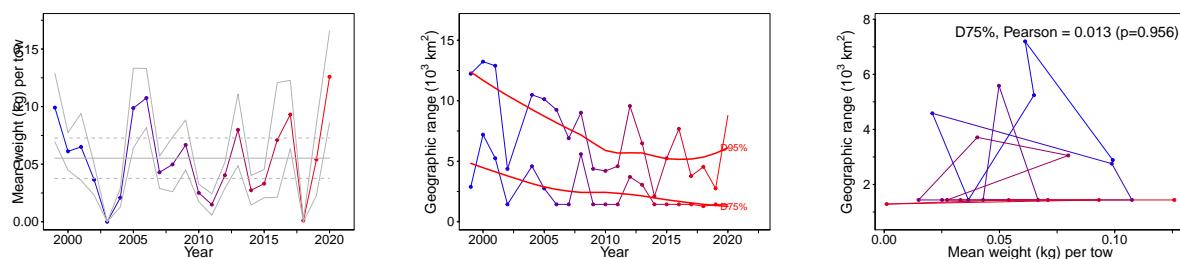

Figure 7.54B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Arctic lyre crab.

7.55 Atlantic king crab (Crabe épineux du nord) - species code 2523 (category SF)

Scientific name: [Lithodes maja](#)

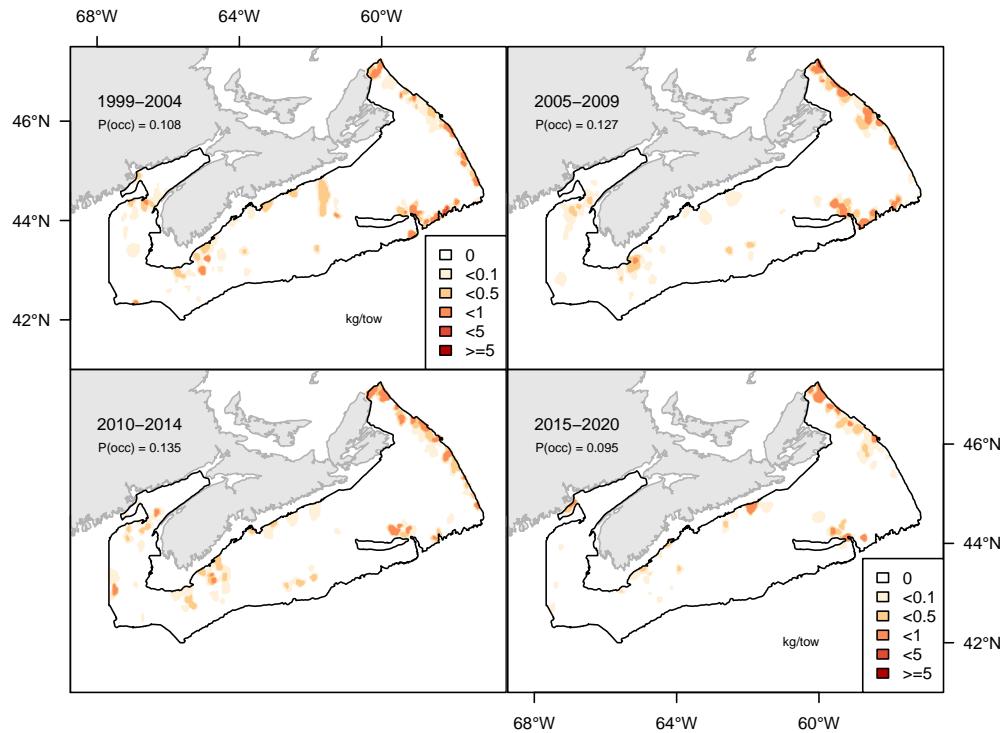

Figure 7.55A. Inverse distance weighted distribution of catch biomass (kg/tow) for Atlantic king crab.

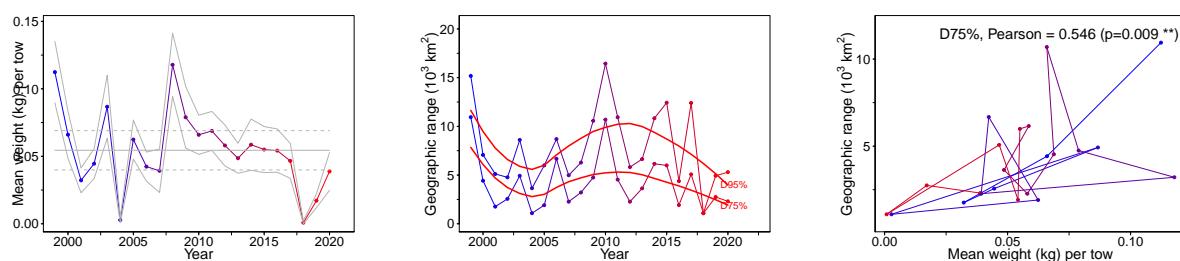

Figure 7.55B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Atlantic king crab.

7.56 Queen crab (Crabe des neiges) - species code 2526 (category SF)

Scientific name: [Chionoecetes opilio](#)

Figure 7.56A. Inverse distance weighted distribution of catch biomass (kg/tow) for Queen crab.

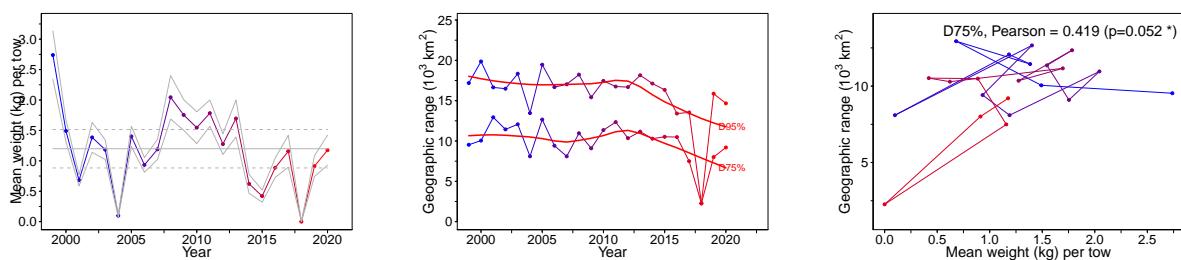

Figure 7.56B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Queen crab.

7.57 Great spider crab (Crabe lyre araignée) - species code 2527 (category SF)

Scientific name: [Hyas araneus](#)

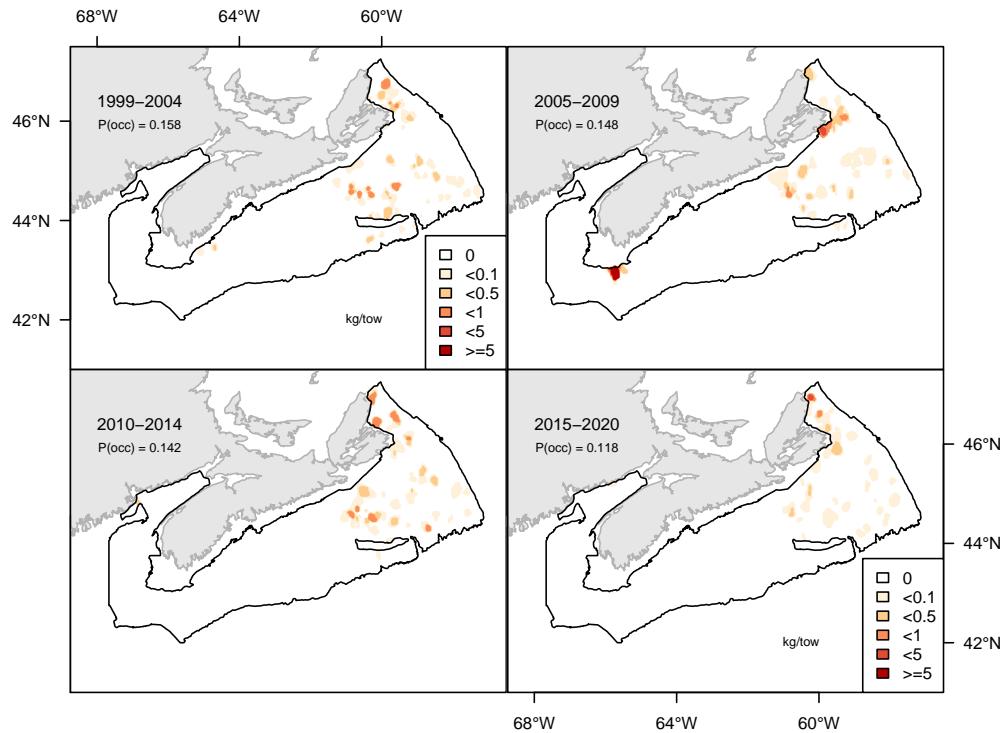

Figure 7.57A. Inverse distance weighted distribution of catch biomass (kg/tow) for Great spider crab.

Figure 7.57B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of Great spider crab.

7.58 American lobster (Homard américain) - species code 2550 (category SF)

Scientific name: [Homarus americanus](#)

Figure 7.58A. Inverse distance weighted distribution of catch biomass (kg/tow) for American lobster.

Figure 7.58B. Stratified random estimates of biomass (kg/tow), D75 and D95 and the correlation between D75 and biomass of American lobster.

7.59 Sea lamprey (*Lamproie marine*) - species code 240 (category LR)

Scientific name: [Petromyzon marinus](#)

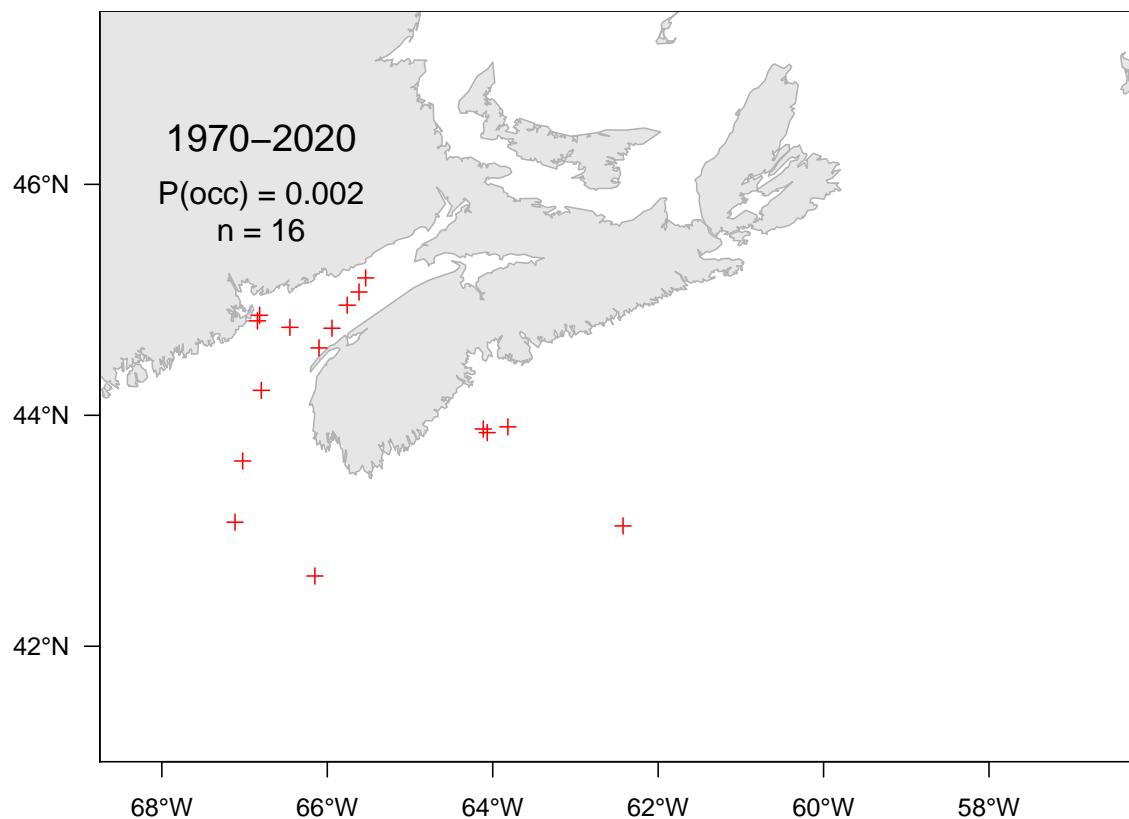

Figure 7.59A. Catch distribution for Sea lamprey.

7.60 Atlantic tomcod (*Poulamon atlantique*) - species code 17 (category LR)

Scientific name: [Micogadus tomcod](#)

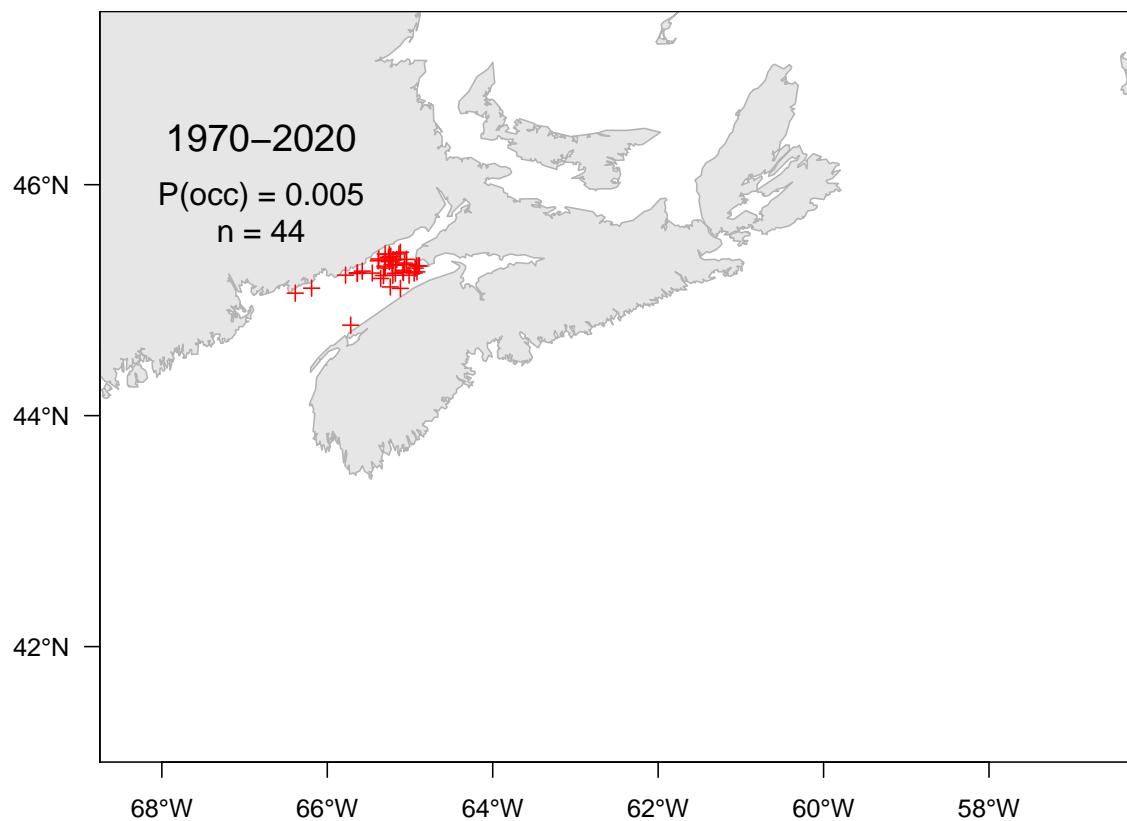

Figure 7.60A. Catch distribution for Atlantic tomcod.

7.61 Offshore silver hake (Merlu argenté du large) - species code 19 (category LR)

Scientific name: [Merluccius albidus](#)

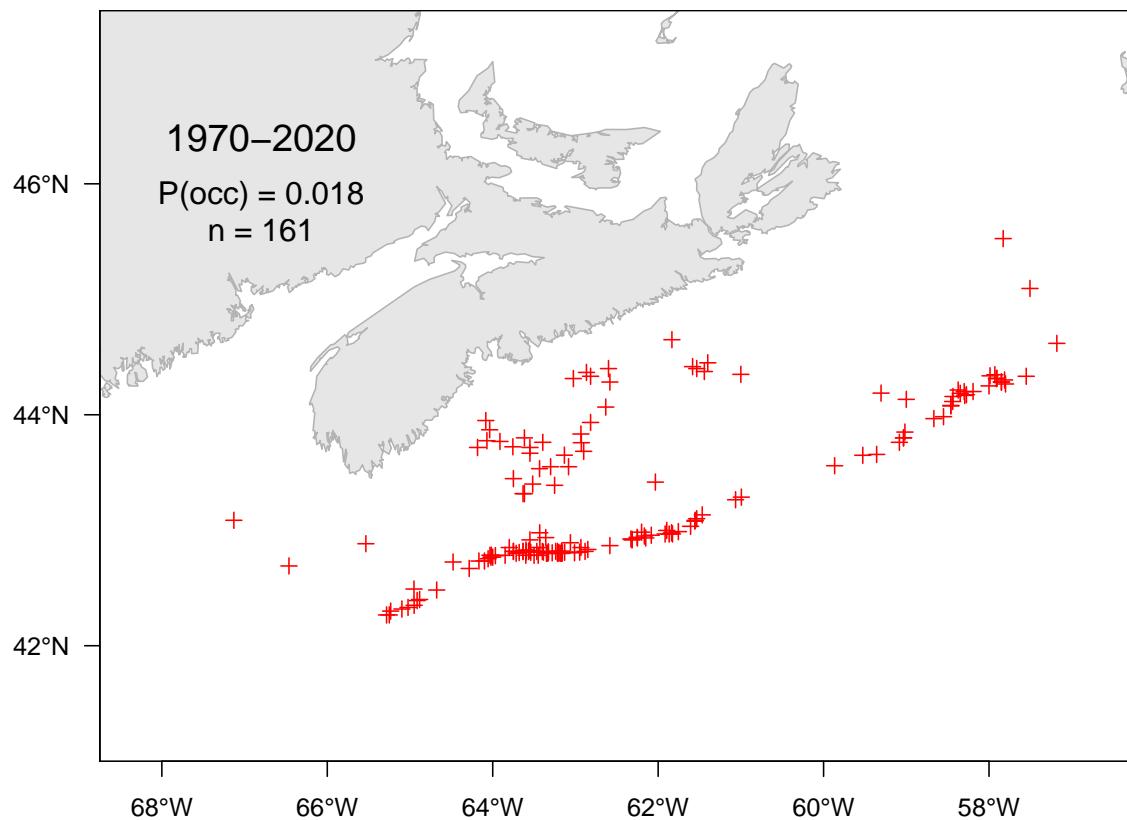

Figure 7.61A. Catch distribution for Offshore silver hake.

7.62 Spotted wolffish (Loup tacheté) - species code 51 (category LR)

Scientific name: [Anarhichas minor](#)

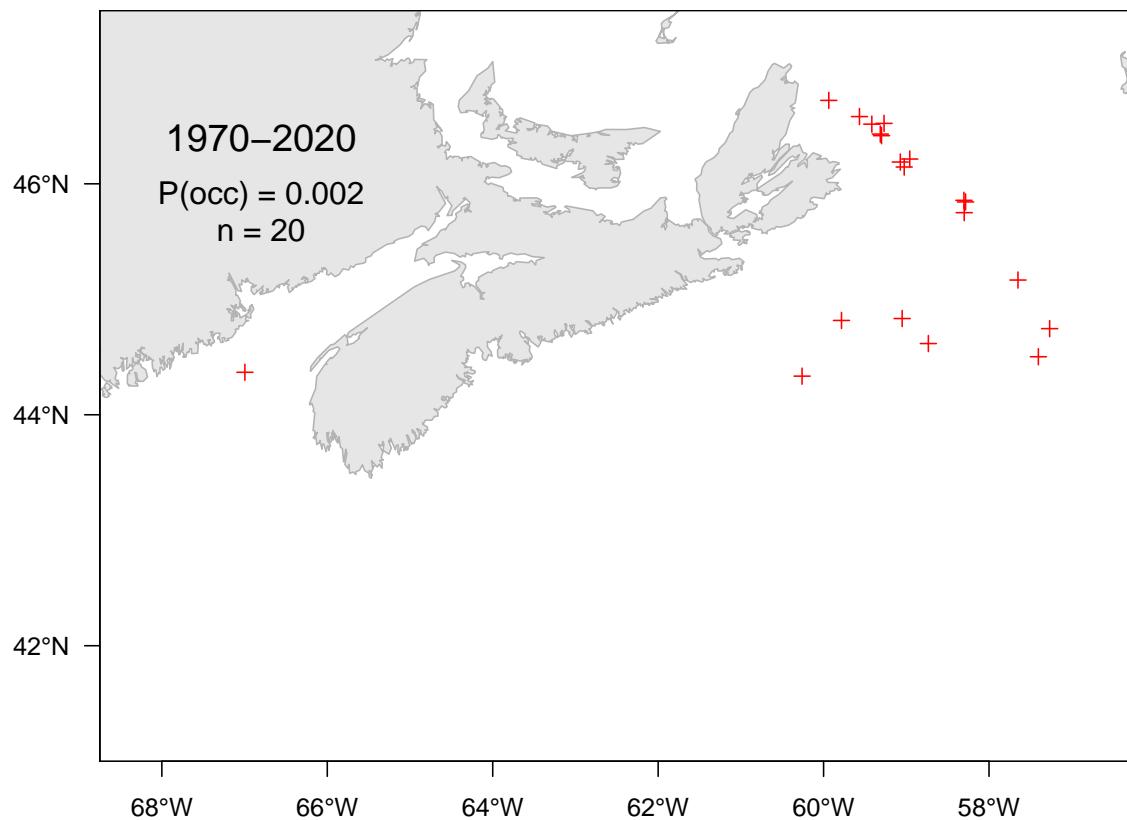

Figure 7.62A. Catch distribution for Spotted wolffish.

7.63 Northern wolffish (Loup à tête large) - species code 52 (category LR)

Scientific name: [Anarhichas denticulatus](#)

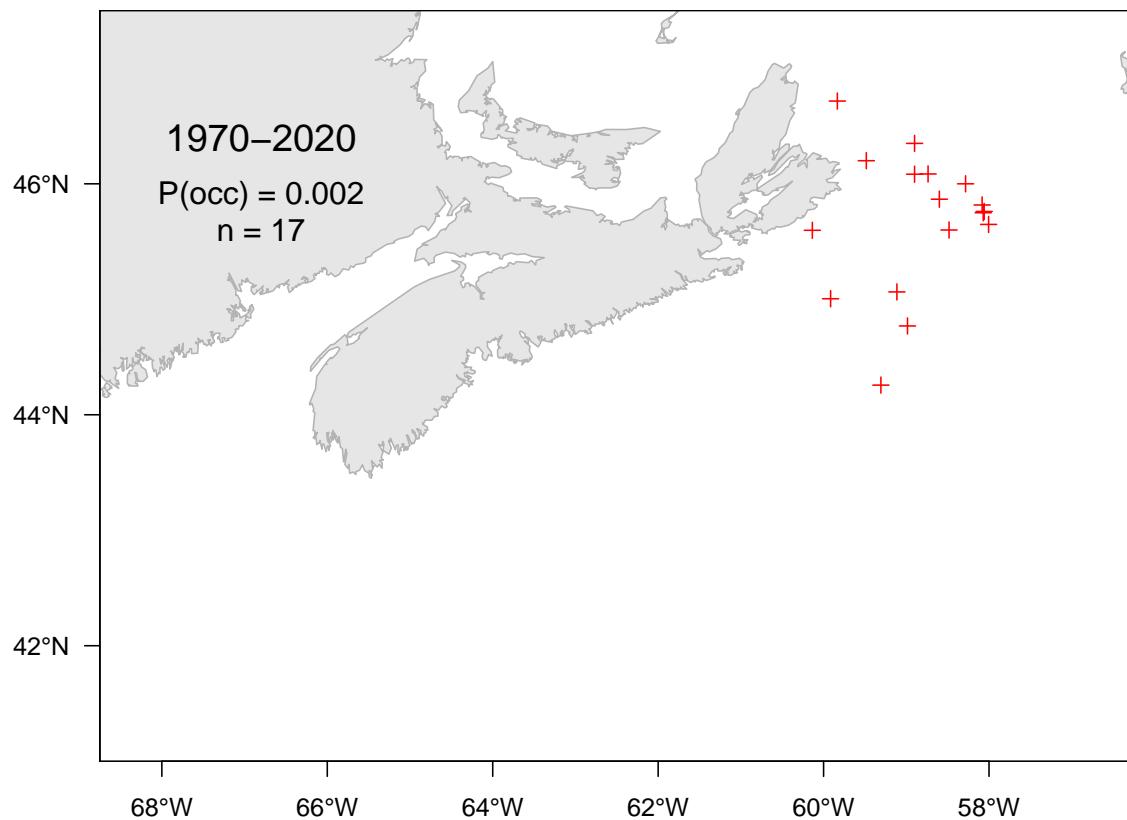

Figure 7.63A. Catch distribution for Northern wolffish.

7.64 Rainbow smelt (Éperlan arc-en-ciel) - species code 63 (category LR)

Scientific name: [Osmerus mordax](#)

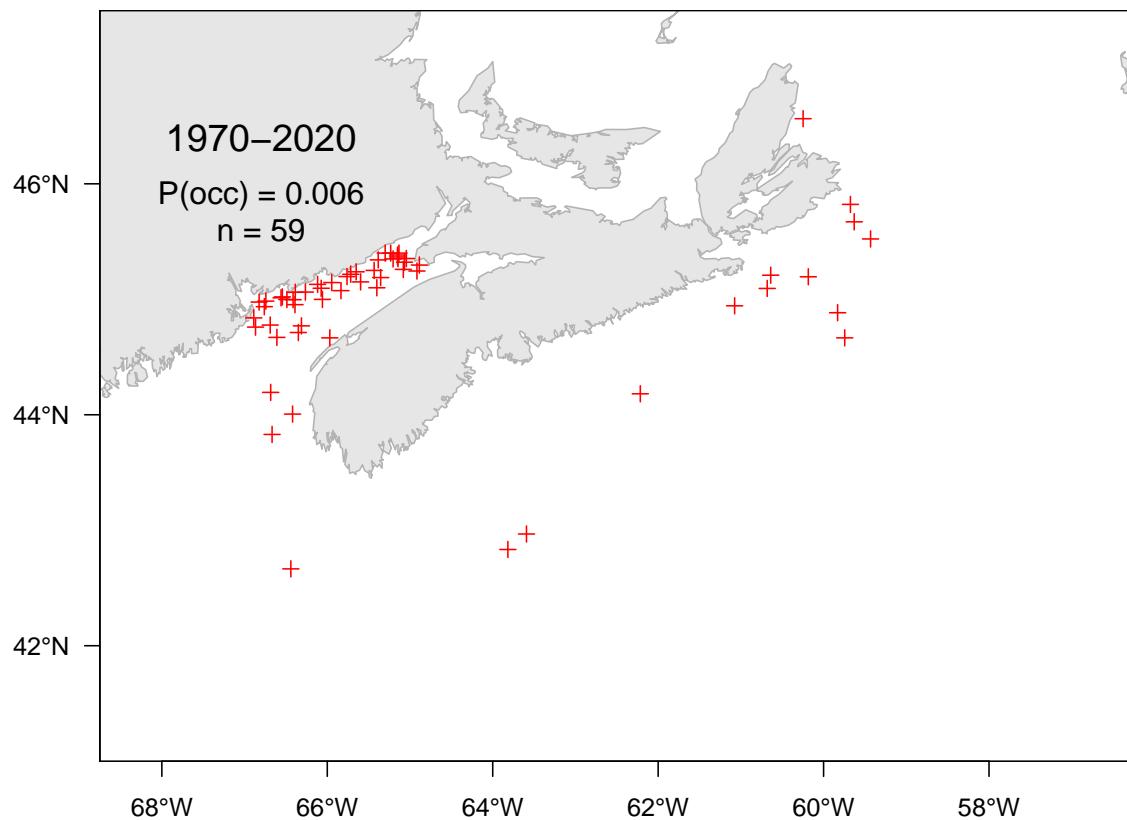

Figure 7.64A. Catch distribution for Rainbow smelt.

7.65 Cunner (Tanche-tautogue) - species code 122 (category LR)

Scientific name: [Tautogolabrus adspersus](#)

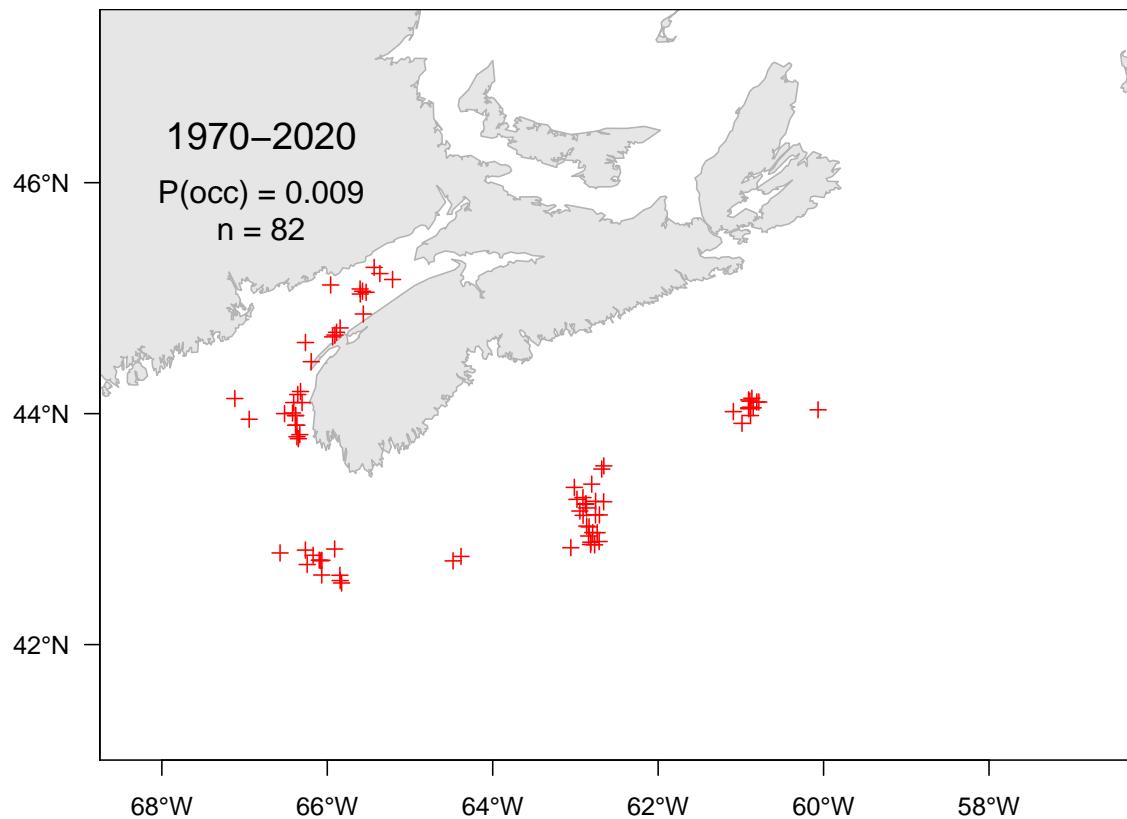

Figure 7.65A. Catch distribution for Cunner.

7.66 Fourspot flounder (Cardeau à quatre ocelles) - species code 142 (category LR)

Scientific name: [Hippoglossina oblonga](#)

7.67 Windowpane flounder (Turbot de sable) - species code 143 (category LR)

Scientific name: [Scophthalmus aquosus](#)

Figure 7.67A. Catch distribution for Windowpane flounder.

7.68 Longnose greeneye (Oeil-vert à long nez) - species code 149 (category LR)

Scientific name: [Parasudis triculenta](#)

Figure 7.68A. Catch distribution for Longnose greeneye.

7.69 Lanternfishes (Poissons-lanternes) - species code 150 (category LR)

Scientific name: [Myctophidae](#)

Figure 7.69A. Catch distribution for Lanternfishes.

7.70 Shortnose greeneye (Éperlan du large) - species code 156 (category LR)

Scientific name: [Chlorophthalmus agassizi](#)

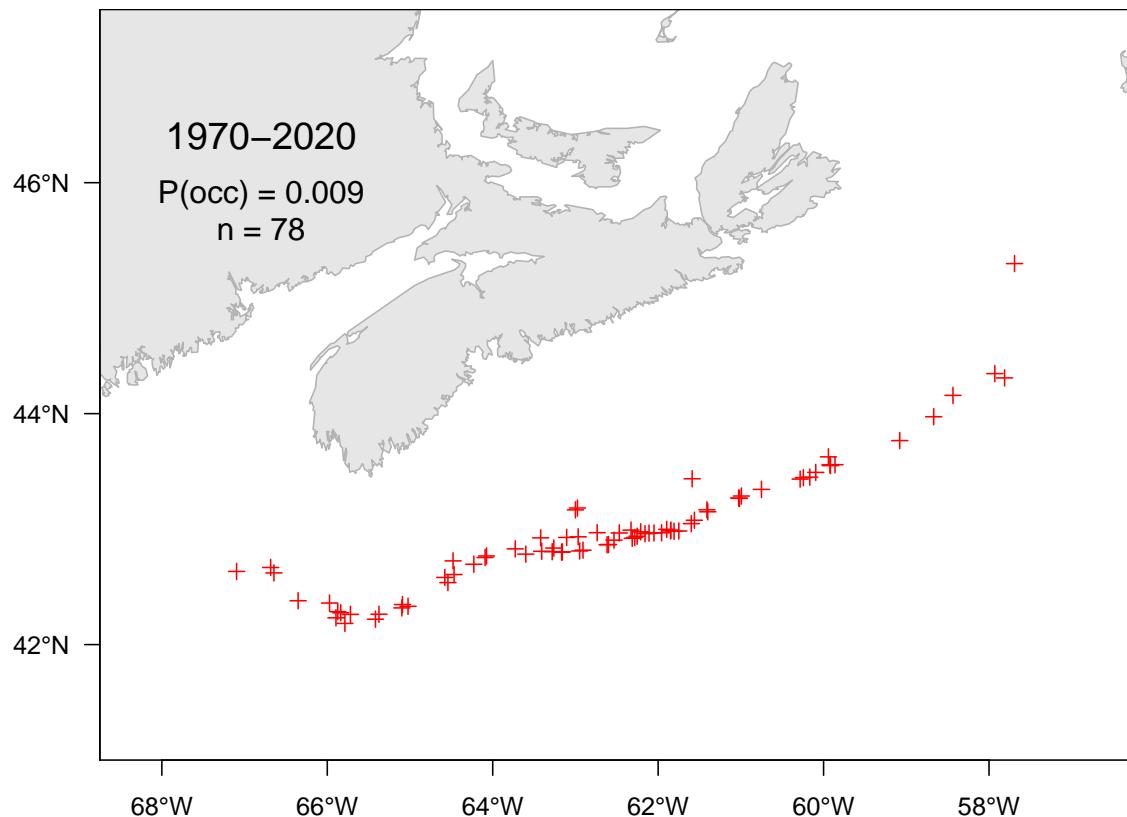

Figure 7.70A. Catch distribution for Shortnose greeneye.

7.71 Silvery lightfish (Brossé améthyste) - species code 158 (category LR)

Scientific name: [Maurolicus muelleri](#)

Figure 7.71A. Catch distribution for Silvery lightfish.

7.72 Boa dragonfish (Dragon-boa) - species code 159 (category LR)

Scientific name: [Stomias boa](#)

Figure 7.72A. Catch distribution for Boa dragonfish.

7.73 Shorthorn sculpin (Chabosseau à épines courtes) - species code 301 (category LR)

Scientific name: [Myoxocephalus scorpius](#)

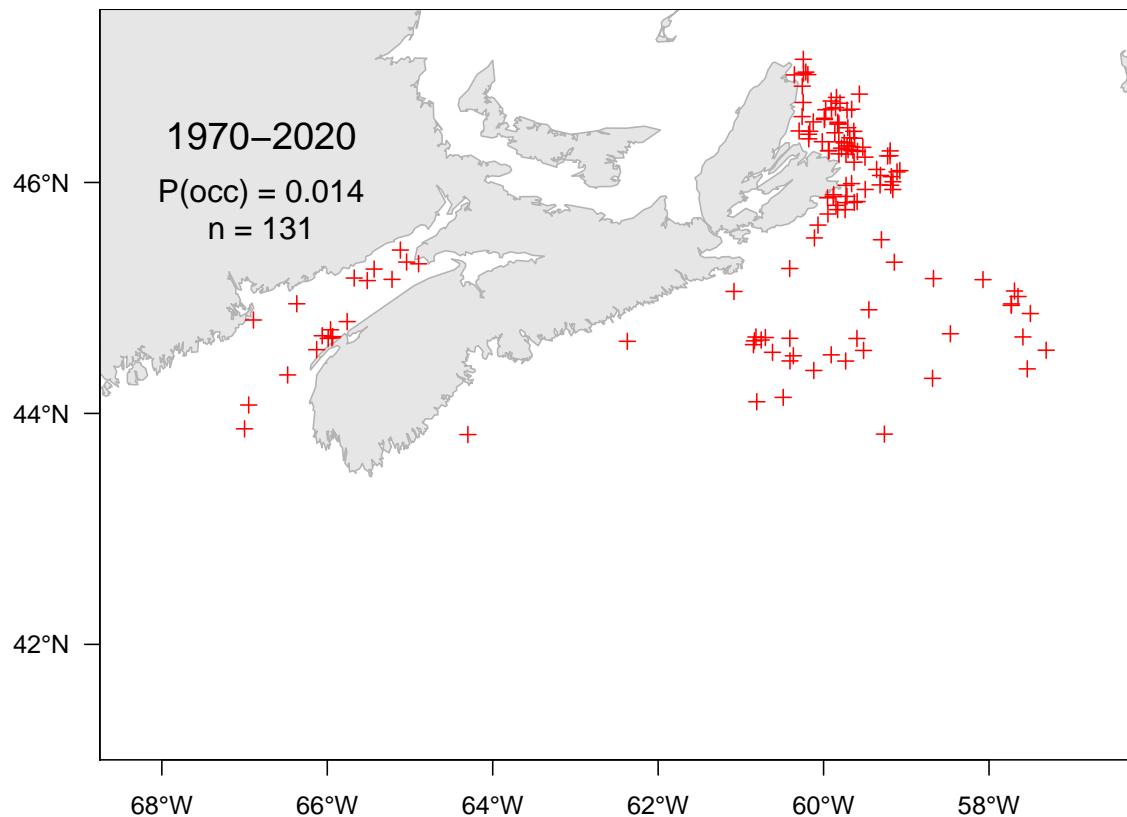

Figure 7.73A. Catch distribution for Shorthorn sculpin.

7.74 Grubby (Chabosseau bronzé) - species code 303 (category LR)

Scientific name: [Myoxocephalus aenaeus](#)

Figure 7.74A. Catch distribution for Grubby.

7.75 Polar sculpin (Cotte polaire) - species code 307 (category LR)

Scientific name: [Cottunculus microps](#)

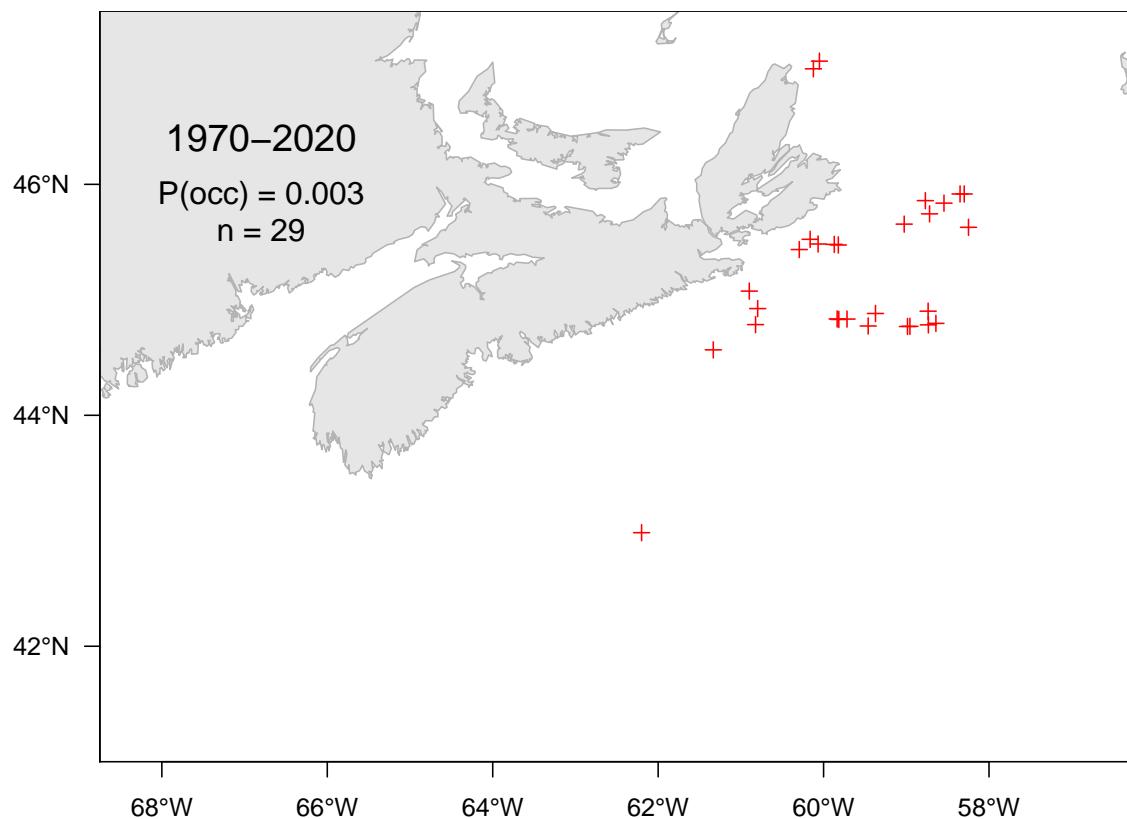

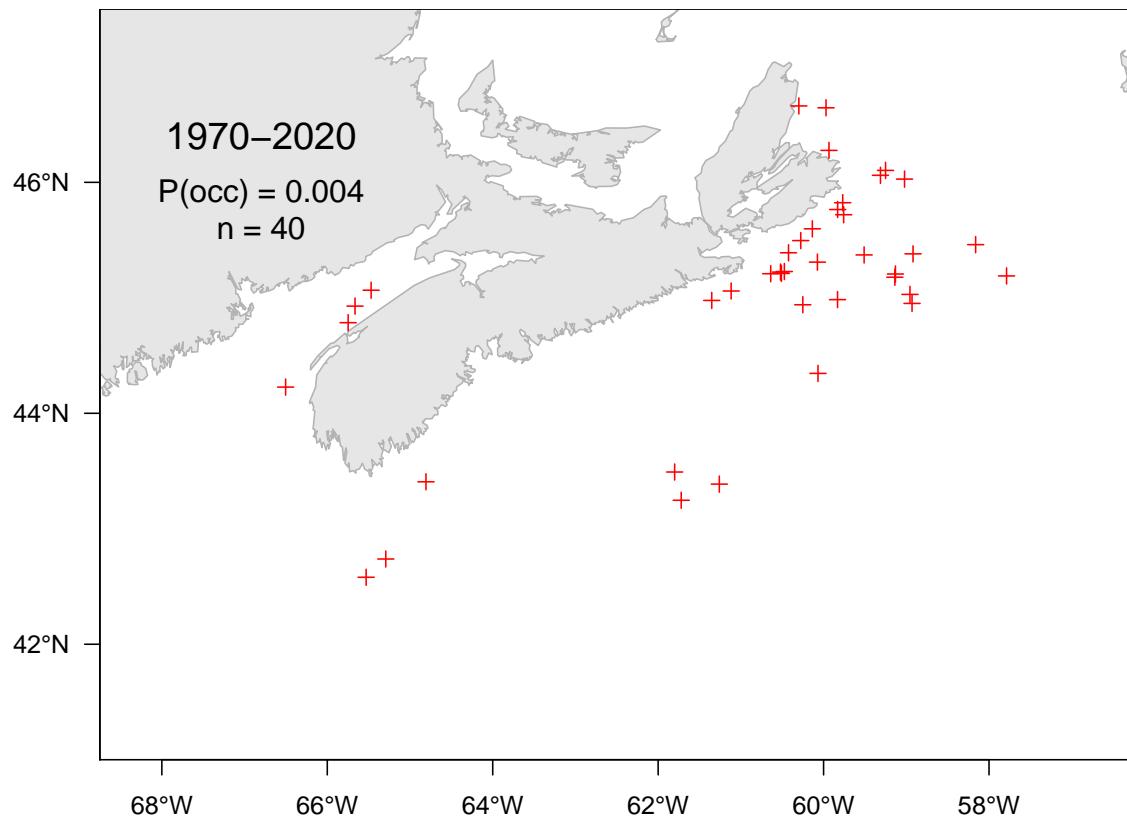

Figure 7.75A. Catch distribution for Polar sculpin.

7.76 Spatulate sculpin (Icèle spatulée) - species code 314 (category LR)

Scientific name: [Icelus spatula](#)

7.77 Arctic alligatorfish (Poisson-alligator arctique) - species code 341 (category LR)

Scientific name: [Ulcina olrikii](#)

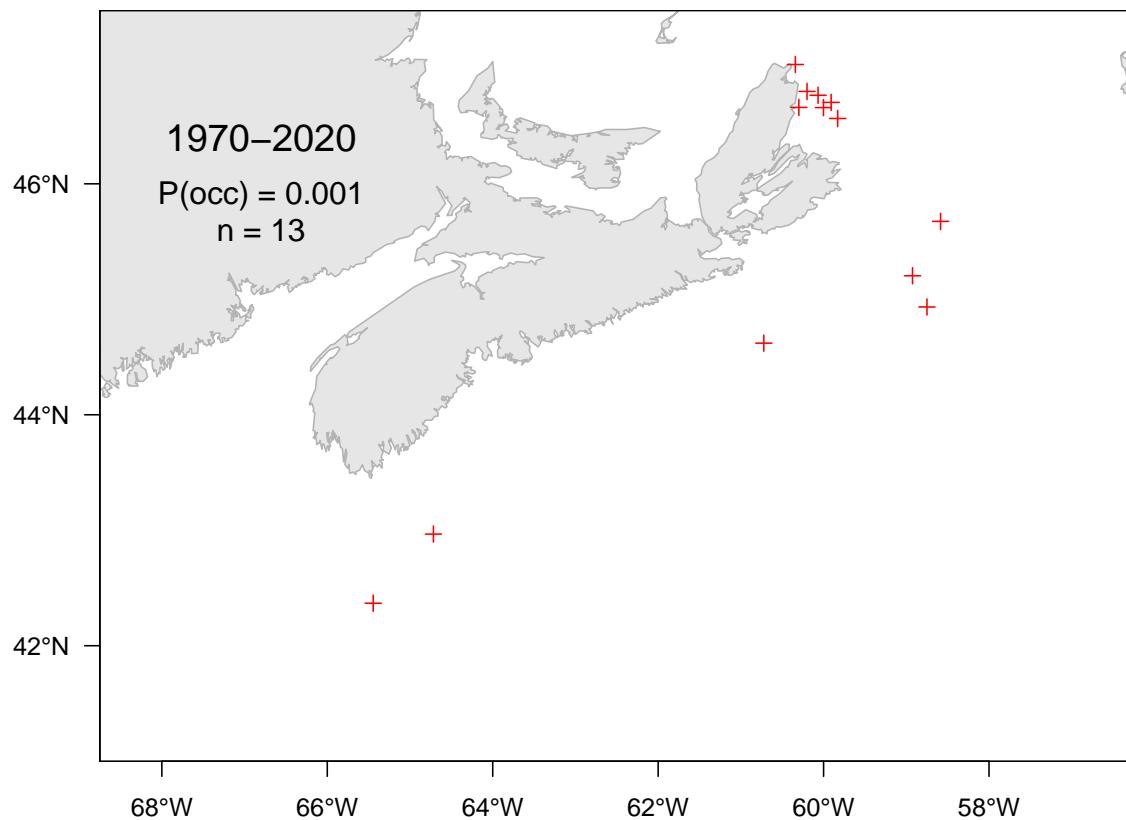

Figure 7.77A. Catch distribution for Arctic alligatorfish.

7.78 Alligatorfishes (Poissons-alligator) - species code 351 (category LR)

Scientific name: [Agonidae](#)

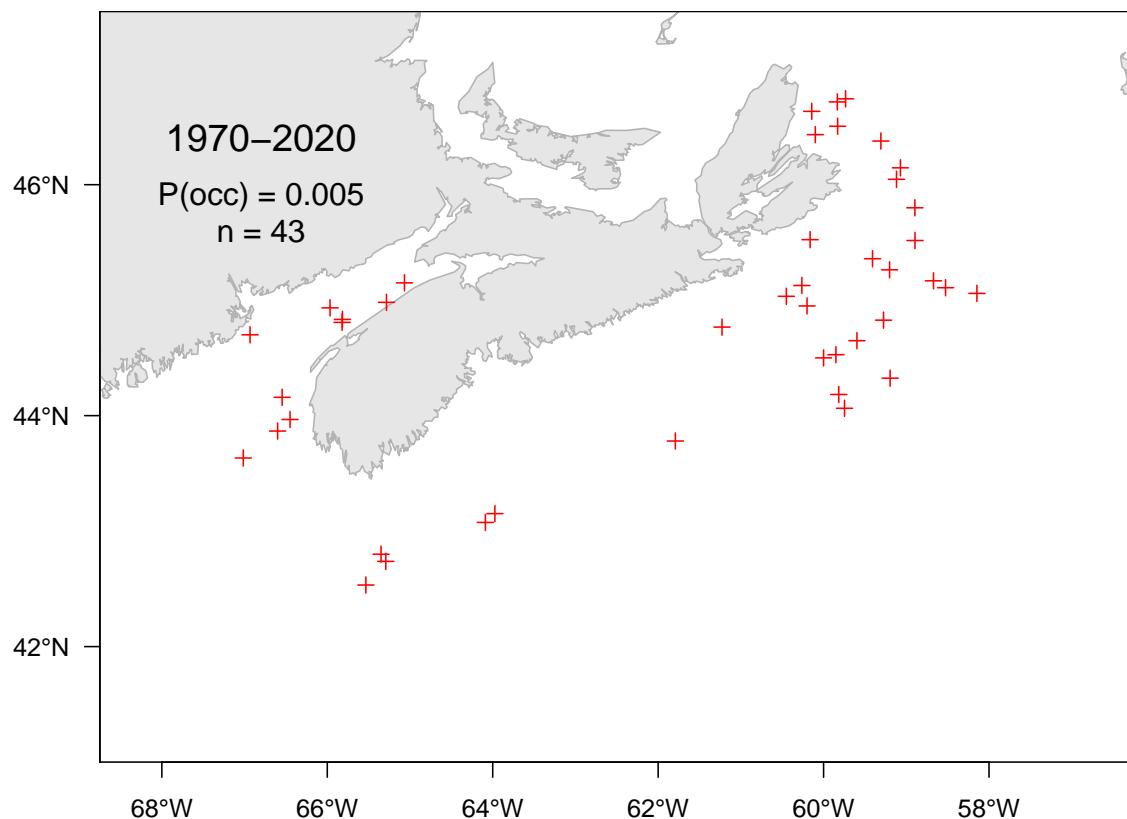

Figure 7.78A. Catch distribution for Alligatorfishes.

7.79 Roughnose grenadier (Grenadier-scie) - species code 412 (category LR)

Scientific name: [Trachyrincus murrayi](#)

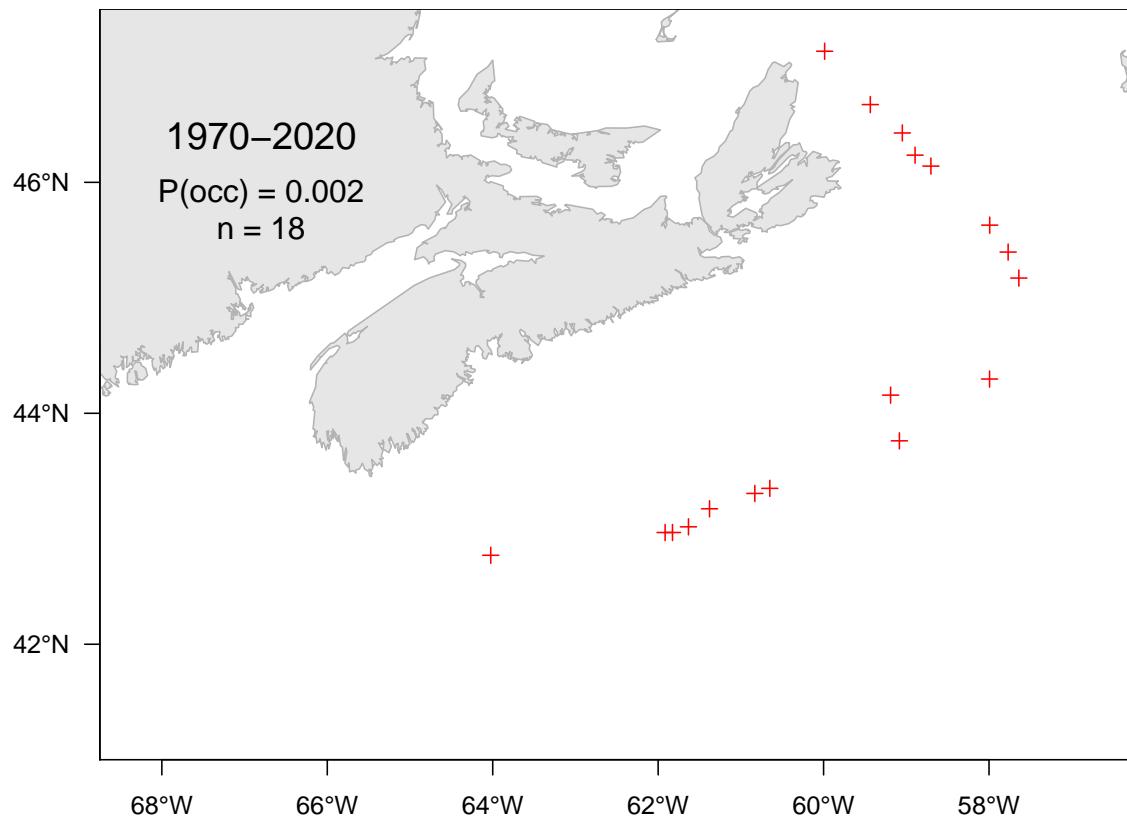

Figure 7.79A. Catch distribution for Roughnose grenadier.

7.80 Roundnose grenadier (Grenadier de roche) - species code 414 (category LR)

Scientific name: [Coryphaenoides rupestris](#)

Figure 7.80A. Catch distribution for Roundnose grenadier.

7.81 Atlantic seasnail (*Limace atlantique*) - species code 503 (category LR)

Scientific name: [Liparis atlanticus](#)

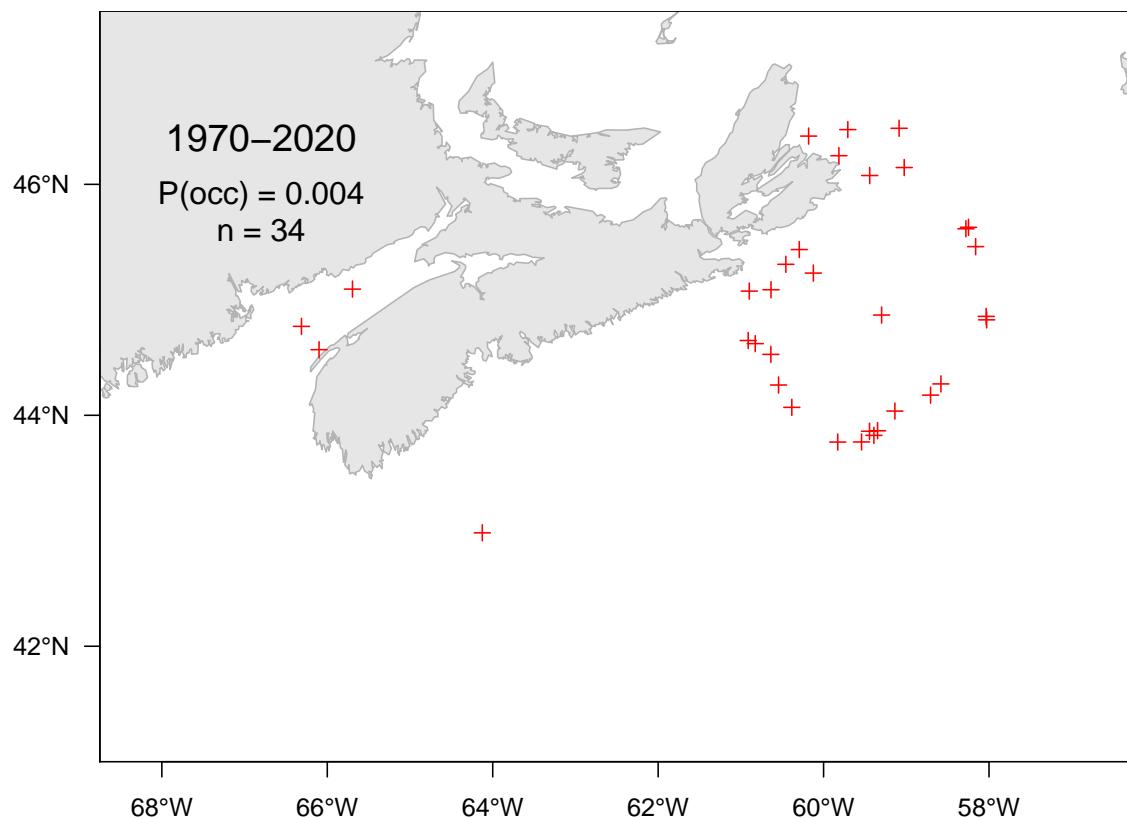

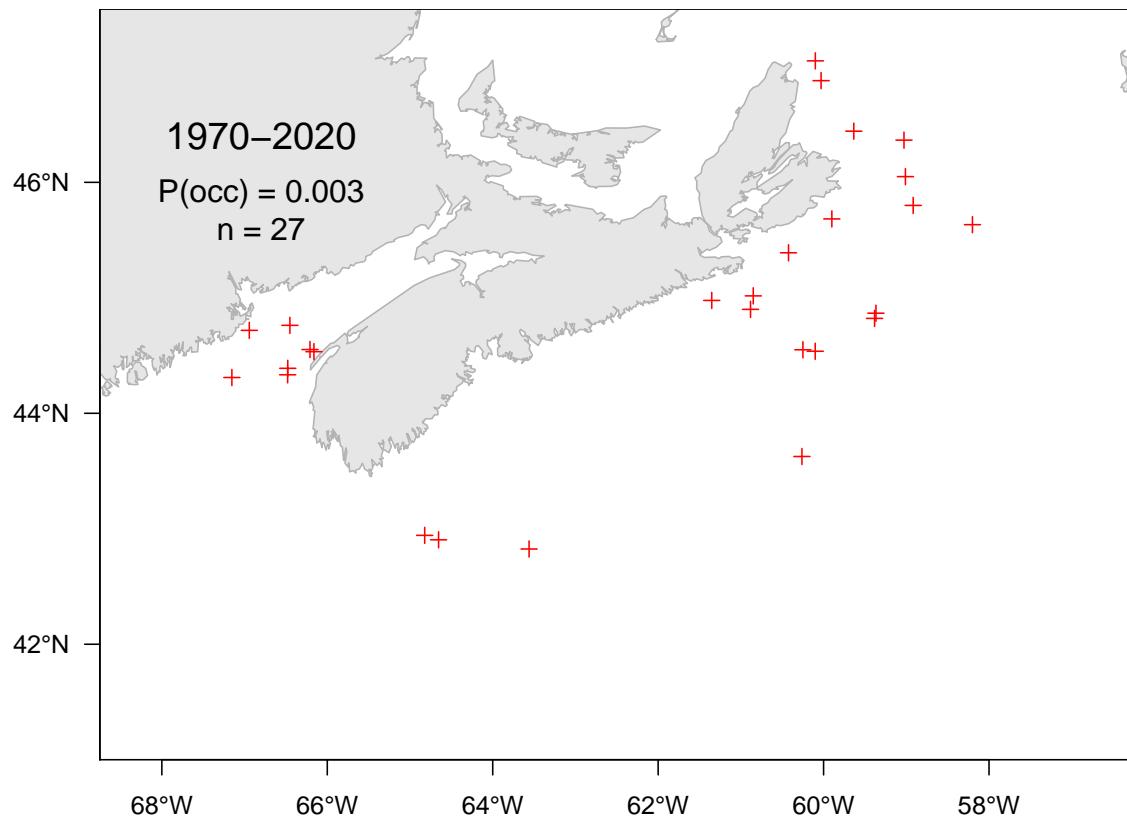

Figure 7.81A. Catch distribution for Atlantic seasnail.

7.82 Gelatinous snailfish (Limace gélatineuse) - species code 505 (category LR)

Scientific name: [Liparis fabricii](#)

7.83 Variegated snailfish (*Limace marbée*) - species code 512 (category LR)

Scientific name: [Liparis gibbus](#)

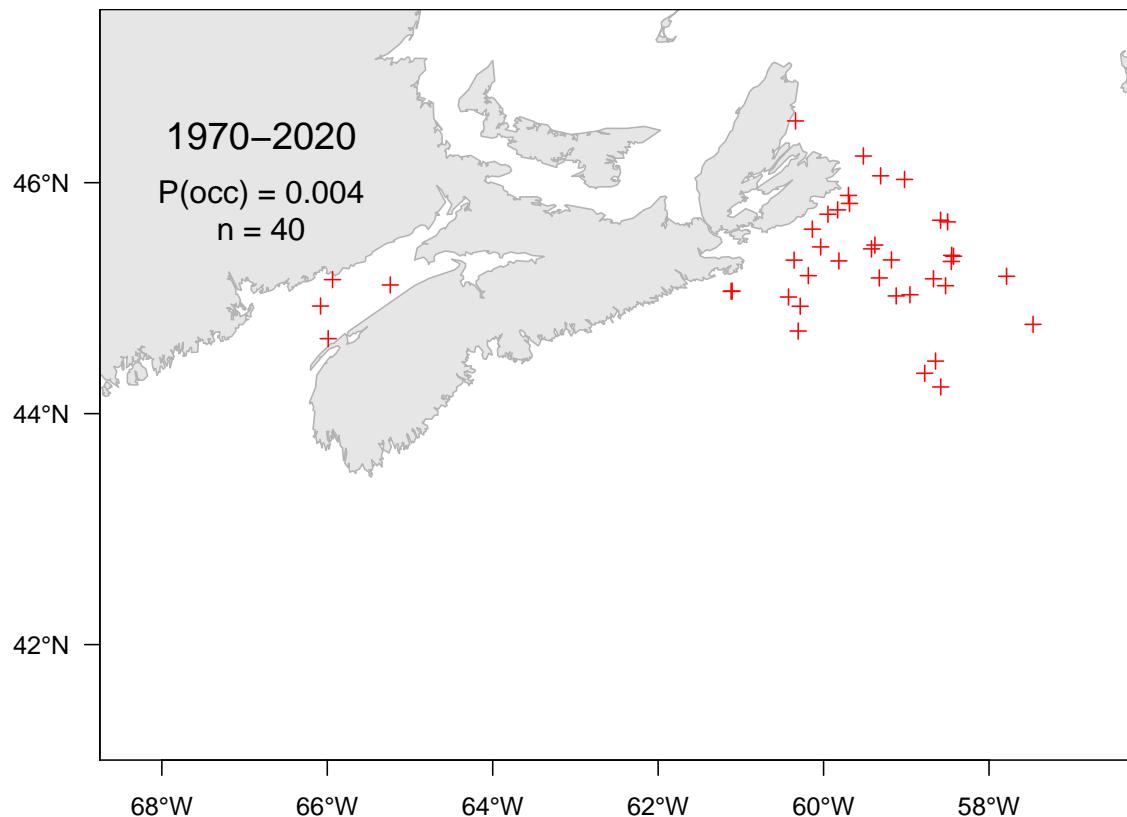

Figure 7.83A. Catch distribution for Variegated snailfish.

7.84 Sea tadpole (Petite limace de mer) - species code 520 (category LR)

Scientific name: [Careproctus reinhardtii](#)

Figure 7.84A. Catch distribution for Sea tadpole.

7.85 Wolf eelpout (*Lycodes à tête longue*) - species code 603 (category LR)

Scientific name: [Lycenchelys verrillii](#)

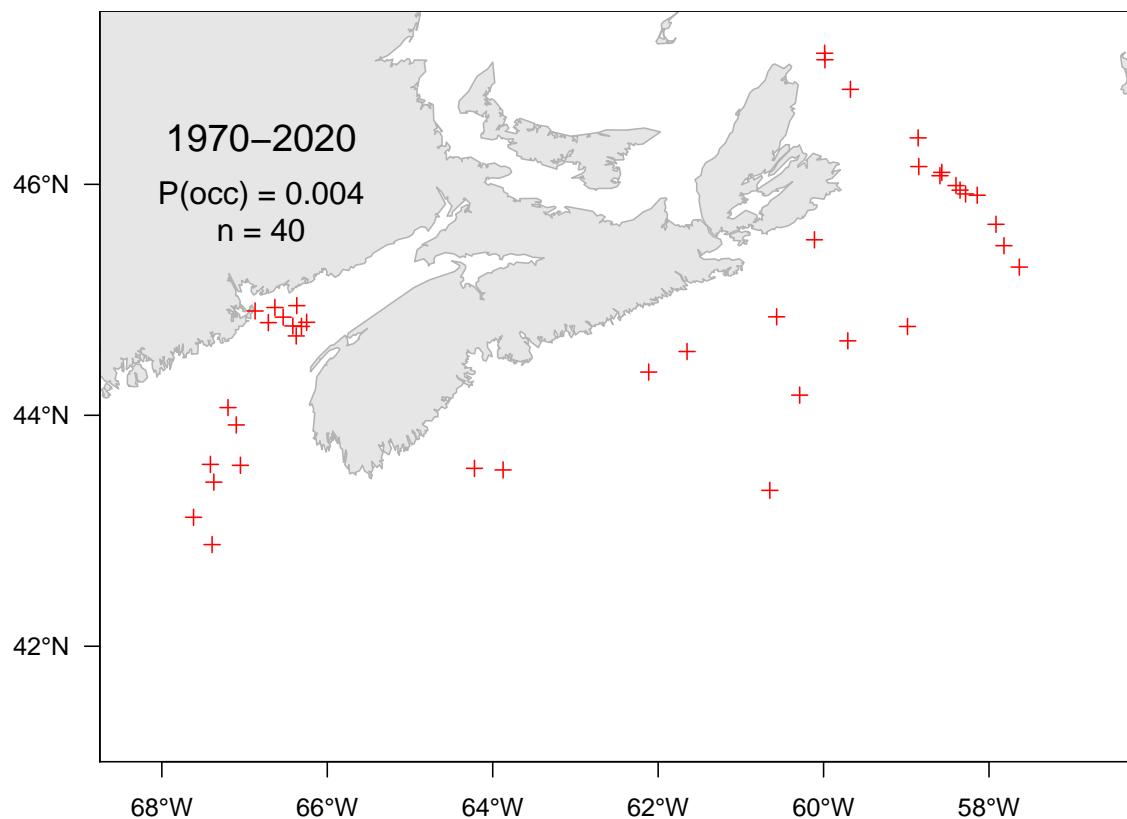

Figure 7.85A. Catch distribution for Wolf eelpout.

7.86 Slender snipe eel (Avocette ruban) - species code 604 (category LR)

Scientific name: [Nemichthys scolopaceus](#)

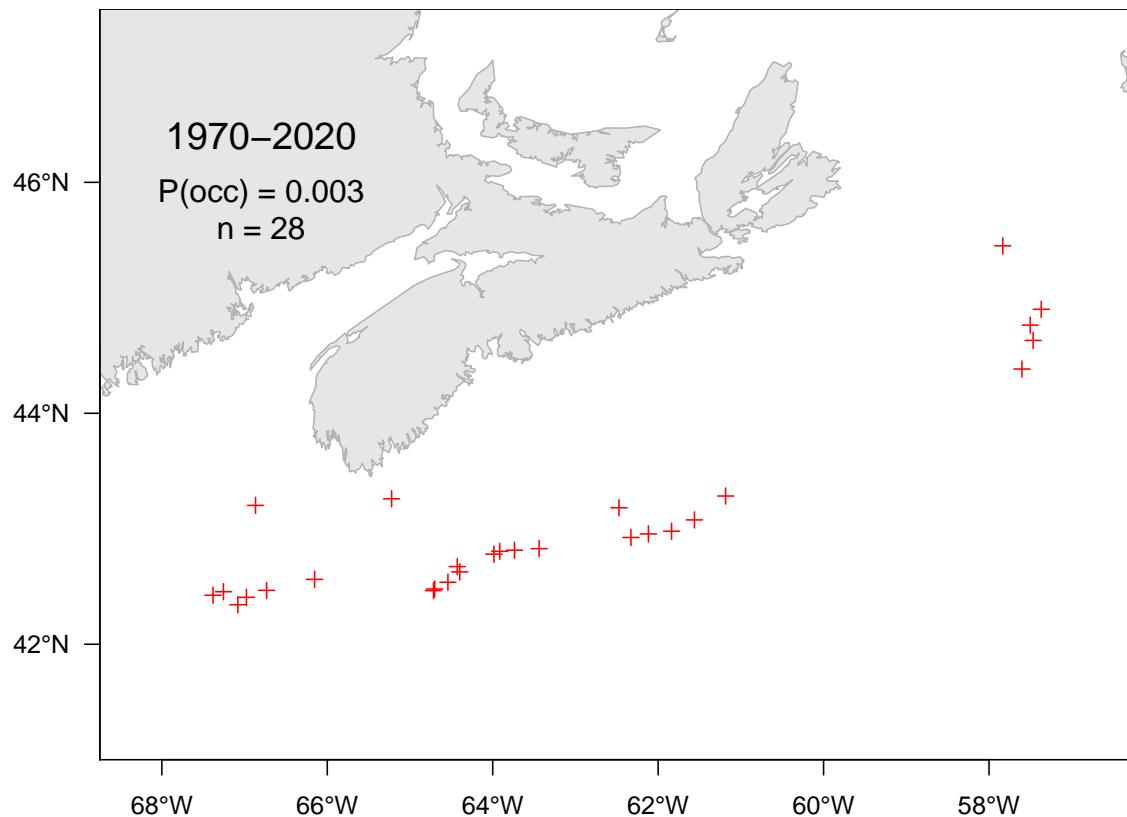

Figure 7.86A. Catch distribution for Slender snipe eel.

7.87 Newfoundland eelpout (Lycodes du Labrador) - species code 619 (category LR)

Scientific name: [Lycodes terraenovae](#)

Figure 7.87A. Catch distribution for Newfoundland eelpout.

7.88 Newfoundland eelpout (Lycodes du Labrador) - species code 620 (category LR)

Scientific name: [Lycodes lavalaei](#)

Figure 7.88A. Catch distribution for Newfoundland eelpout.

7.89 Rock gunnel (Sigouine de roche) - species code 621 (category LR)

Scientific name: [Pholis gunnellus](#)

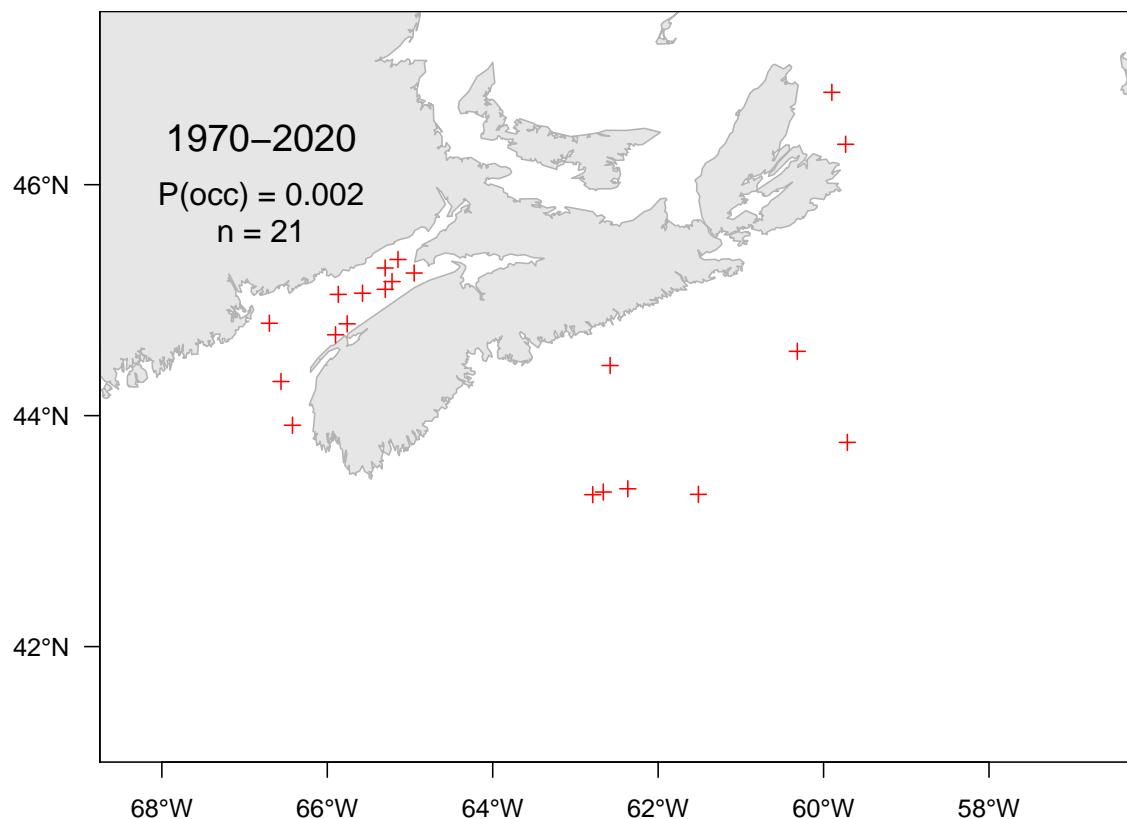

Figure 7.89A. Catch distribution for Rock gunnel.

7.90 Radiated shanny (*Ulvaire deux-lignes*) - species code 625 (category LR)

Scientific name: [Ulvaria subbifurcata](#)

Figure 7.90A. Catch distribution for Radiated shanny.

7.91 Fourline snakeblenny (Quatre-lignes atlantique) - species code 626 (category LR)

Scientific name: [Eumesogrammus praecisus](#)

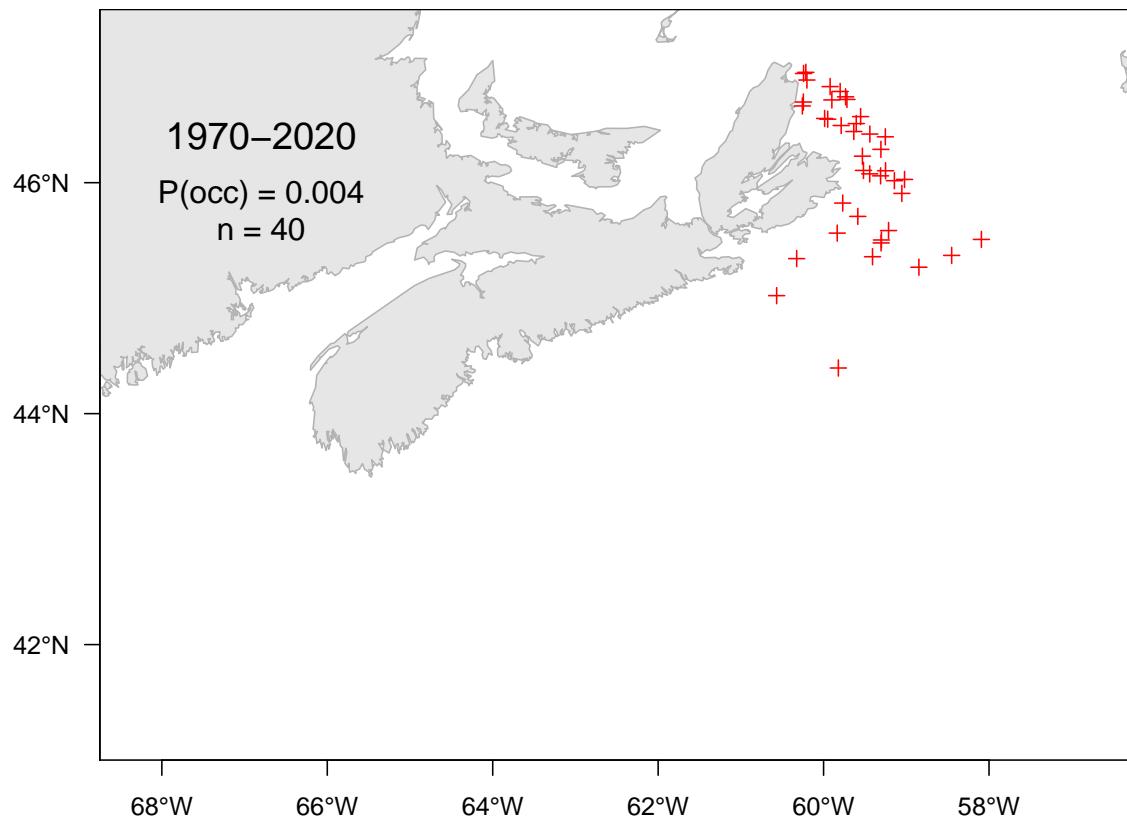

Figure 7.91A. Catch distribution for Fourline snakeblenny.

7.92 Wrymouth (Terrassier tacheté) - species code 630 (category LR)

Scientific name: [Cryptacanthodes maculatus](#)

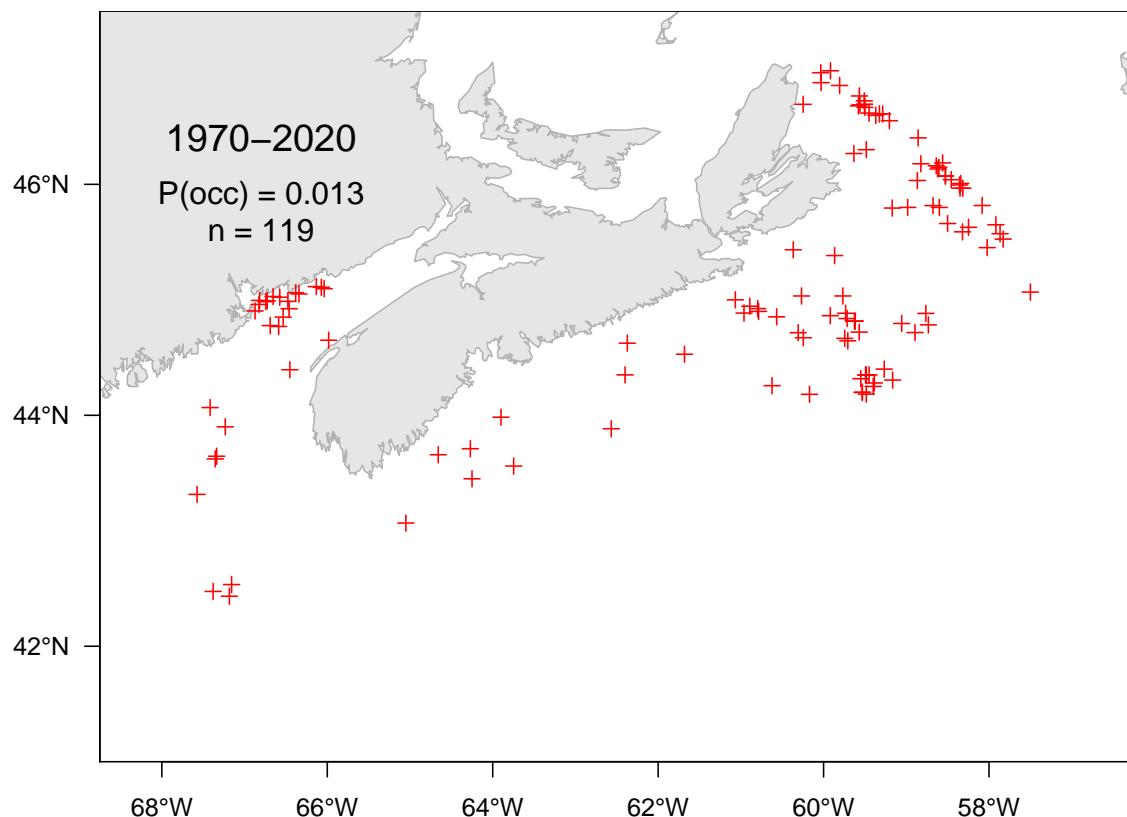

Figure 7.92A. Catch distribution for Wrymouth.

7.93 Spotfin dragonet (Dragonnet tacheté) - species code 637 (category LR)

Scientific name: [Foetorepus agassizii](#)

Figure 7.93A. Catch distribution for Spotfin dragonet.

7.94 Arctic eelpout (*Lycodes arctique*) - species code 641 (category LR)

Scientific name: [Lycodes reticulatus](#)

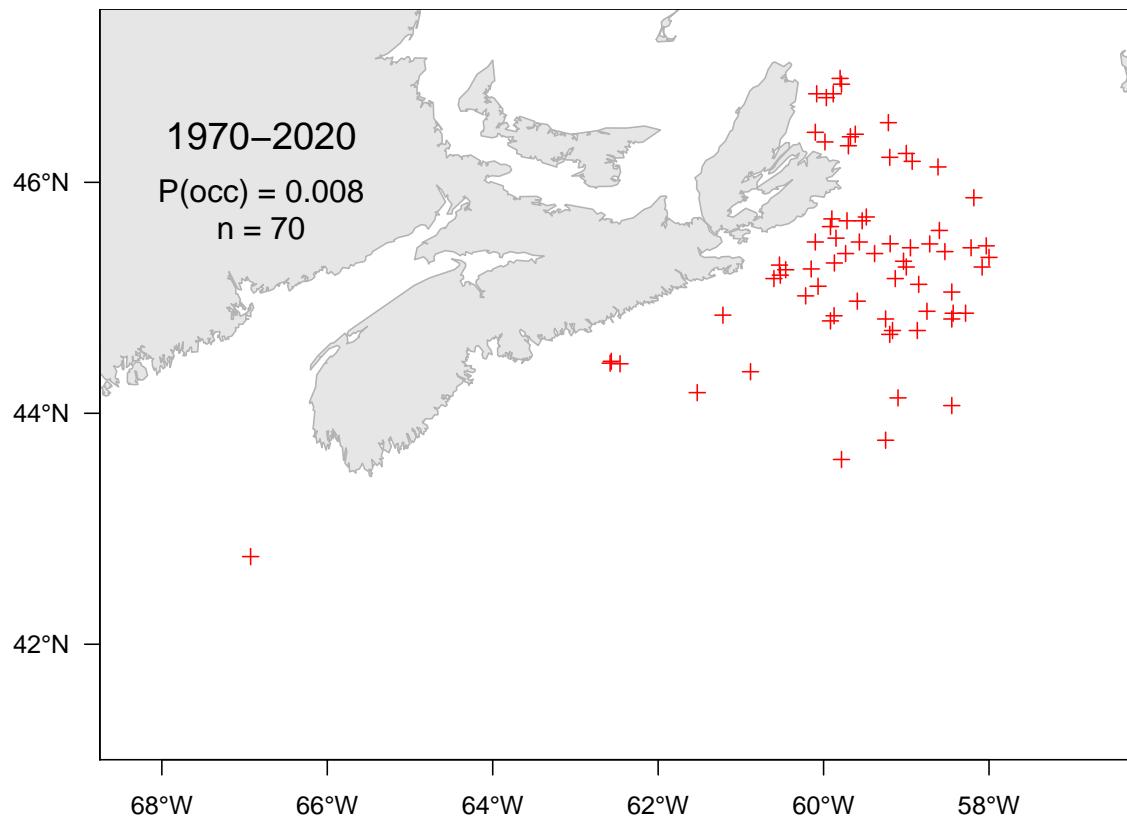

Figure 7.94A. Catch distribution for Arctic eelpout.

7.95 Atlantic soft pout (*Molasse atlantique*) - species code 646 (category LR)

Scientific name: [Melanostigma atlanticum](#)

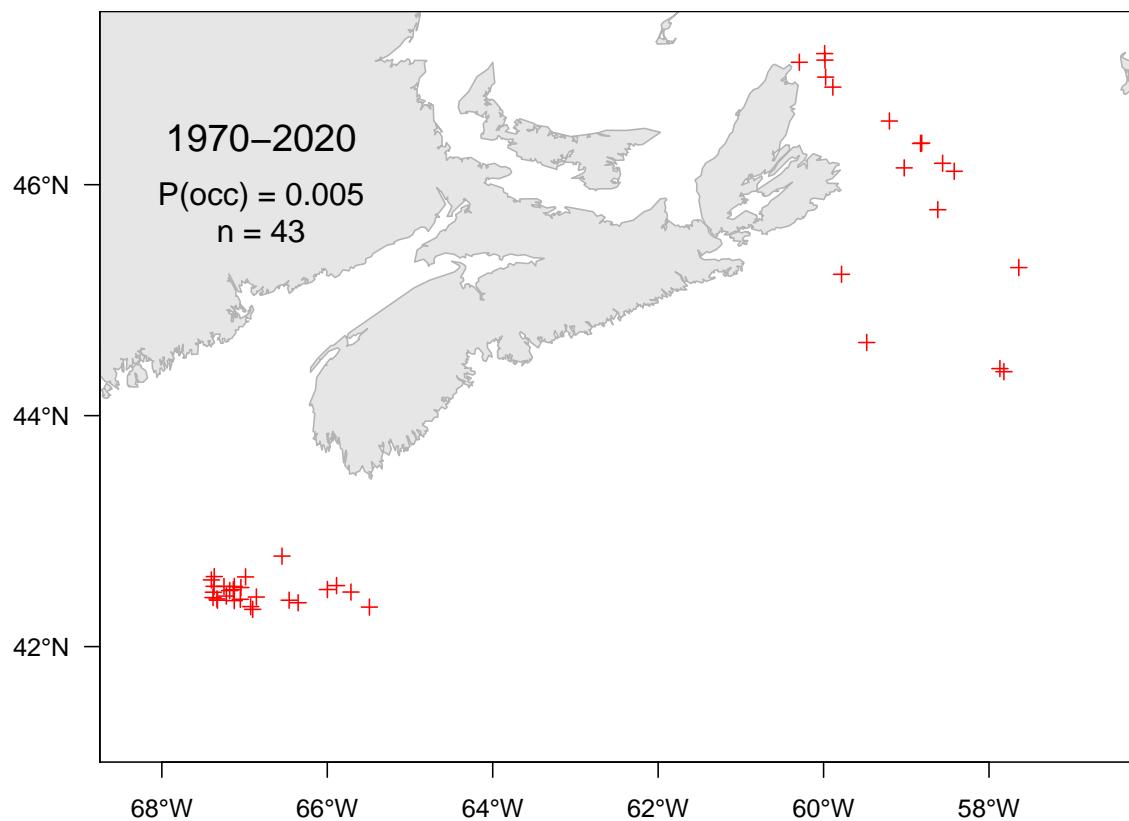

Figure 7.95A. Catch distribution for Atlantic soft pout.

7.96 Silvery John dory (Saint Pierre argenté) - species code 704 (category LR)

Scientific name: [Zenopsis conchifer](#)

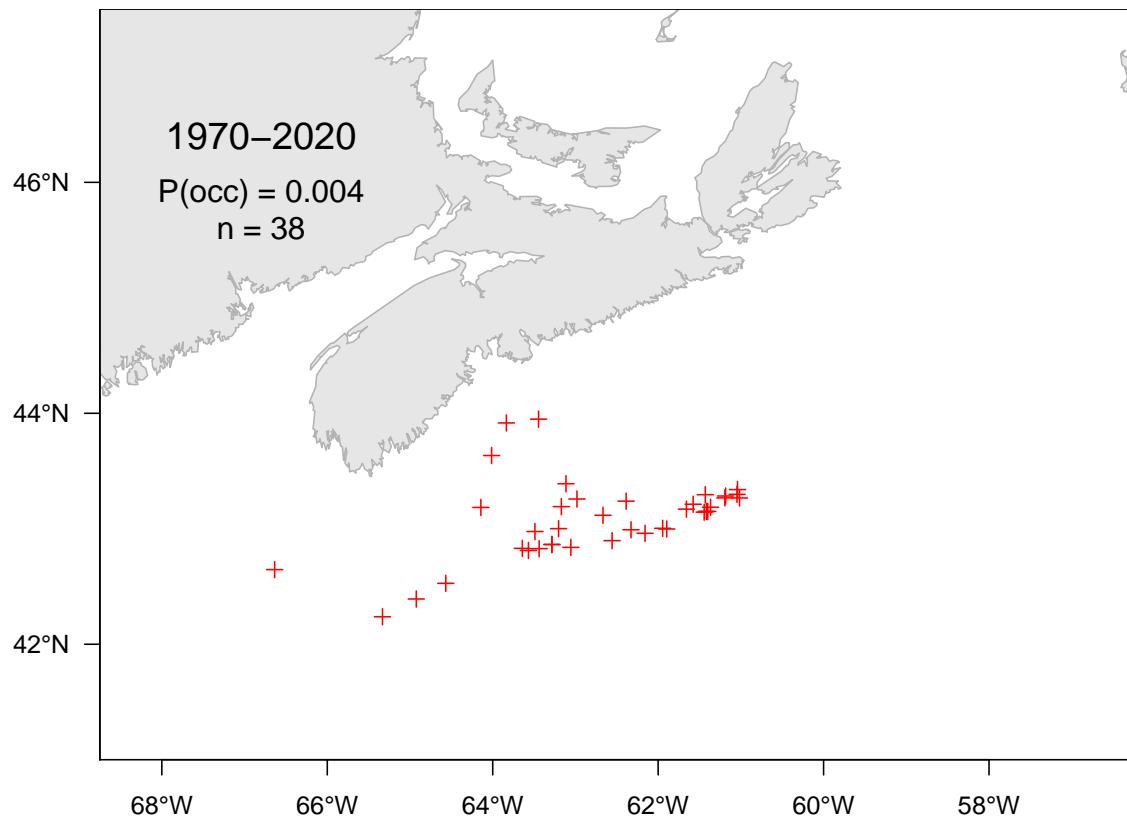

Figure 7.96A. Catch distribution for Silvery John dory.

7.97 White barracudina (*Lussion blanc*) - species code 712 (category LR)

Scientific name: [Arctozenus risso](#)

Figure 7.97A. Catch distribution for White barracudina.

7.98 Atlantic saury (Balaou atlantique) - species code 720 (category LR)

Scientific name: [Scomberesox saurus](#)

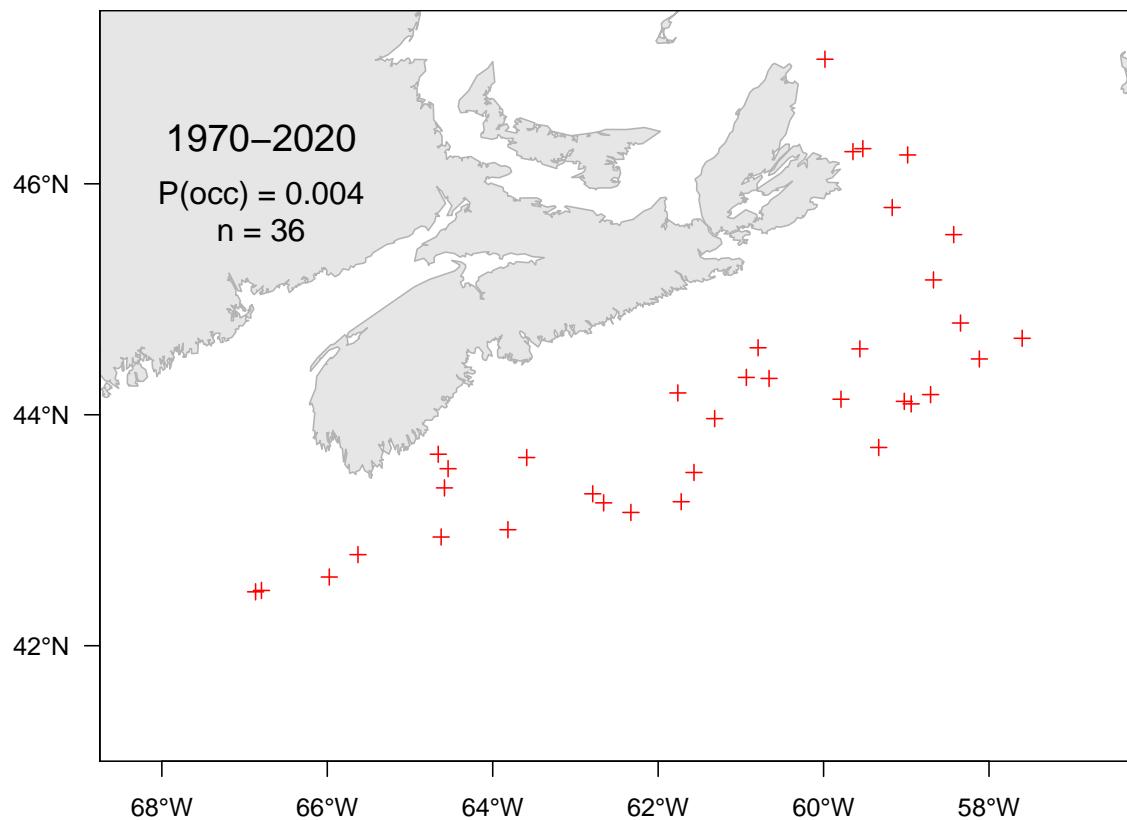

Figure 7.98A. Catch distribution for Atlantic saury.

7.99 Hatchetfishes (Haches d'argent) - species code 741 (category LR)

Scientific name: [Sternopychidae](#)

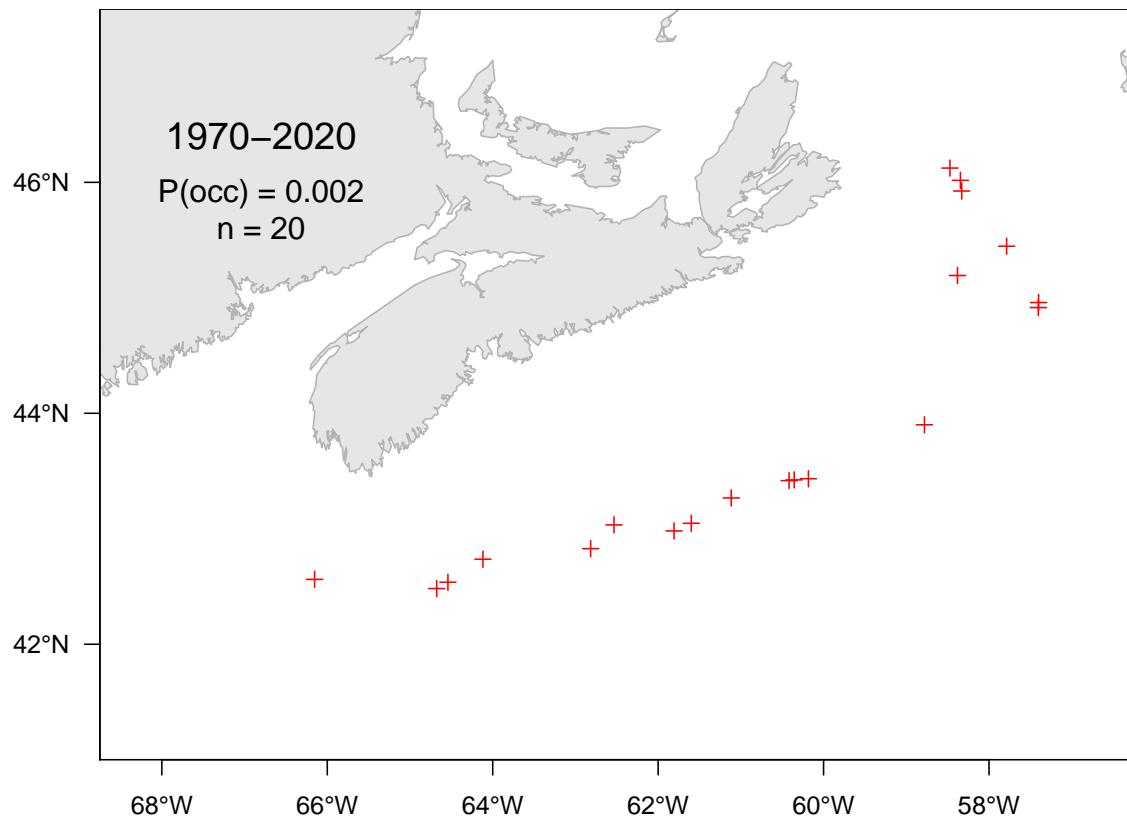

Figure 7.99A. Catch distribution for Hatchetfishes.

7.100 Atlantic batfish (*Malthe atlantique*) - species code 742 (category LR)

Scientific name: [Dibranchus atlanticus](#)

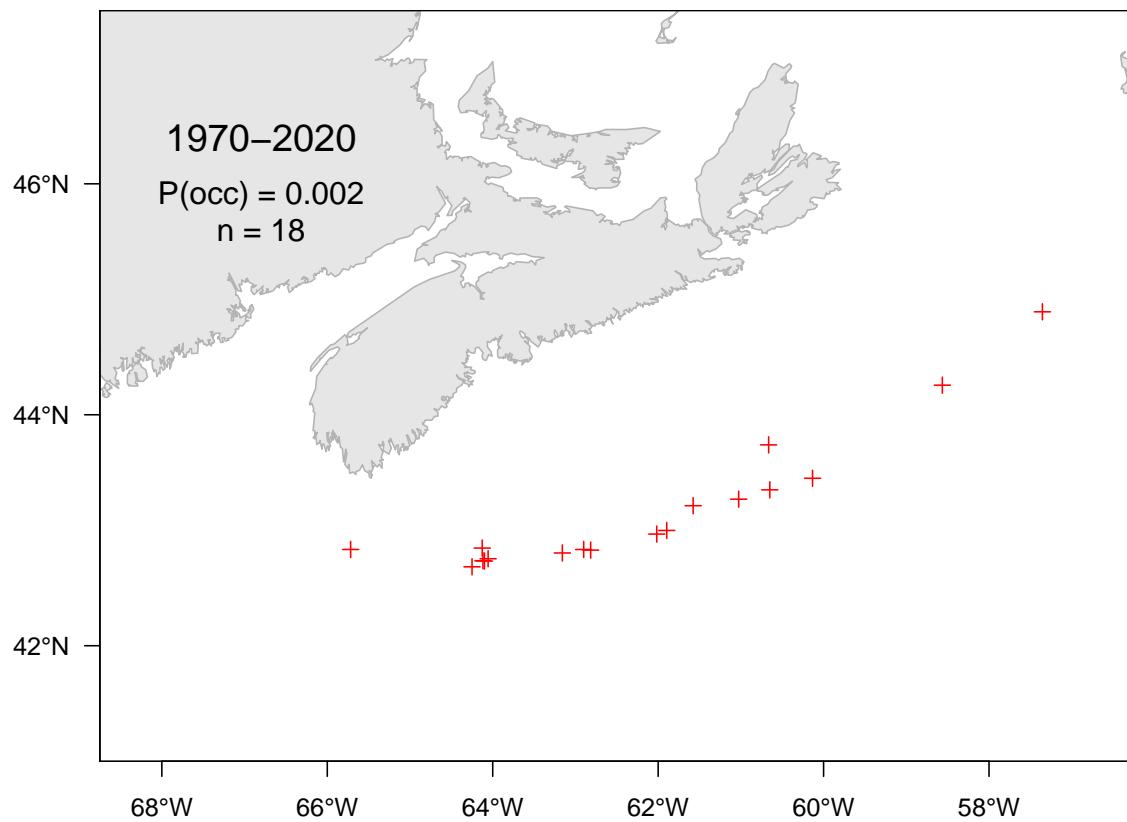

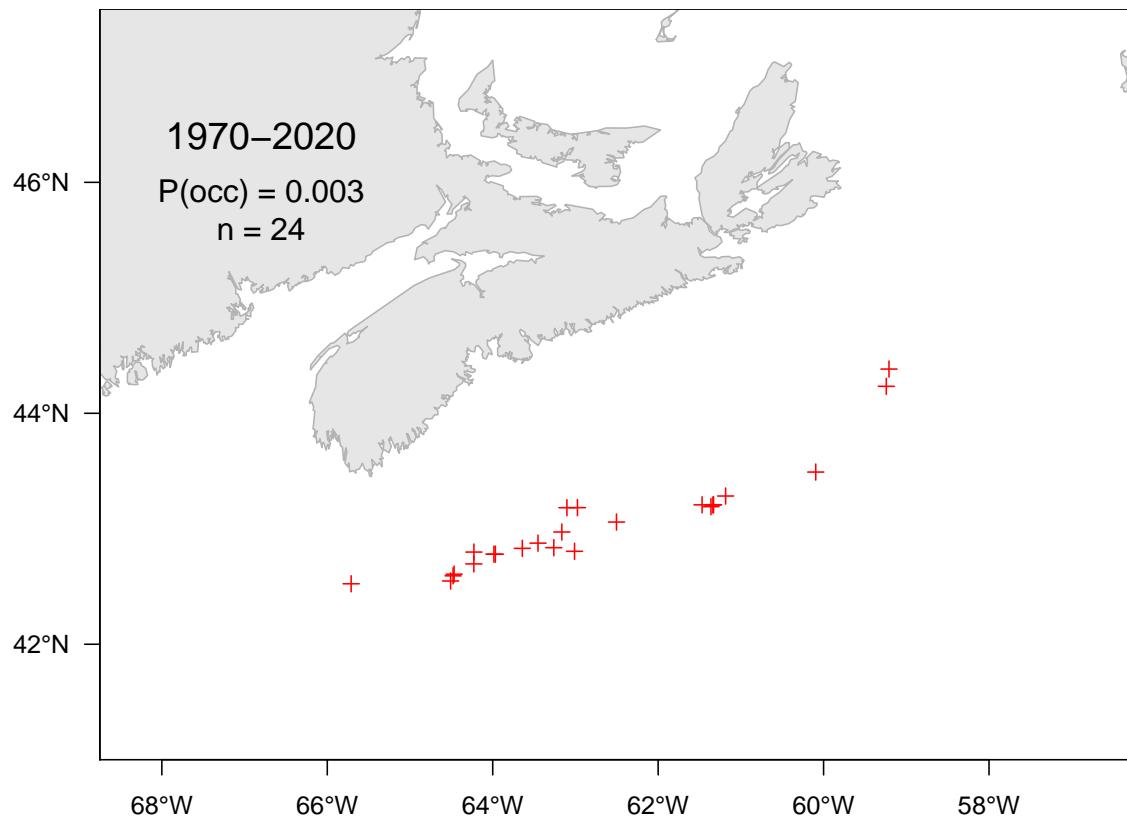

Figure 7.100A. Catch distribution for Atlantic batfish.

7.101 Spottedfin tonguefish (Langue fil noir) - species code 816 (category LR)

Scientific name: [Symphurus diomedeanus](#)

7.102 Black dogfish (Aiguillat noir) - species code 221 (category LR)

Scientific name: [Centroscyllium fabricii](#)

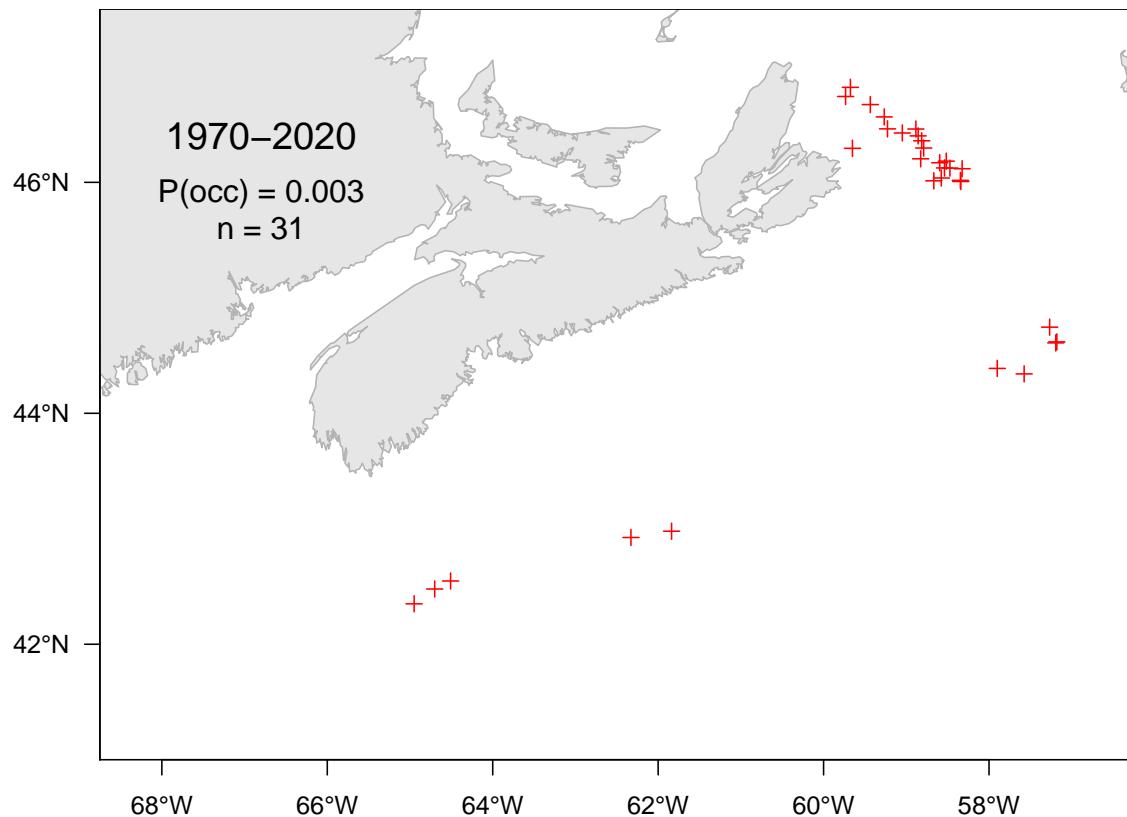

Figure 7.102A. Catch distribution for Black dogfish.

7.103 Longfin inshore squid (*Calmar totam*) - species code 4512 (category LR)

Scientific name: [Doryteuthis pealeii](#)

Figure 7.103A. Catch distribution for Longfin inshore squid.

7.104 Red deepsea crab (Crabe rouge) - species code 2532 (category SR)

Scientific name: [Chaceon quinquedens](#)
